The Compendium of Studies of Tax-Exempt Organizations, Volume 3, 1989-1998 presents information from studies on tax-exempt, nonprofit organizations. Included are articles and tables of data on nonprofit charitable organizations (primarily charitable, religious, educational, and health organizations), nonprofit organizations described in Internal Revenue Code sections 501(c)(4)-(c)(9), private foundations, charitable remainder trusts, and unrelated business income of exempt organizations. The data included in the volume cover the time period 1989-1998, although limited historical information dating to 1975 is contained in selected articles. Important issues within the nonprofit sector are discussed, both in previously published *Bulletin* articles as well as papers prepared for publication in other academic journals.

By request, additional unpublished information from each of the studies is available and special tabulations can be produced. Requests for these services should be addressed to Statistical Information Services, Statistics of Income Division, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608. Alternately, it is possible to call the SOI Statistical Information Services Office (202-874-0410). A fee may be charged for some services. See the Products and Services section at the back of the publication for additional information.

Melissa Belvedere and Margaret Riley of the Statistics of Income Division were the technical editors of the *Compendium*. Special appreciation is extended to Gerald Auten and David Joulfaian of the Office of Tax Analysis at the U.S. Department of the Treasury, Linda Lampkin of the National Center for Charitable Statistics at Urban Institute, and Burton Weisbrod of the Department of Economics at Northwestern University for taking part in this endeavor by writing the Foreward. Views expressed in the articles are those of the authors and do not necessarily represent the views of the Treasury Department or the Internal Revenue Service.

^{*}Note: The period cited in the title of this third Compendium volume covers the span of Return Years for which annual Statistics of Income (SOI) studies of exempt organizations were conducted, and results published, since the release of the second volume. However, two articles have been included in the Overview section that contain limited historical data for certain years prior to 1989.

by Gerald Auten and David Joulfaian, Office of Tax Analysis, U.S. Department of the Treasury Linda M. Lampkin, National Center for Charitable Statistics, Urban Institute Burton A. Weisbrod, Department of Economics, Northwestern University

Analyzing Charitable Giving Using SOI Tax Return Data by Gerald Auten and David Joulfaian

tatistics on charitable giving are important in measuring the level of charitable contributions, as well as the size of the non-profit sector. Charitable giving data also reveal trends in the nonprofit sector. In evaluating the effects of tax policy on the level and distribution of giving, as well as the activities of non-profit organizations, such data are vital. However, data on donations and non-profit organizations are relatively scarce in government and private sector statistics. As a result, the data gleaned from Federal tax returns by the Statistics of Income (SOI) Division of the Internal Revenue Service (IRS) often provide the only source of information on the magnitude of charitable and nonprofit activities. SOI's tax data not only provide information on annual receipts of nonprofit organizations and private foundations, but also provide information on contributions by corporations, individuals and estates.

The use of tax data to measure and analyze the size of the non-profit sector has a number of important advantages, as well as a few limitations. SOI's tax data are based on large samples (more than 100,000 returns, in the cases of individual and corporate contributions), and this is an important advantage. In contrast to most non-tax data sources. SOI data sets contain large numbers of observations on wealthy individuals and large corporations, because such individuals and businesses are over-sampled. Tax data are also available on a fairly consistent basis over relatively long time periods. In some cases, such as the estate tax and corporate tax areas, tax data are essentially the only comprehensive sources of statistics. Tax data do have limitations, however. There may be some bias toward the overstatement of donations to the extent that taxpayers overvalue property gifts or claim deductions for money paid to ineligible organizations or for ineligible

Gerald Auten and David Joulfaian are on the staff of the Office of Tax Analysis, U.S. Department of the Treasury

purposes. In addition, some important data are missing from SOI's tax statistics, such as the donations of non-itemizers and the receipts and expenditures of religious organizations.

Annual cross-section samples of Federal tax returns have been used by a number of researchers to examine the responsiveness of individuals to the deduction allowed for contributions. A recurring concern, however, is that annual data may provide a distorted view of contributions, as well as other aspects of taxpaver behavior, such as the realization of capital gains and income measurement. In response to this concern, SOI has constructed a number of panel data sets from individual income tax returns. One early study by Auten and Rudney (1990) used an SOI panel of tax returns for 1971-1975 and found that high-income taxpayers were much more likely to concentrate their giving, while lower and middle-income taxpavers tended to give more stable amounts from year to year. Auten, Clotfelter and Schmalbeck (2000) found similar patterns using an overlap panel of tax returns for 1991-1995.

These findings suggest that annual observations on high-income individuals could provide a misleading picture of both their giving over time and their responses to tax law changes. That is, taxpayers' behavioral responses may differ between the shortand long-term. Panels of tax returns allow us to observe individuals' giving both before and after tax law changes, including any transitory acceleration or delay of income reporting or contributions made. The "natural experiments" from tax law changes allow us to observe changes in individual giving in response to exogenous changes in tax price. Two recent examples of panel studies are those by William Randolph (1995) and Gerald Auten, Holger Sieg and Charles Clotfelter (forthcoming), who employed variants of the 1979 forward tax panel with 10 or more years of data spanning several major tax law changes. Both studies find that charitable contributions respond differently to current (transitory) income and tax price than to the corresponding longrun (permanent) variables, thereby demonstrating the importance of panel data for analysis.

During recent debates that took place about the Federal estate tax and its possible repeal, charitable bequests have attracted considerable attention. While charitable transfers at death represent less than 10 percent of aggregate lifetime giving, they potentially account for a sizeable amount of total giving by the wealthy. A number of researchers have examined Federal estate tax data to measure the response of charitable giving to estate taxation. Beginning in 1982, SOI has provided estate tax data on wealthy decedents for every filing year; year-ofdeath data are available on a tri-annual basis. Available information includes the size and composition of wealth at death, demographic data on the deceased, and the disposition of the estate. Examples of studies that examine estate tax and charitable bequest data include Joulfaian (2000a, 1999, and 1991), Clotfelter (1985), and Boskin (1976).

Several SOI studies have linked information on charitable bequests from estate tax returns to information on lifetime charitable contributions from the income tax returns of the decedents. This is done by matching estate tax returns to the universe of income tax returns filed for the year prior to the date of death. Some of the earliest work was undertaken by Eugene Steuerle (1987), who employed the 1976 Collation Study (CS) to study differences in the pattern of giving during life and at death. This CS data linked estate tax returns of decedents in 1976 to the 1975 income tax returns. Auten and Joulfaian (1996) extended this work by employing the 1982 CS data and found that the estate tax influences lifetime charitable contributions, not just charitable bequests.

A file that matches estate tax returns to income tax panel data is one of the more interesting of SOI's new products. Focusing on the 1987-96 panel of income tax returns, SOI extracts the estate tax re-

turns of panel members as they die. Thus, we observe not only the pattern of lifetime contributions, but also the patterns of wealth disposal at death. In a recent paper, Joulfaian (2000b) employed this matched panel to study how the wealthy allocate their transfers between lifetime contributions and bequests, as well as how estate taxation affects charitable giving.

The federal taxation of corporate income and charitable giving by corporations is an area that seems to have received much less attention. In part, this can be explained by the limited number of major changes in corporate tax provisions that affect contributions. The lack of tax law changes makes it difficult for researchers to examine how taxes influence corporate giving. Given that the tax rate is likely to be determined by profits or income, it is not an easy task to separately identify the effects of income and taxes (price). Beginning in 1991, however, SOI began capturing the contributions reported by S corporations. Because these entities are not subject to a corporate level tax, Carroll and Joulfaian (1997) used them as a control group in examining the effects of the corporate income tax.

In conclusion, data on charitable transfers derived from individual, corporate, and estate tax returns are instrumental in analyzing the effects of tax law changes on giving. These data are useful for scholarly research and for purposes of making revenue estimates and evaluations of policy proposals. Indeed, tax records often provide the only source of information to interested analysts. Without SOI's efforts in constructing and maintaining these data, it would be very difficult to gauge the effects of taxes and make informed policy recommendations. With over \$100 billion in annual transfers, the importance of such studies and the necessity of SOI data cannot be understated.

National Center for Charitable Statistics and SOI Collaboration on Nonprofit Organization Research by Linda M. Lampkin

In the nine years since the last volume in this series, the changes that have taken place in the availability of data on nonprofit organizations for researchers, particularly in the past three years, have been dramatic. The data made available and the work completed by the Statistics of Income (SOI) staff have helped scholars and policymakers to better understand the nonprofit sector and its myriad activities and contributions to American society. The articles and the papers included here illustrate the great advances in the development of information on this sector.

The National Center for Charitable Statistics (NCCS), now a program of the Center on Nonprofits and Philanthropy at the Urban Institute, has worked with SOI for nearly two decades. Through this collaboration. NCCS has been able to use the data files that are the sampling frames for the annual SOI studies of Internal Revenue Code Section 501(c)(3) organizations and construct a dataset for in-depth analysis of the sector by researchers. This database contains about 60 financial variables for all Internal Revenue Service Form 990 filers (those that have more than \$25,000 in annual gross receipts), as compared to the 300 variables analyzed in the SOI sample. NCCS checks the data, incorporates corrections from the SOI Form 990 study sample, and checks and completes the classification of all organizations in the file. This comprehensive dataset (called NCCS Core Data) is produced annually and is available to researchers through NCCS. Using this information, NCCS published its first book, State Nonprofit Almanac 1997: Profiles of Charitable Organizations, providing a level of detail and precise definitions on the sector available for the first time. These profiles are now updated annually and available on the NCCS website (nccs.urban.org).

Linda M. Lampkin is Program Director of the National Center for Charitable Statistics at the Urban Institute's Center on Nonprofits and Philanthropy A recent NCCS-SOI project also helped ensure the quality of the coding of the organizations in the SOI Form 990 study sample. SOI had long used the National Taxonomy of Exempt Entities (NTEE) to group charities by purpose, type, and major function. This classification system was developed by NCCS, with the guidance of leading nonprofit scholars and practitioners. By 1998, the Internal Revenue Service was using three systems — the Standard Industrial Classification (SIC) system, supplemented with a system of Activity Codes (to better describe the varied activities of the charities), and NTEE codes to classify nonprofit organizations.

When the SIC coding system was replaced by the North American Industry Classification System (NAICS) in 1997, the Service seized the opportunity to simplify and consolidate its coding. NCCS was asked to create NTEE-Core Codes (NTEE-CC), a more concise and easier-to-use version of NTEE. This new version eliminated little-used categories, created full definitions, and developed rules for coding to ensure higher consistency, as well as aligning the system with NAICS. The expertise and input of the SOI Form 990 study editors at IRS's Ogden Submission Processing Center in Utah were invaluable as NCCS worked to develop the new NTEE. SOI staff also are part of the NTEE Oversight Committee that made the final decisions on the changes, and they participate in the on-going maintenance of the system.

Now the Service uses only NTEE-CC to code tax-exempt organizations as they apply for tax-exempt status, and that code is electronically cross-walked into a NAICS classification. Government reports are now completed using the required NAICS classifications, but the more comprehensive portrait of the sector is also available using the NTEE-CC.

With a revision of the NTEE-CC came an opportunity for NCCS to work with SOI to verify the classifications of the 1994 Form 990 SOI study sample (Stengel, Lampkin, and Stevenson 1999 and in this volume). This project served to permanently improve both the codes and the system for coding for the future. Codes for large organizations that were

difficult to classify were hard-coded, so that they would never need to be classified again. Also, an analysis of common pitfalls was used to develop prescriptive rules to increase the accuracy and consistency of classification. One of the NCCS findings was that the SOI editors were producing quality codes using a system that, at the time, was less than ideal

At the conclusion of the verification project, about 88 percent of the file records were deemed as coded with "high or fair confidence." This is a big achievement for a sector that formerly used codes that were based only on information from one Form 990 or all too often, just the organization name. For the larger organizations (with assets of \$10 million or more), 93 percent were coded with "high or fair confidence." A detailed description of the project is included in this compendium. We are proud that our work with SOI has resulted in the best classified and most completely documented dataset of charities ever assembled.

A second project that has had a phenomenal impact on the availability of nonprofit data is cosponsored by NCCS and Philanthropic Research, Inc. (PRI, with its GuideStar web site) and involves collaboration with IRS staff in SOI, the Tax Exempt/ Government Entities (TE/GE) Division, and the

Submission Processing Center in Ogden. The Forms 990 and 990-PF received in Ogden are scanned and stored on CD-ROMs or tapes and sent to NCCS/ PRI. Well over 20 million pages of the forms and their attachments have been scanned as you read this. The images are then made available on a web site (at www.guidestar.org or www.nccs.urban.org) for instant and easy access. The forms have become a valuable resource for researchers and policymakers, as well as potential donors and the general public. The nonprofits themselves are learning that the Form 990 on the web can be used as a communication tool as they comply with the requirements for disclosure of this information. This increased scrutiny has worked to increase the quality of reporting by nonprofits, as a Form 990 may be a first introduction to potential donors.

Only a few years ago, nonprofit researchers spent most of their time, money, and energy just collecting data and checking their quality and usefulness. Now easy access makes the information truly widely available. The giant steps that have been taken to increase the quality and quantity of data on charities would not have happened without the support and cooperation of SOI and the Service, and we look forward to future collaboration.

Research on Nonprofit Organization Behavior: The SOI Data by Burton A. Weisbrod

As the nonprofit sector has grown, so has the importance of understanding nonprofit organization behavior. The data made available by the Statistics of Income (SOI) Division of the Internal Revenue Service (IRS) are valuable aids for research, making use of information from IRS Forms 990, 990-PF, and 990-T returns for thousands of individual nonprofit organizations. Aided by the industry classifications of the National Taxonomy of Exempt Entities (NTEE), these data permit identification and analysis of behavioral patterns within specific industries – e.g., health, education, and anti-poverty activities – and over time.

Form 990 informational returns are required to be filed by all nonprofit organizations, except for religious organizations, having gross revenue in excess of \$25,000. Data from Form 990 are public information, available in the annual SOI study samples as well as on the Web at www.guidestar.org, and directly from each nonprofit organization. The Form 990-T tax return, by contrast, is required only if a nonprofit has \$1,000 or more of gross "unrelated business income" (UBI) that is, income from activities that are not substantially related to the nonprofit's tax-exempt mission. Information for specific organizations reported on these returns by law cannot be disclosed to the public. For analytic purposes, the SOI Division has developed annual samples of Form 990-T unrelated business income tax (UBIT) returns from which it publishes aggregate statistics. In addition to independently selected Forms 990-T, the SOI sample also includes any Form 990-T tax return filed by an organization whose information return was selected for the SOI sample of Forms 990/EZ.

Through an agreement with the IRS, which allows academic researchers to access otherwise nondisclosable tax return data from SOI samples

Burton A. Weisbrod is a John Evans Professor of Economics and Fellow, Institute for Policy Research, Northwestern University (and requires strict accordance with disclosure provisions pertaining to taxpayer confidentiality), I analyzed one element of nonprofit organization behavior that has puzzled students of nonprofit organizations and tax policy: how to explain the SOI findings that the aggregate profit reported on the more than 30,000 Form 990-T UBIT returns is negative year after year (Riley 1995, 1996, 1997, 1998, 1999, and 2000, and in this volume). Since, by definition, UBI involves activities that are unrelated to the nonprofit's tax-exempt mission, why would a nonprofit undertake such an activity unless it generated profit for crosssubsidizing the mission? Research now in progress (by Weisbrod) is examining a large data set of matched Forms 990 and 990-T returns to see whether there is evidence that much of the explanation rests on the use of Generally Accepted Accounting Principles for allocating joint costs. Earlier research produced evidence, though from relatively small samples of hospitals, colleges, and museums, that is consistent with the hypothesized cost-allocation explanation. The true profit on unrelated business activities in all three industries, if profit is measured by the difference between revenue and incremental costs, is significantly greater than the reported profit, which reflects allocation of joint costs that contribute to both related and unrelated activities. (See Cordes and Weisbrod 1998, and elsewhere in this volume.) The new research extends the earlier work to larger samples, more industries, and multiple years, to identify the forms of cost-shifting.

In addition to the question of how costs are allocated between the untaxed, mission-related, activities and the taxed, unrelated business activities, another research question is how the choice of cost categories can affect a nonprofit organization's revenue – particularly from donations ("contributions, gifts, and grants" – CGG). When expenses are reported as for "management" rather than for "fundraising," the nonprofit may be seen by donors as having a low fundraising ratio. This might increase donations, in light of the growing "guidance" that prospective donors are receiving to give to organizations with low fundraising percentages. Changes

over time in the reporting of fundraising costs would pose problems for researchers.

The SOI annual samples of Form 990 data present an unparalleled, though imperfect, source of research data on behavior of individual nonprofit organizations over time. The data are currently available for every IRS reporting year between 1982 and 1998, except for 1984. Segal and Weisbrod (1998 and included in this volume) utilized these data, creating a panel of nonprofits that were in the SOI samples for multiple years—primarily the larger organizations, with assets of \$10 million or more. The objective was to study the extent to which revenues from CGG and from sales ("program service revenues") are substitutes, complements, or independent revenue sources. The SOI data permit analysis of individual organization behavior over time and in each of a number of industries. We studied the effects of an exogenous change in CGG in one year on an organization's program service revenues in subsequent years.

In another study of nonprofits' revenue sources and their interdependencies, Okten and Weisbrod (2000, and in this volume) also took advantage of the multiple years of SOI data. We focused on the forces affecting nonprofit organization revenues from private CGG, examining the influences of such variables as the organization's age, the level of its fundraising expenses (notwithstanding their limitations as noted above), and revenue from other sources such as government grants and program service revenues in prior years. The analyses covered a number of industries including hospitals, colleges, museums, scientific research organizations, libraries, and organizations serving the poor.

The SOI Division performs a valuable function for researchers studying the financing and expenditure policies of nonprofit organizations. By making available, electronically, detailed data on each of thousands of nonprofit organizations over time, and by encouraging analysis of the data, the SOI continues its tradition of advancing public policy through research.

Introduction

n the United States, charities play an extremely important part in the lives of citizens, as well as being an important economic force. According to a 1999 survey conducted by the Independent Sector, 70.1 percent of households contributed to charities in 1999, and the average household contribution to charity was \$1,075 [1]. Seventy-six percent of citizens reported feeling that nonprofit organizations played an important role in their own communities [2]. Because the nonprofit sector plays such a large role in the U.S. economy, detailed study and analysis of this "third sector" is vital. The Statistics of Income (SOI) data show that the number of nonprofit charitable organizations filing information returns with the Internal Revenue Service (IRS) more than doubled during the 20-year period between 1975 and 1995, and their real assets and revenues more than quadrupled [3] [4].

In addition to being a significantly large component of the American economy, the nature of the nonprofit sector is changing. A report by the Kellogg Foundation examined several new characteristics of the nonprofit sector which have emerged in the late twentieth century. Specifically, the report found three new waves of change. First, the "innovations of social entrepreneurs and the organizational models they are creating require new perspectives and responses from traditional philanthropy" [5]. Second, "pressures from an active and vocal civil society, along with enlightened corporate leadership are...creating new opportunities and incentives for the commercial sector to partner with philanthropies, other nonprofits and government" [6]. Last, "belief in the value of wealth creation in addressing social change along with the principles of venture capital investment is influencing the practice of emerging philanthropists" [7]. Such important shifts in a large sector of the American economy makes critical the financial information pertaining to exempt organizations [8]. This Compendium of Studies of Tax-Exempt Organizations provides a comprehensive picture of the financial characteristics of tax-exempt organizations, allowing scholars access to the wealth of information gathered by The Statistics of Income Division.

Volume 3: A Tradition of Exempt-Organization Data Publishing

The Compendium of Studies of Tax-Exempt Organizations, Volume 3, 1989-1998, is a comprehensive source of SOI data and information concerning the nonprofit sector. SOI conducts annual studies of certain types of tax-exempt organizations, using samples of returns filed with the IRS. Analyses of study results, along with statistical tabulations, are published annually in the *SOI Bulletin*. Volume 3 of the Compendium consolidates all data and articles previously published by SOI, covering various Reporting Years between 1989 and 1998 [9].

The earliest collection of SOI data on nonprofit charitable organizations and private foundations, classified as tax-exempt under Internal Revenue Code section 501(c)(3), appeared in the first volume of the Compendium, which presented articles published from 1974 through 1987. The Compendium, Volume 2, was more comprehensive. In addition to data on section 501(c)(3) organizations, it contained information on charitable bequests and organizations exempt from tax under sections 501(c)(4) through (c)(9). These sections of the Code describe social welfare organizations; membership societies; and civic, social, recreational, and fraternal organizations.

SOI plays an important role in fostering research on tax-exempt organizations by sharing its data and collaborating with other researchers inside and outside of Government. In addition to SOI articles, Volume 3 contains papers authored by non-SOI scholars who have used SOI data for research on various aspects of the nonprofit sector.

Volume 3 of the Compendium organizes the articles and papers on tax-exempt organizations into the following sections:

- Overview of Tax Exempt Sector Research
- Charities and Other Tax Exempt Organizations
- Private Foundations and Charitable Trusts
- Unrelated Business Income Tax
- Charitable Remainder Trusts
- Related Papers on Nonprofit Research Using SOI Data

Of the articles included in the Compendium, Volume 3, most have appeared in various quarterly editions of the Statistics of Income (SOI) Bulletin. Some were prepared for publication in other SOI publications and academic journals. A listing of references for the articles and papers included in this volume, in addition to references cited therein, appears in the "References" section.

Areas of Focus Within the Nonprofit Sector

The first two articles in The Compendium, Volume 3, provide a historical overview of nonprofit research done at SOI. Skelly's article focuses on all nonprofit research done, while that written by Meckstroth and Arnsberger deals mainly with research on section 501(c)(3) organizations filing Forms 990, 990-EZ, and 990-PF. In addition to the two articles presenting historical data, the "Overview" section includes an article describing the methodologies used to select each of the SOI exempt-organization return samples

In the section entitled "Charities and Other Tax Exempt Organizations," data presented were gathered from Forms 990, Return of Organization Exempt from Income Tax, and 990-EZ (the shortform version of the return) for Reporting Years 1989 through 1998. These articles include information on organizations such as schools, hospitals, public charities, and certain religious organizations, as well as social welfare organizations, civic and business leagues, labor and agricultural organizations, recreational and social clubs, fraternal beneficiary associations, and voluntary employees' beneficiary associations. Reporting Year 1997 and later years' data incorporate two significant additions to the annual studies: information regarding lobbying expenditures by 501(c)(3) organizations, as well as a worksheet reconciling revenue and expenses on an organization's financial statements with the amounts it reports on Form 990.

The third section, "Private Foundations and Charitable Trusts," presents data collected from Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation, for Reporting Years 1991 through 1997. Rather than operate their own charitable programs, many private foundations provide grants to other nonprofit organizations, com-

munities, and individuals. These grants provide financial support to programs in the areas of the arts, humanities, education, health, human services, and environmental protection, among others. In addition to information on private foundations, this section includes information on "nonexempt charitable trusts" classified under Code section 4947(a)(1).

This is the first Compendium volume to include annual information from Form 990-T, *Exempt Organization Business Income Tax Return*. Data are presented for Tax Years 1991 through 1997, based on samples of returns with reported gross "unrelated business income" (UBI) of \$1,000 or more. Generally, a Form 990-T tax return is required to be filed by an organization, ordinarily exempt from tax, to report income produced from activities that are "regularly carried on" and "are not substantially related" to its tax exempt purpose. Beginning with Tax Year 1993, the sample included all Forms 990-T filed by any organizations whose annual information returns were selected for the Form 990 SOI sample, in addition to other Forms 990-T selected independently.

Also included in this Compendium volume is an article on charitable remainder trusts for Reporting Year 1998, which was published in the Winter 2000-2001 issue of the SOI Bulletin. Data for the 1998 study of charitable remainder trusts were collected from Form 5227, Split Interest Trust Information Return. Form 5227 is filed by trusts having both charitable and noncharitable beneficiaries, as described in section 4947(a)(2) of the Internal Revenue Code. The most recent split-interest trust data published by SOI prior to the 1998 report were for Reporting Year 1979 [10]. Charitable remainder trusts pay either a fixed dollar amount or a percentage of assets annually to one or more non-charitable beneficiaries. These payments may be for a specified number of years or for the life of the beneficiary. Upon termination of the payments, the remaining interest is transferred to a charitable organization.

The final section contains additional articles and papers on topics related to the nonprofit sector. These topics cover corporate and individual philanthropy, tax-exempt private activity bonds, the classification of nonprofit charitable organizations by the National Taxonomy of Exempt Entities, and the commercialization of nonprofit organizations.

Statistical Research at SOI

Since 1917, the Statistics of Income Division within IRS has produced annual financial statistics which are reported on various returns filed with the IRS. SOI produces financial statistics on individuals, domestic corporations, U.S. corporations with foreign activities, wealth and estates, and tax exempt organizations. Data and descriptive articles regarding these subject areas are published in various SOI publications, which are detailed at the back of this volume in the "SOI Products and Services" section.

Data for SOI is developed using samples of all tax returns filed with the Internal Revenue Service. Specifically, tax-exempt organization data are collected from the following forms:

- Form 990, Return of Organizations Exempt from Income Tax
- Form 990EZ, Short Form: Return of Organi zations Exempt from Income Tax
- Form 990-PF, Return of Private Foundation (of Section 4947(a)(1) Trust Treated as a Private Foundation)
- Form 990-T, Exempt Organization Business Income Tax Return
- Form 5227, Split-Interest Trust Information Return

For a general discussion of SOI sampling procedures and data limitations, there is an article entitled "SOI Sampling Methodology and Data Limitations," found in the Appendix to this volume. As mentioned above, a more detailed description of sampling for the various exempt organizations studies is included in the "Overview" section. Additionally, articles published in the SOI Bulletin each contain a section dedicated to "Data Sources and Limitations."

Looking Toward the Future: Upcoming Plans for Tax Exempt Data

SOI has recently engaged in a project that greatly improves the accessibility of nonprofit data by scanning and storing Forms 990 and 990-PF on CD-ROMS or tapes. This project, which has been co-sponsored by the National Center for Charitable Statistics (NCCS), requires collaboration with IRS staff in SOI, the Tax Exempt/Government Entities (TE/GE) Division, and the Submission Processing

Center in Ogden, UT. To date, more than 20 million pages of the forms and their attachments have been scanned.

The SOI studies of charitable remainder trusts for Reporting Years 1998 and 1999 cover only two types of split-interest trusts filing Form 5227. These are charitable remainder annuity trusts and charitable remainder unitrusts. Beginning with Reporting Year 2000, the SOI split-interest trust studies will be expanded to include all types of organizations filing Form 5227 – charitable remainder trusts, pooled income funds, and charitable lead trusts.

SOI Products and Services

SOI data are available in both electronic format and printed publications. Microdata for exempt organizations (Forms 990 and 990-PF) are available from SOI, as well as the National Center for Charitable Statistics. The data, which contain identifiable organization records, can be made available because of the Federal requirement for these organizations to make their IRS information returns available to the public. To request any of the data or microdata CD-ROM's offered by SOI, contact the Statistical Information Services Office:

Statistical Information Services (202) 874-0410
Statistics of Income Division (202) 874-0964 (fax)
Internal Revenue Service sis@irs.gov(e-mail)
P.O. Box 2608
Washington, DC 20013-2608

Scanned images of Forms 990 and 990-PF filed by section 501(c)(3) organizations are also available from the internet sites of Philanthropic Research, Inc. (PRI) and the National Center for Charitable Statistics (NCCS). The World Wide Web addresses for PRI and NCCS are as follows:

Philanthropic Research, Inc. www.guidestar.org National Center for Charitable Statistics www.nccs.urban.org

Additionally, SOI's Internet site offers over 800 files of both SOI and non-SOI products and services.

Files presenting tables, articles, information about SOI products and services, IRS Annual Data Book tables, Compliance Research projections, and non-profit Master File microdata records are currently available. The SOI World Wide Web address is: http://www.irs.gov/tax_stats.

by Daniel F. Skelly

ax-exempt organizations represent a significant and growing sector within the U.S. economy [1]. For 1990, the revenues and expenses of tax-exempt organizations each represented 10 percent of the gross domestic product (GDP), up from less than 6 percent for 1975 (Figure A). Between 1975 and 1990, assets of tax-exempt organizations increased in real terms by over 150 percent, while revenues increased by over 227 percent. This is in comparison to a growth in real GDP of 52 percent over the same period.

For 1990, there were approximately 1.4 million tax-exempt, nonprofit organizations in the "independent sector." Of these, 350,000 were churches, synagogues and other religious organizations that, although tax-exempt, were not required to register or file tax returns with the Internal Revenue Service (IRS). Of the approximately 1 million organizations registered as tax-exempt with the IRS, almost 455,000 were "nonprofit charitable organizations," exempt under Internal Revenue Code section 501(c)(3), that engaged in educational, research, scientific, religious, philanthropic, and other charitable activities [2]. The remaining organizations encompassed a vast array of voluntary and philanthropic institutions that provide a wide variety of services to the American population. These include, among others, civic leagues and social welfare organizations, business leagues, recreational and social clubs, fraternal and voluntary employees' beneficiary associations, and Federal credit unions.

Has the growth in the nonprofit sector been induced by cutbacks in Federal social programs? How has the mix of contributions received, program fees, investment income, and commercial income from unrelated activities fueled the growth in the sector? What types of organizations have exhibited the biggest growth rates and why? What role has the Government played in the growth? What policy decisions have contributed to the expansion of the sector? Tax policy issues like these can be addressed using data collected from Federal information and tax returns filed by tax-exempt organizations.

Daniel F. Skelly is currently Acting Director, Statistics of Income. This article was originally published in Voluntas, Volume 4, Number 4, International Journal of Voluntary and Non-Profit Organizations, Thematic Issue: The Not-For-Profit Sector in the National Accounts and Related Systems, Manchester University Press, Manchester, United Kingdom, 1993, and is reprinted here with permission of the National Academy of Sciences, Washington, DC. The article has been slightly edited and updated for republication in the Statistics of Income Bulletin.

Data from Federal information and tax returns of taxexempt organizations are available from several sources [3]. First, the Statistics of Income (SOI) organization of the IRS, using sample data, conducts studies of tax-exempt, nonprofit organizations. Income statement, balance sheet, and other financial data, as well as a great amount of nonfinancial information, are collected in these SOI studies. The data are subject to comprehensive testing and correction procedures to ensure that they are of high quality. Sec-

From 1975 to 1990, the growth of taxexempt organizations substantially exceeded the growth of the national economy. ond, the IRS collects, for administrative purposes, selected data items from all tax-exempt organization returns filed. Only limited information (for example, total assets and total receipts) is available to the public from this administrative file. These

data are subject to limited testing; thus, taxpayer filing errors may not always be corrected. Finally, current information on tax-exempt organizations can be gathered from the actual returns filed. Copies of the publicly-disclosed tax and information returns can be obtained from the IRS district office where the organization is located or through public inspection at the organization itself.

The primary purposes of this article are to document the growth in the nonprofit sector relative to the economy as a whole and to describe ongoing SOI studies of nonprofit organizations [4]. Readers interested in the specific types of information on nonprofits available through SOI will appreciate the Products and Services section of this paper.

SOI Studies of Nonprofit Organizations

Beginning in the mid-1970's, SOI again began to collect information on nonprofit organizations, including periodic studies of private foundations and other tax-exempt organizations. Since 1982, studies of private foundations and nonprofit charitable organizations have been conducted annually (except for 1984) [5]. For 1988, the study of nonprofit charitable organizations was expanded to include organizations exempt under Code section 501(c)(4)-(9). An annual study of the "unrelated business income" of tax-exempt organizations was initiated in 1987. Together, these studies provide a basis for examining the growth in the nonprofit sector of the economy.

SOI data indicate that the growth of tax-exempt organizations from 1975 to 1990 substantially exceeded the growth of the national economy as a whole (Figure B). For example, while the real GDP grew by 51 percent in the period from 1974 to 1990, the revenue of private foundations,

 This number represents the sum of "Interest on savings and temporary cash investments" and "Dividends and interest from securities." n.a.-Not available.

adjusted for inflation, increased by 124 percent. The total revenue and total expenses of nonprofit charitable organizations, excluding private foundations, each grew by more than 225 percent from 1975 to 1990, while real GDP increased by 52 percent [6]. In current dollars, total revenue and expenses of all nonprofit charitable organizations, including private foundations, grew from less than 4 percent of GDP in 1975 to nearly 8 percent in 1990 (Figure C).

Nonprofit organizations tax-exempt under Internal Revenue Code section 501(c)

The first recent study of tax-exempt organizations conducted by SOI was for 1975 and included all section 501(c) organizations, charitable as well as other nonprofit organizations, but excluded private foundations. The most recent complete SOI financial data available for nonprofit charitable organizations are for 1989 [7]. The data base is a stratified probability sample of 11,400 organizations that

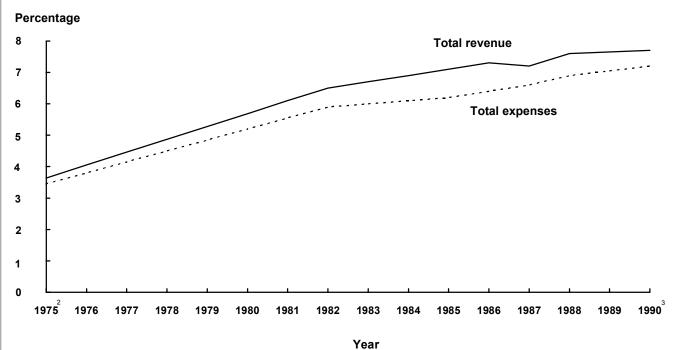

includes all nonprofit charitable organizations with \$10 million or more in assets (6,900 organizations) and 4,500 organizations with less than \$10 million in assets. These data on nonprofit charitable organizations have also been classified by type of organization, including hospitals, educational institutions, and support organizations [8]. The 1989 data for Code section 501(c)(4)-(9) organizations consist of a sample of approximately 10,800 returns selected from a population of 97,300.

Administrative Data on Nonprofits

By any measure, nonprofit charitable organizations (excluding private foundations) receiving tax-exempt status under section 501(c)(3) are the largest group of tax-exempt organizations. Based on data for 1990 from IRS administrative files, returns filed by nonprofit charitable organizations represented 53 percent of the returns filed by

Figure C

¹Includes private foundations and nonprofit charitable organizations ²1975 data for private foundations were estimated based on 1974. ³Preliminary.

all organizations tax-exempt under section 501(c) and accounted for 66 percent of the total assets reported. Between 1975 and 1990, the number of nonprofit charitable organizations grew by 25 percent.

Over the 1975 to 1990 period, in real terms, total assets of nonprofit charitable organizations grew by 171 percent while total assets of business leagues, Code section 501(c)(6); State-chartered credit unions, section 501(c)(14); certain mutual insurance companies, section 501(c)(15); and war veterans organizations, section 501(c)(19), each grew by more than 140 percent. Total revenue for nonprofit charitable organizations grew by 275 percent over this period compared to real GDP growth of 52 percent.

Total revenue for all organizations exempt under section 501(c) (excluding private foundations) reached \$560 billion for 1990, with nonprofit charitable organizations accounting for 73 percent, while voluntary employees' beneficiary associations, section 501(c)(9), and civic leagues and social welfare organizations, section 501(c)(4), ranked second and third. Total investment income was \$33.5 billion, with \$22.6 billion coming from nonprofit charities. Ranking second were State-chartered credit unions with \$3.9 billion, followed by voluntary employees' beneficiary associations with \$2.1 billion.

Total assets for all tax-exempt organizations exceeded \$1 trillion (Figure D). Nonprofit charitable organizations held 66 percent of total assets, followed by State-chartered credit unions with 12 percent.

SOI Data on Nonprofits

More detailed information on exempt organizations is available from the SOI data files. Based on data from the 1989 SOI data file, program service revenue (fees collected to administer charitable programs) was the largest component of total nonprofit charitable organization revenue for 1989, accounting for nearly two-thirds of total revenue. Program service revenue includes a broad spectrum of revenue sources, such as hospital charges for patient care (whether paid by the patient or through thirdparty reimbursement); tuition, fees, and day-care charges at educational institutions; admissions to museums, concerts, and other performing arts events; educational workshop fees; charges for athletic programs and housing facilities at YMCA's; and payments received for insurance and retirement coverage by pension and annuity fund companies.

However, while program service fees were the major source of revenue for the large nonprofit charities, contributions (received directly from the public or indirectly through fundraising campaigns and Government grants) comprised the major portion of the revenues of the smaller

charities. For 1989, contributions represented about 50 percent (\$15.7 billion) of the total revenue (\$27.5 billion) of organizations with assets of less than \$1 million.

Using data from its nonprofit studies, SOI has recently been able to focus its attention on nonprofit hospitals, their financial performance, and how they compare to for-profit hospitals. Nonprofit hospitals and other health-care organizations hold over 30 percent of total nonprofit charitable organization assets and earn 45 percent of total revenue. While the nonprofit hospitals, as a group, hold over five times as much in assets as the for-profit hospitals, the assets of for-profit hospitals grew over three times as fast as those of nonprofit hospitals during the 1980's. Using data collected from IRS tax returns, along with supplementary data from the American Hospital Association and the National Center for Education Statistics, SOI has recently examined comparative financial indicators for nonprofit and for-profit hospitals, such as asset and revenue growth rates, operating margins, debt-to-equity ratios, and returns on equity. The results of the analysis show that the nonprofit hospitals earned higher operating margins, had notably lower debt-to-equity ratios, and earned similar returns on equity when compared to the for-profit hospitals. However, after accounting for the nonprofit advantage of tax-exempt bond financing, the for-profit hospitals earned higher "revised" operating margins and higher "revised" returns on equity than did the nonprofits. Figures E and F show hospital operating margins for the years 1987-1989.

Private foundations

The first SOI studies of information returns filed by private foundations were for 1974 and 1979. For 1982, an annual series was started. Included in the annual samples are the returns of all private foundations with total assets (book value) of \$10 million or more (almost 1,500 returns for 1990, the most recent year for which data are available) [9]. These 1,500 returns, representing only 4 percent of the foundation population, accounted for 82 percent of the total assets of all private foundations. The returns in the remainder of the sample were randomly selected at various rates, ranging from 5.9 percent to 15.4 percent, depending on the size of the book value of total assets. For 1990, private foundations held \$164.8 billion in assets and realized \$19.5 billion in revenues

One of the striking characteristics of foundations is the significance of investment assets as a percentage of the fair market value of total assets (Figure G). For 1990, investment assets accounted for 94.8 percent of total assets, with investments in securities alone accounting for 76.6 percent of total assets. Of the 76.6 percent, investments in corporate stock represented 48.1 percent; investments in U.S. and State Government obligations represented 19.7 percent; and

investments in corporate bonds represented 8.7 percent.

Beginning with 1989 data, SOI again began collecting annual data on the charitable trusts included under Code section 4947(a)(1). These trusts have exclusively charitable interests, and, like foundations, file Form 990-PF. The trusts, which are presented separately from the foundations, represent only 6 percent of all Form 990-PF filers. For 1990, over 2,680 trusts held \$2.8 billion in total assets and realized \$270 million in total revenues.

Tax-exempt organizations' unrelated business income

In 1950, Congress imposed a tax on the income of tax-exempt organizations earned from a trade or business not substantially related to the organization's exempt purpose or function. The law's purpose was to restrict the potential for unfair competition between nonprofits and taxable for-profit businesses providing similar services. The Tax Reform Act of 1969 revised and expanded this tax on "unrelated business income." In more recent years, with Federal cutbacks in funding for social programs leading to increased fiscal pressure on exempt organizations, there has been an increased focus on the movement of exempt organizations into commercial activities and on the resulting impact of this movement on for-profit businesses.

SOI is currently collecting data on unrelated business income of tax-exempt organizations for Tax Years 1988 to 1990. Data are expected to be available by the fall of 1994.

Products and Services

Information on all of SOI's nonprofit studies are published in the quarterly *Statistics of Income Bulletin*. In addition, a *Compendium of Studies of Tax-Exempt Organizations: 1974-1987* was released by SOI [10,11]. This volume is comprised of articles published in the *Statistics of Income Bulletin*, the *Proceedings of the American Statistical Association*, and the *INDEPENDENT SECTOR's Spring Research Forum Working Papers*, along with facsimiles of tax forms and instructions and previously unpublished articles and tables. A second volume in SOI's tax-exempt compendium series, with updated articles on the tax-exempt sector, was published in the fall of 1993 [12]. These compendiums represent only a portion of the available statistical information that might be of value to interested users.

Copies of the microdata tapes for foundations and charitable organizations are available for purchase from Statistics of Income. Since the returns are open to public inspection, these tapes contain identifiable records. Since tax returns on the unrelated business income of organizations are not publicly disclosed, data from Form 990-T returns are not available on tape. Special tabulations can be prepared from all three sources on a reimbursable basis.

Conclusion

SOI is responding to rapid changes in the nonprofit sector with new programs for data collection and analysis. These can be classified as follows:

- Programs to keep pace with growth and diversity in the nonprofit sector. SOI is responding to the rapid growth and diversity of the nonprofit sector by working to improve the classification of tax-exempt organizations. This includes recoding all of the organizations registered with IRS, based on the National Taxonomy for Exempt Entities (NTEE) coding scheme. This will allow for better information about the various segments of the nonprofit sector, and will allow the IRS to identify groupings where there is a need to improve compliance through education efforts. In addition, SOI is helping with efforts to revise the Standard Industrial Classification (SIC) coding scheme to better reflect the activities of tax-exempt organizations.
- Programs to compare for-profit and nonprofit organizations. SOI is considering ways to expand the scope of its current statistical pro-

- grams so that it would be possible to compare for-profit and nonprofit institutions, such as hospitals, in more systematic ways. Current comparisons of nonprofit and for-profit hospitals are a first step in this direction.
- Programs to study the commercial income of nonprofits. SOI has efforts underway to associate unrelated (commercial) income and income related to the exempt function of organizations. In addition, there are plans to collate information on nonprofits with their for-profit subsidiaries. This would permit an examination of organizational structures composed of different business types, such as hospitals.

Notes and References

- [1] The term "tax-exempt organizations" applies to all organizations exempt from Federal income tax under Internal Revenue Code section 501(c). Tax-exempt status is accorded by the U.S. Government to organizations that engage in charitable, religious, and certain other nonprofit activities. The exemption from Federal income tax and the deduction from income allowed to individuals and businesses contributing to section 501(c)(3) organizations have been the major incentives Congress has provided to encourage these philanthropic activities.

by Alicia Meckstroth and Paul Arnsberger

he nonprofit sector, also called the voluntary sector or the independent sector, is an important force in American society. Nonprofit organizations, strengthened by charitable giving and volunteering, make positive differences in communities, states, and the nation by providing goods and services, often using innovative strategies. While nonprofit organizations lack the resources and are not structured to meet all of America's needs, they do play an important role in addressing needs and in enhancing community strength, vitality, and diversity [1]. During the 20-year period from 1975 to 1995, the real assets and revenues of nonprofit organizations filing information returns with the IRS more than tripled, to \$1.9 trillion and \$899 billion, respectively. This compares to real growth in gross domestic product (GDP) of 74 percent during the same 20-year period [2].

The Statistics of Income (SOI) Division of the IRS collects extensive data each year on the different types of organizations that comprise the nonprofit sector. Through these nonprofit sector statistical programs, SOI is involved in ongoing data collection efforts that allow researchers and policymakers to better describe and measure the role of the different types of nonprofit organizations in the American economy.

The nonprofit sector includes a wide range of organizations exempt under section 501(c) of the Internal Revenue Code. First, those organizations exempt under 501(c)(3) are considered charitable in nature and include organizations, such as universities and schools, hospitals, scientific research organizations, United Way campaigns, social service organizations, community development groups, performing arts groups, and environmental support organizations (referred to as nonprofit charitable organizations). Also exempt under section 501(c)(3) are private foundations. The 501(c)(3) organizations operate programs, provide services, and/or make grants in order to fulfill charitable purposes. They can receive tax-deductible contributions to support their pur-

poses. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Also, they are restricted in activities that can influence legislation and political campaigns.

In addition to these charitable organizations, the nonprofit sector includes various other tax-exempt organizations that provide an array of not-for-profit services and activities that benefit their members, but are not charitable in nature. These organizations are exempt from Federal income tax under one of the other 501(c) subsections of the Internal Revenue Code. They include, for instance, civic leagues and social welfare organizations, business leagues, recreational and social clubs, fraternal and voluntary employee beneficiary associations, and State-chartered credit unions. Unlike the 501(c)(3) organizations, the majority of these other exempt organizations are not eligible to receive tax-deductible charitable contributions.

This article is a summary profile of the nonprofit sector over the past 20 years. It begins with a description of the data on nonprofit organizations that are collected from Federal information and tax returns by the Statistics of Income Division of IRS. Next, it describes the manner in which the nonprofit sector has grown and changed over the 20-year period from 1975 to 1995. Then, it provides descriptive statistical profiles of the different types of nonprofit sector organizations--nonprofit charitable organizations, private foundations, and other taxexempt organizations--and highlights trends with each over the past 20 years. In addition, it describes the nature and extent of "unrelated business income" earned by nonprofit organizations and the tax they pay on it. The article concludes with a discussion of the publications and services that are available through SOI, as well as a discussion of SOI's future plans for its nonprofit sector statistical program.

IRS Data on Nonprofit Sector Organizations

A variety of tax policy issues related to exempt organizations and the nonprofit sector can be addressed using data collected by the IRS from tax and information returns, including the comprehensive sample data from the Statistics of Income (SOI) Division, as well as the less detailed population data from the IRS administrative business master file. This article relies primarily on SOI data, but draws

on IRS master file data in cases where SOI data are not available. The available data from SOI and the IRS master file are described below.

Statistics of Income Data

The Statistics of Income (SOI) Division constructs population estimates and compiles detailed descriptive data of nonprofit organizations using samples of tax and information returns filed by the organizations. Data--financial and otherwise--are compiled from the income statements, balance sheets, and schedules of the tax and information returns. Data are collected annually by SOI for the following types of nonprofit organizations:

- □ Nonprofit charitable organizations exempt under subsection 501(c)(3). (Filers of Form 990, Return of Organization Exempt from Income Tax or Form 990-EZ)
- □ Private foundations exempt under subsection 501(c)(3). (Filers of Form 990-PF: Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation) [3]
- ☐ Other organizations exempt under subsections 501(c)(4)-(c)(9). (Filers of Form 990, Return of Organization Exempt from Income Tax or Form 990-EZ)
- ☐ Organizations exempt under section 501(c) that earned income from activities that were unrelated to the organizations' exempt purpose. (Filers of Form 990-T, Exempt Organization Business Income Tax Return)

SOI data are most recently available for Reporting Year 1995 for all of these types of organizations. Since the mid-1970s, data on exempt organizations have been collected by SOI. Private foundation data were first collected by SOI for Reporting Year 1974; other exempt organization data were first collected by SOI for Reporting Year 1975. For the 1975 study, SOI collected sample data for all types of organizations exempt under section 501(c), including those exempt under subsections 501(c)(1), (c)(2), and (c)(10)-(c)(25), for which later SOI data are not

available.

Since 1982, SOI data on private foundations and nonprofit charitable organizations have been collected annually (except for 1984). In 1988, the study of nonprofit charitable organizations was expanded to include organizations exempt under subsections 501(c)(4)-(c)(9). Finally, in 1987, an annual study of the unrelated business income of exempt organizations was initiated. Together, all of these studies provide a basis for examining the growth in the American economy's nonprofit sector.

SOI data are based on stratified probability samples, with higher sampling rates for the larger organizations [4]. The data are subject to comprehensive consistency and validity testing and correction procedures to ensure that they are of high quality.

IRS Master File Administrative Data

In addition to the SOI studies, the IRS collects selected data items from *all* exempt organization returns through the administrative Business Master File of exempt organizations. Master File data for Reporting Year 1995 include all those organizations that filed 1995 returns through the end of Calendar Year 1997, or essentially the entire population required to file. Master File data are used for IRS administrative purposes. Unlike the SOI data files, only limited information (for example, total assets, total revenue, and total contributions received) is available from these annual administrative files. In addition, these Master File data are subject only to limited testing; thus, taxpayer filing errors may not always be corrected.

Although this article relies primarily on SOI data for all years, it draws on Master File data in cases where SOI data are not available. That is, since SOI data are not available for 1995 for organizations exempt under subsections 501(c)(1), (c)(2), and (c)(10)-(c)(25), master file data are used to present estimates related to these organizations for that year.

Profile of the Nonprofit Sector

In 1995, there were approximately 1.2 million nonprofit organizations exempt under section 501(c) of the Internal Revenue Code, including private foundations. Of these, only about 355,000 were required to file information returns with the IRS.

The remainder, approximately 845,000, were not required to file either because they were churches, synagogues, or other religious organizations (over 340,000) or because they had annual gross receipts of less than \$25,000 [5]. Of those that filed information returns, 51 percent were nonprofit charitable organizations exempt under section 501(c)(3); 13 percent were private foundations also exempt under section 501(c)(3); 36 percent were other types of organizations exempt under subsections 501(c)(1), (c)(2), or (c)(4) - (c)(25), including business leagues, civic leagues, labor organizations, and social clubs.

Nonprofit organizations represent an important and growing force in the American economy. From 1975 to 1995, the total number of all nonprofit organizations that filed returns with the IRS--those organizations exempt under section 501(c) of the Internal Revenue Code--increased by 44 percent to an estimated 355,000. Figure A shows the number of each type of exempt organization for both 1975 and 1995, along with total assets and revenues. The total revenue and total assets reported by exempt organizations more than tripled in real terms from

1975 to 1995 [6,7]. This compares to growth in real GDP of 74 percent during this same 20-year period. The greatest growth came from the nonprofit charitable organizations and private foundations.

The revenues of all organizations exempt under section 501(c) are estimated at 12.4 percent of the 1995 gross domestic product (GDP), which is more than double that of 20 years ago. By excluding from the calculation the revenue of other exempt organizations and private foundations, the revenue of 501(c)(3) nonprofit charitable organizations alone represents 9.1 percent of GDP. It should be noted, however, that the nonprofit sector's share of GDP does not account for double-counted contributions: that is, it does not remove those contributions that are given by one nonprofit organization to another nonprofit organization. One study, using 1987 data, suggested that the total revenue of 501(c)(3) nonprofit charitable organizations would be approximately 5 percent less each year if adjustments for such doublecounting were made [8]. Given this, if revenues of all 501(c)(3) organizations were reduced by 5 percent. their share of GDP would fall from 9.1 percent to an

¹ Adjustments for inflation are based on the 1992 chain-type price index for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, Table 7.1.

² The total number of organizations includes only those that were required to file an information return with the IRS.

³ Assets were generally reported in book value for the 501(c)(3) nonprofit charitable organizations and the other exempt organizations. While assets for the private foundations were reported in book value for 1975, they were reported in fair market value for 1995.

⁴ Includes organizations exempt under sections 501(c)(1), (2), and (4) through (25).

NOTE: Data for 1995 for those organizations exempt under subsections 501(c)(3) through (c)(9) are from the 1995 SOI study. For organizations exempt under all other subsections, data are from the IRS's administrative master file. Data for 1975 are from the 1975 SOI study (and, for private foundations, from the 1974 SOI study).

estimated 8.7 percent [9].

Despite their important role, nonprofit organizations comprise a much smaller share of the American economy than either business or government. That is, the nonprofit sector's share of national income was estimated at less than half that of the government sector for 1995 [10]. For a detailed accounting of the different types of organizations that comprise the nonprofit sector, refer to the *Nonprofit Almanac* [11].

Nonprofit Charitable Organizations Exempt Under Section 501(c)(3)

Nearly 181,000 nonprofit charitable organizations exempt under section 501(c)(3) filed Forms 990 for 1995. These organizations held \$1.1 trillion in assets and earned over \$663 billion in revenues [12]. In addition, they received nearly \$128 billion in contributions, gifts, and grants from a combination of public and private sources. Although more than 75 percent of these nonprofit charitable organizations each held less than \$1 million in assets, the vast majority of assets and revenues are accounted for by those organizations that held \$50 million or more in assets. These large nonprofit charitable organizations held 76 percent of total assets and accounted

for 65 percent of total revenues for 1995.

Beginning with Tax Year 1994, SOI has been classifying nonprofit charitable organizations using the National Taxonomy of Exempt Entities (NTEE), developed by the National Center for Charitable Statistics [13]. This system classifies organizations based on their institutional purpose and major activity. The NTEE system is comprised of 26 groups, which can be aggregated into the 10 major categories shown in Figure B.

There were nearly 72,000 human service organizations in 1995, comprising 40 percent of the total number of nonprofit charities filing returns with the IRS. Educational and health-related organizations, while fewer in number, held the majority of assets, a combined \$726 billion. Mutual benefit organizations also held a large amount of assets despite their small numbers. Organizations in the health category received the most revenue for 1995, nearly \$365 billion. Eighty-six percent of this revenue was generated by program services, by far the largest portion of revenue of any of the 10 major groups. Some other categories relied heavily on contributions, gifts, and grants (religion-related organization) or membership dues (mutual benefit associations).

Figure B

Selected Items for Nonprofit Charitable Organizations Classified by NTEE Major Category, 1995

[Money amounts are in millions of dollars]

NTEE major category¹	Number of returns	Total assets	Total liabilities	Total fund balance or net worth	Total revenue	Contributions, gifts, and grants	Program service revenue	Total expenses	Excess of revenue over expenses

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that can be aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations. See Notes and References.

² Excludes most colleges and universities operated by State and local governments.

³ Less than \$500,000.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Twenty-Year Nonprofit Charitable Organization Growth

The growth in nonprofit charitable organizations over the period from 1975 to 1995 has been dramatic. During this nearly 20-year period, the number of nonprofit charitable organizations that file Form 990 more than doubled, from over 82,000 for 1975 to nearly 181,000 for 1995. The growth in nonprofit charitable organization assets and revenues has been even more dramatic, as illustrated in Figure C. This figure shows real growth in assets, revenues, and contributions received by nonprofit charitable organization filers. The growth in total assets and total revenues increased by over 312 percent and 380 percent, respectively, from 1975 to 1995. However, the amount of contributions received, which currently comprises about one fifth of total revenue,

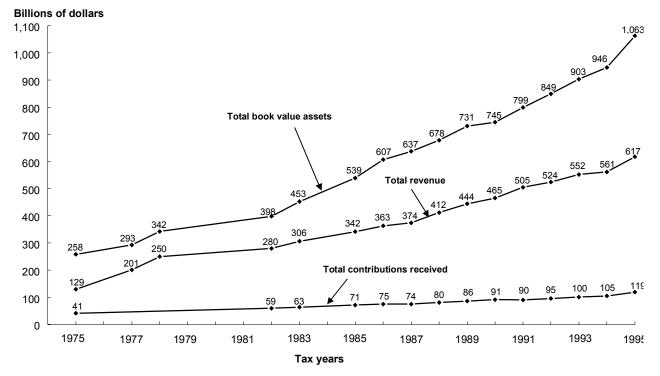

increased by only 190 percent, less than the growth in assets and revenues.

Revenues of Nonprofit Charitable Organizations

As a group, nonprofit charitable organizations rely on program service revenue as their primary source of income. Program service revenue is comprised primarily of fees collected from the programs and activities operated in support of an organization's tax-exempt purpose. Examples of program service revenue include tuition and fees at educational institutions, hospital patient care charges (including Medicare and Medicaid payments), admissions fees collected by museums or community performing arts groups, and YMCA/YWCA activity fees. As shown in Figure D, program service revenue comprised two-thirds of nonprofit charitable organization

Figure C

Internal Revenue Code Section 501(c)(3) Nonprofit Charitable Organizations: Total Assets, Revenue, and Contributions Received, 1975-1995, in Constant Dollars¹

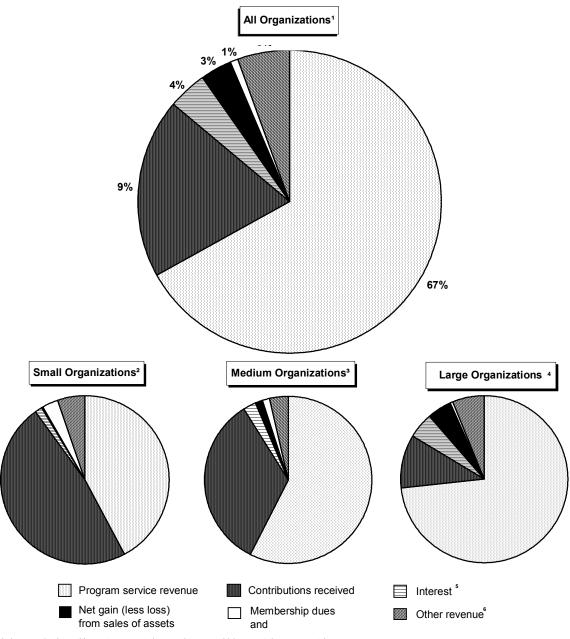

¹ Adjustments for inflation are based on the 1992 chain-type price index for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, Table 7.1.

NOTES: SOI data were used for all years. Total revenue estimates for 1977 and 1978 actually represent total receipts; total revenue was not available from SOI data for these years. Total receipts generally are greater than total revenue by the sum of cost of goods sold and sales and revenue expenses.

Figure D

Sources of Internal Revenue Code Section 501(c)(3) Nonprofit Charitable Organization Revenue, by Size of Organization, 1995

¹ Includes organizations with assets unreported or equal to zero, which are not shown separately.

² Small organizations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

⁴Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁵ Sum of "Dividends and interest from securites," and "Interest on savings and temporary cash investments," from Form 990.

⁶ Sum of "Net rental income," "Other investment income," "Net income (loss) from special events and activities," "Gross profit (loss) from sales of inventories," and "Other revenue," as reported on the Form 990. "Other income" includes items such as interest on notes receivable not held as investments; interest on loans to officers, directors and other employees; and royalties that do not constitute investment income or program service revenue.

NOTE: Data are from Form 990 filers only.

revenue. In general, as the size of the organization increases, so does its reliance on this type of revenue. Since 1975, nonprofit charitable organizations have increasingly relied on program service revenue. They earn or receive smaller portions of total revenue from two other sources: contributions, 19 percent; and investment income such as dividends, interest, and net gain from sales of assets, 6 percent. The proportion of revenue that nonprofit charitable organizations receive from contributions has dropped substantially since 1975, when contributions received represented nearly one-third of total revenue.

Of the contributions received by nonprofit charitable organizations, 42 percent were from government grants (not including government contracts), and 58 percent were from nongovernmental sources. These percentages were very similar for 1982 data, the first year SOI collected data on the different types of contributions received by nonprofit organizations. In general, smaller organizations tend to rely much more on contributions, gifts, and grants. Typically, as organizations increase in size, they tend to rely less on contributions and more on program service revenue as their primary source of income.

Assets of Nonprofit Charitable Organizations

The assets of nonprofit charitable organizations are comprised of a variety of investments and other holdings. Figure E reveals that over one half, or 55 percent, of assets are comprised of investments, which include securities, such as corporate stock, corporate bonds, and U.S. and State Government obligations; savings and temporary cash investments; and other miscellaneous investments. Holdings of charitable-purpose land, buildings, and equipment (less accumulated depreciation) comprise one-quarter of total assets. The remaining 19 percent of assets are comprised of net accounts receivable; other types of receivables, such as pledges, grants, and loans; inventories for sale or use; prepaid expenses and deferred charges; cash; and other assets, such as program-related investments (those investments made primarily to accomplish an exempt purpose). Over time, nonprofit charitable organizations, in aggregate, have tended to hold greater proportions of assets as investments in securities.

As organizations increase in size, they tend to hold a greater proportion of their assets as invest-

ments in securities, and less as savings and other temporary cash investments. For instance, for 1995 those small organizations that held less than \$1 million in total assets held 10 percent of their assets as investments in securities and 26 percent as savings and other temporary cash investments. In contrast, those large organizations that held \$50 million or more in assets held 43 percent of assets as investments in securities and 6 percent as savings and other temporary cash investments.

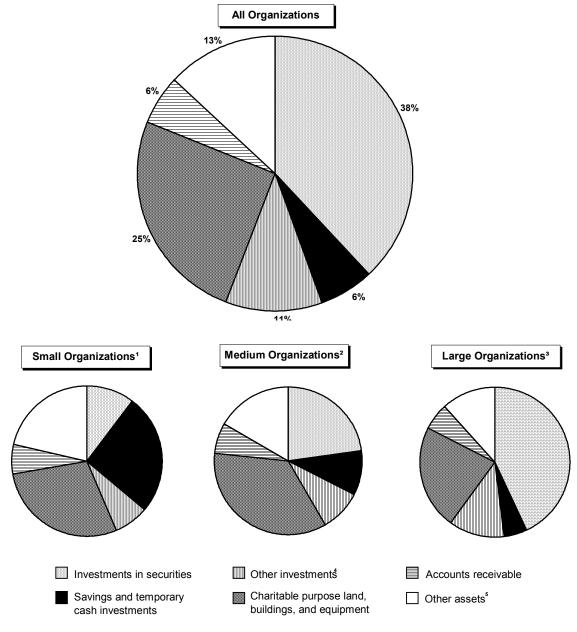

Private Foundations

Nearly 48,000 private foundations filed Form 990-PF returns with the IRS for Reporting Year 1995. These organizations held \$263 billion in fair market value assets, received \$32 billion in revenues, and distributed \$13 billion in charitable gifts and grants to various causes, such as education, health, human services, community development, the arts and humanities, the environment, and research. Although 72 percent of all private foundations each hold less than \$1 million in assets, the majority of foundation assets are held by the less than 1 percent of foundations that hold \$100 million or more in assets. These very large foundations account for about 60 percent of total foundation assets and half of total foundation revenues.

A private foundation is a nonprofit, tax-exempt corporation, association, or trust, which is narrowly supported and controlled, usually by an individual, family, or corporation. It is this narrow base of support and control that distinguishes a private foundation from other charitable organizations exempt under section 501(c)(3). Due to their centralized support and control, foundations are more strictly regulated compared to other nonprofit organizations. The majority of foundations are "nonoperating foundations" that generally provide indirect charitable support by making grants to other nonprofit organizations that conduct charitable programs of their own. These nonoperating foundations (92 percent of all foundations) are required to distribute a minimum amount each year for charitable purposes. The required minimum "pay out" amount is based on 5 percent of the value of a foundation's net investment assets. In addition, most foundations are required to pay an annual 2 percent excise tax on their investment income.

Figure E

Composition of Internal Revenue Code Section 501(c)(3) Nonprofit Charitable Organization Assets, by Size of Organization, 1995

¹ Small organizations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

 $^{^{2}}$ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

³ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁴ Sum of "Investments in land, buildings, and equipment," and Other investments," as reported on the Form 990. "Other investments" include items such as advances; and investments in art, exists, gold, and gomes.

⁵ Sum of "Cash," "Pledges receivable," "Grants receivable," "Receivables due from officers, directors, trustees, and key employees," "Other notes and loans receivable," "Inventories for sale or use," "Prepaid expenses and deferred charges," and "Other assets" as reported on the Form 990. "Other assets" include, for example, program-related investments, which are investments made primarily to accomplish an exempt purpose, rather than to produce income.

NOTE: Data are from Form 990 filers only.

20-Year Private Foundation Growth

Private Foundations rely largely on asset growth, earned income from investments, and contributions received to support their charitable giving. As with the nonprofit charitable organizations, private foundations have grown dramatically over the past 20 years, as illustrated in Figure F. While the number of foundations increased by only 78 percent from 1974 to 1995, foundation fair market value real assets soared, increasing nearly fourfold over the 21year period. Foundation assets grew relatively steadily each year, with the exception of two years when the value of assets dropped. Since foundations hold the majority of their assets as investments and earn a large portion of their revenue through investment income, they assume more risk than other nonprofit organizations, and, hence, experience

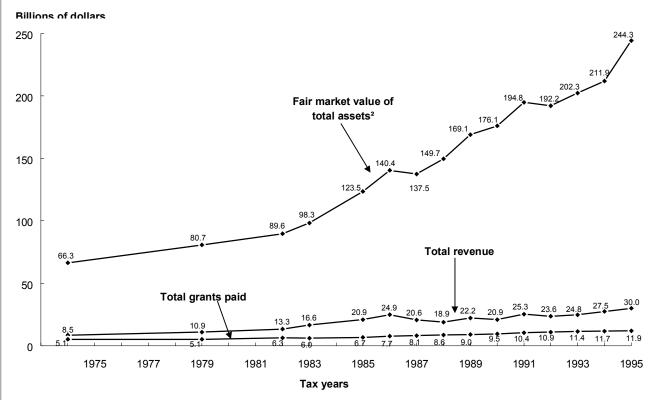

greater short-term volatility, but also greater long-term growth. Overall, foundation revenues, measured in real terms, more than tripled from 1974 to 1995, despite year-to-year fluctuations. The growth of foundation assets has helped to support growth in their charitable giving, which increased in real terms by 133 percent from 1974 to 1995.

Revenues of Private Foundations

Private foundation revenue is comprised largely of various types of investment income, as shown in Figure G. For 1995, foundations earned about two-thirds of their revenue from investments, which included 37 percent from net gains from sales of assets, 24 percent from dividends and interest from securities, and 4 percent from interest on savings and temporary cash investments. And, like other non-

² Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

⁴ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

 $^{^{\}rm 5}$ Represents "Interest on savings and temporary cash investments," as reported on Form 990-PF.

⁶ Includes "Gross rents and royalties" and "Gross profit (or loss) from business activities" as reported on Form 990-PF, as well as items such as imputed interest on deferred payments and program-related investment income.

profit charitable organizations, foundations also rely on contributions as a source of revenue. Most of the remaining revenue was comprised by contributions, 29 percent. Compared to 1974 data, the proportion of foundation revenue comprised by these different sources has remained fairly constant.

As foundations grow in asset size, they rely much more on investment income as their primary source of income and much less on contributions. For instance, the largest foundations--those holding \$100 million or more in fair market value of assets-received 80 percent of revenue from investment income and 15 percent from contributions for 1995. On the other hand, the smallest foundations--those holding less than \$1 million in fair market value of assets--received only 25 percent of revenue from investment income, but 65 percent from contributions. It is likely that at least some of the contributions received by smaller foundations are made by the larger foundations.

Assets of Private Foundations

Holdings of investment assets dominate total foundation assets, comprising 93 percent of assets for 1995. As illustrated in Figure H, over three-quarters of foundation assets were held as investments in securities, which include corporate stock (58 percent), corporate bonds (8 percent), and government obligations (12 percent). Significant proportions of other types of assets held by foundations include investments in savings and temporary cash investments, 5 percent, and "other" investments, 10 percent. The "other" investment category includes, for example, investments in land, buildings, and equipment, and mortgage loans. Since 1982 (the first year for which detailed data by asset type was available in fair market value), the proportion of assets comprised by investments has remained fairly constant, 92 percent for 1982 compared to 93 percent for 1995

As foundations grow in size, they tend to engage in more sophisticated investment practices and hold greater proportions of investments in securities. For instance, the largest foundations held 81 percent of their assets as investments in securities for 1995, while the smallest foundations held 59 percent of their assets in this manner. Due in large part to their greater holdings of investments in securities, the

larger foundations have realized much greater increases in asset growth over the past 20 years compared to their smaller foundation counterparts.

Private Foundation Investment Performance and Charitable Giving

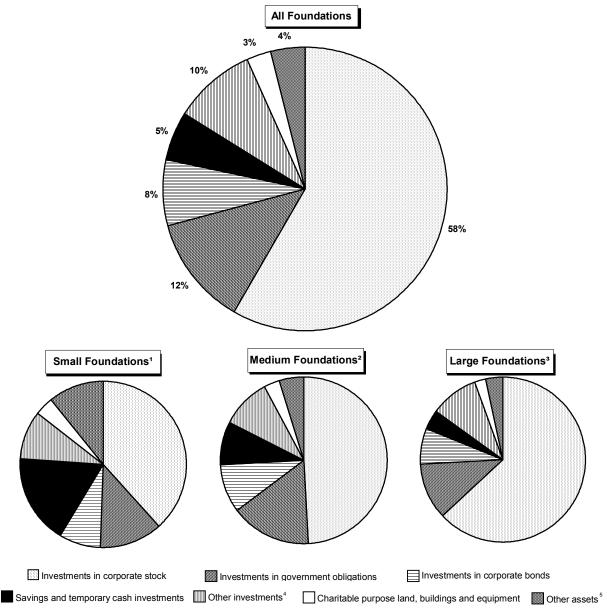

Three measures of foundation behavior are interesting to examine: (1) the realized investment income earned by a foundation on its investment assets, or its "income yield;" (2) total capital appreciation of a foundation's endowment, or its "rate of total return on assets"; and (3) charitable distributions made as a proportion of adjusted net investment assets, or a foundation's "payout rate" [14].

A foundation's net investment income yield is calculated by dividing net investment income by endof-year fair market value of assets. The median income yield, 5.8 percent for 1995, has remained relatively constant since the mid-1980's, when SOI began calculating the yield regularly. For instance, during the period 1986 to 1995, the median income yield ranged from a low of 4.9 percent for 1994 to a high of 7.7 percent for 1989. Larger foundations typically earn higher income yields. For instance, foundations holding \$100 million or more in assets realized a median yield of 8.0 percent for 1995, compared with 4.5 percent for small foundations holding between \$1 and \$100,000 in assets. Large foundations, compared to small foundations, rely more on investment income as a source of revenue. These foundations also possess the resources to use more sophisticated investment management techniques. Both factors help explain why the larger foundations typically realize higher income yields.

The rate of return, a measure of the total capital appreciation of a foundation, is a more comprehensive measure of investment performance than the income yield. The formula used here to calculate rate of return measures the change in the value of the entire asset base, with considerations for inflows and outflows of money [15]. The formula measures the realized income from assets, investments, and otherwise, as well as the unrealized appreciation or depreciation of fair market value of assets. As calculated using SOI statistics, the median foundation earned a rate of total return of 10.2 percent for 1995. Foundations experience more year-to-year variation in rates of total return, compared to income yields, as fluc-

Figure H

Composition of Private Foundation Assets, by Size of Foundation, 1995

¹ Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

² Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

³ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁴Sum of "Investments in land, buildings, and equipment," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments" includes items such as advances: certificates of investment: and investments in art. coins. αold. and αems.

⁵ Sum of "Cash: non-interest bearing accounts," "Inventories," "Prepaid expenses and deferred charges," "Accounts receivable, net," "Pledges receivable, net," "Grants receivable," "Receivables due from disqualified persons," "Other notes and loans receivable," and "Other assets" as reported on the Form 990-PF. "Other assets" include, for example, program-related investments, which are investments primarily to accomplish a charitable purpose rather than to produce income.

tuations in the rates of total return tend to coincide with fluctuations in the stock market. This is particularly true for larger foundations, which typically hold a greater proportion of assets as investments, making them able to earn higher returns, but subjecting them to greater risk and volatility in realized returns. For instance, the median foundation earned a rate of return that dropped from 1.9 percent for 1993 to less than 1 percent for 1994, only to rise sharply to 10.2 percent for 1995.

As with income yields, large foundations typically realize higher rates of return compared to their smaller counterparts. For 1995, the largest foundations, or those holding \$100 million or more in assets, realized a median rate of 19.8 percent, compared with 1.8 percent for the smallest foundations, or those holding between \$1 and \$100,000 in assets

The payout rate measures a foundation's "qualifying (charitable) distributions" as a proportion of its net investment assets. Nonoperating foundations are required to pay out 5 percent of the value of their net investment assets each year. Aggregate foundation payout rates are generally very steady from year to year. For instance, from 1986 to 1995, the median payout rate ranged from a low of 6.1 percent for 1993 to a high of 7.2 percent for 1988.

Small foundations tend to distribute more charitable dollars relative to their required amount. Consequently, they tend to have higher payout rates compared to the larger foundations. For instance, the median payout rate for 1995 for the smallest foundations, 10.5 percent, was much higher than the median payout rate for the largest foundations, 5.1 percent. Payout rates for the large and midsized foundations generally are between 5.0 and 6.0 percent, or very close to the required 5 percent. Those of the smaller foundations, which tend to emphasize current charitable giving, rather than long-term endowment growth, are typically much higher than the required rate. The larger foundations, in contrast, typically reinvest a greater proportion of their return on investments, consequently growing their endowments, which helps to ensure increased amounts of charitable giving in the future.

Other Exempt Organizations

Other nonprofit organizations, as discussed here, are those organizations exempt under subsections 501(c)(4)-(c)(25) of the Internal Revenue Code [16].

These other exempt organizations--including civic leagues, business leagues, labor organizations, and recreational clubs, among others--encompass a diverse group of voluntary organizations that provide various services, activities, and programs for different subgroups within the American population. For 1995, over 119,000 "other exempt organizations," those that are exempt filers under sections 501(c)(4)through 501(c)(25), held \$455.3 billion in assets and received \$192.2 billion in revenues. Unlike the nonprofit charitable organizations that are taxexempt under section 501(c)(3), most of these other exempt organizations are not eligible to receive taxdeductible contributions. Figure I provides a summary description of the different types of 501(c) organizations and the activities in which they engage. Table 1 provides selected financial data for both 1975 and 1995 for all Form 990 filers exempt under section 501(c) (excluding private foundations). The table presents data in constant, 1992-based dollars.

The section 501(c)(4) through (c)(25) exempt organizations represent a smaller proportion of the nonprofit sector compared to the nonprofit charitable organizations exempt under section (501)(c)(3). For instance, for 1995, these other exempt organizations comprised over 39 percent of section 501(c) Form 990 filers in number, 28 percent in total assets, and 22 percent in total revenue. This represents a smaller share than for 1975, when these organizations comprised 61 percent of the section 501(c) Form 990 filers, held 34 percent of total assets, and received 39 percent of total revenues.

Four types of organizations comprise nearly 70 percent of the total number of organizations exempt under sections 501(c)(4) through 501(c)(25). Based on 1995 data, these include:

501(c)(6): Business leagues, chambers of commerce, and real estate boards, 21 percent

501(c)(4): Civic leagues, social welfare organizations, and local employee associations, 18 percent

501(c)(5): Labor, agricultural, and horticultural organizations, 18 percent

501(c)(7): Social and recreational clubs, 13 percent

Figure I

Types of Exempt Organizations, by Internal Revenue Code Section 501(c)

	· · · · · · · · · · · · · · · · · · ·	()
Internal Revenue Code section	Description of organization	General nature of activities
501(c)(1)	Corporations organized under Act of Congress	Instrumentalities of the United States
501(c)(2)	Title holding corporation for an exempt organization (e.g., Masonic building corporations)	Holds title to property of an exempt organization
501(c)(3)	Charitable, religious, educational, scientific, and literary organizations (including private foundations) and organizations that foster national or international amateur sports competitions, prevent cruelty to children and animals, and test for public safety (e.g., Yale University, Kaiser Foundation Health Plan, United Way, Ford Foundation)	Promotes public welfare (as opposed to private interests) primarily through charitable, religious, educational, scientific, or literary activities
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees (e.g., Lions Clubs, Rotary Clubs, volunteer fire departments)	Promotes community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
501(c)(5)	Labor, agricultural, and horticultural organizations (e.g., Major League Baseball Players Association, United Auto Workers)	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
501(c)(6)	Business leagues, chambers of commerce, and real estate boards (e.g., National Football League, American Bar Association)	Works toward improvement of business conditions in one or more lines of business
501(c)(7)	Social and recreational clubs (e.g., Metropolitan Club, sorority and fraternity chapters)	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations (e.g., B'nai B'rith, Loyal Order of Moose)	Provides for payment of life, sickness, accident, or other benefits to members
501(c)(9)	Voluntary employee beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered under 501(c)(10)) (e.g., U.S. Steel and Carnegie Pension Plan, National Education Association Members Insurance Trust)	Provides for payment of life, sickness, accident, or other benefits to members
501(c)(10)	Domestic fraternal societies (e.g., Knights Templar)	Devotes nets earnings to charitable, fraternal, and other specified purposes, without life, sickness, or accident benefits to members
501(c)(11)	Teachers' retirement fund associations	Fiduciary association that provides payment of retirement benefits
501(c)(12)	Local benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
501(c)(13)	Cemetery companies	Provides burials and incidental related activities to members
501(c)(14)	State-chartered credit unions and mutual reserve funds	Provides loans to members
501(c)(15)	Certain mutual insurance companies or associations	Provides insurance to members substantially at cost
501(c)(16)	Farmers cooperatives organized to finance crop operations	Finances crop operations in conjunction with activities of a marketing or purchasing association
501(c)(17)	Supplemental unemployment benefit trusts	Fiduciary agent that pays supplemental unemployment compensation benefits
501(c)(18)	Employee-funded pension trusts	Provides for payments of benefits under a pension plan funded by employees
501(c)(19)	War veterans organizations (e.g., American Legion Posts)	Provides services and activities for war veterans
		•

NOTE: A small number of other organizations are also exempt under subsections 501(c)(20)-(25). These include: prepaid legal service funds exempt under 501(c)(20); black lung benefit trusts exempt under 501(c)(21); withdrawal liability payment funds exempt under 501(c)(22); associations of past and present members of the armed forces founded before 1880, exempt under 501(c)(23); trusts described in section 4049 of the Employee Retirement Income Security Act of 1974 exempt under 501(c)(24); and title-holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or benefit interest exempt under 501(c)(25). Those organizations exempt under 501(c)(20) were only exempt for reporting years before June 20, 1992.

Other types of organizations, while relatively small in number, hold large portions of other exempt organization assets. State-chartered credit unions exempt under section 501(c)(14), for instance, comprise 33 percent of total other exempt organization assets, but represent only 1 percent in number. Similarly, local benevolent life insurance associations exempt under section 501(c)(12) comprise 11 percent of total other exempt organization assets, but represent only 3 percent in number. Two other types of organizations also hold relatively large shares of other exempt organization assets: voluntary employee beneficiary associations exempt under section (501)(c)(9), 15 percent; and civic leagues, social welfare organizations, and local employee associations exempt under section 501(c)(4), 10 percent.

The majority of the revenues of other exempt organizations are attributable to the 501(c)(9) voluntary employee beneficiary associations, 37 percent, and three other types of other exempt organizations that each represent from 10 to 15 percent of total revenue: section 501(c)(4) civic leagues, social welfare organizations, and local employee associations; section 501(c)(12) local benevolent life insurance associations; and section 501(c)(6) business leagues, chambers of commerce, and real estate boards.

20-Year Profile of Other Exempt Organizations

The other exempt organizations have not realized the same levels of growth as nonprofit charitable organizations and private foundations over the past two decades. In fact, the number of these organizations actually fell from 1975 to 1995 by 11 percent [17]. Nevertheless, real assets and revenues increased by 197 and 113 percent, respectively, well below the rates of increase of other section 501(c)(3) nonprofit organizations. Over the 20-year period, the biggest decrease in the number of organizations was for the 501(c)(5) labor, agricultural, and horticultural organizations, which fell by over 7,000 organizations, or 25 percent. The greatest increase in the number of organizations occurred among the 501(c)(6) business leagues, chambers of commerce, and real estate boards, which grew by nearly 8,000 organizations, or 46 percent.

In terms of assets, the greatest increases were realized by two types of organizations: State-char-

tered credit unions and voluntary employee beneficiary associations, 501(c)(14) and 501(c)(9), respectively. Over the 1975-1995 period, these organizations realized real asset gains of 420 percent and 504 percent, respectively. In terms of revenues, the greatest increases were realized by the voluntary employee beneficiary associations and the 501(c)(12) local benevolent life insurance associations, which, respectively, received over 469 and 333 percent more in real revenues for 1995 compared to 1975. Not all other exempt organizations, however, saw their revenues increase over the 20-year period. For instance, the revenues of the 501(c)(4) civic leagues, social welfare organizations, and local employee associations fell by 24 percent, as their receipts from member dues and assessments dropped dramatically.

Revenues and Assets of Other Exempt Organiza- tions

Other exempt organizations rely largely on program service revenue as a source of income. Program service revenue comprised 69 percent of total other exempt organization revenue for 1995, nearly the same percentage as for the 501(c)(3) nonprofit charitable organizations. Program service revenue represents income from fees collected from programs and activities that are operated to support the organizations' tax-exempt purposes. Examples of program service revenue include interest income on loans a credit union makes to its members, payments received by voluntary employee beneficiary associations from participants or employers of participants for health and welfare benefits coverage, insurance premiums received by a fraternal beneficiary society, and registration fees received in connection with a meeting or convention. It also includes income from program-related investments, which are investments made for the primary purpose of accomplishing an exempt purpose consistent with the organization's exempt status--for example, scholarship loans or low-interest loans to charitable organizations or indigent persons.

Over the past 20 years, other exempt organizations have tended to rely increasingly on program service revenue as their primary source of revenue. At the same time, their overall reliance on contributions received and member dues and assessments has fallen. For instance, for 1975, member dues and

assessments comprised over half of total other exempt organization revenue, and contributions received, one-tenth. However, by 1995, dues and assessments comprised only 14 percent of total other exempt organization revenue, and contributions received, only 3 percent. For 1995, program service revenue was the major source of revenue for many exempt organizations, including section 501(c)(8) fraternal beneficiary societies, section 501(c)(9) voluntary employee beneficiary associations, section 501(c)(12) local benevolent life insurance associations, and section 501(c)(14) State-chartered credit unions.

Still, some exempt organizations do rely on member dues and assessments, rather than program service revenue, as their primary source of income. For instance, section 501(c)(5) labor, agricultural, and horticultural organizations and section 501(c)(7) social and recreational clubs both receive nearly 60 percent of revenue from member dues and assessments, and less than 26 percent from program service revenue. Section 501(c)(6) business leagues, chambers of commerce, and real estate boards and section 501(c)(10) domestic fraternal societies also receive more from dues and assessments than from program services.

Detailed SOI data on the different types of assets held by exempt organizations are only available at this time for section 501(c)(3) to (c)(9) organizations. Using 1995 SOI data, both section 501(c)(8) fraternal beneficiary societies and section 501(c)(9) voluntary employee beneficiary associations held over half of their assets as investments in securities, 58 percent and 65 percent, respectively. As a basis for comparison, section 501(c)(3) nonprofit charitable organizations held 38 percent of their assets as investments in securities. In contrast to organizations that hold large proportions of assets as investments in securities, section 501(c)(7) social and recreational clubs hold very few of their assets as investments in securities, only 3 percent. These social and recreational clubs hold 66 percent of their assets in the form of charitable-purpose land, buildings, and equipment. The other exempt organizations that are in the section 501(c)(4) through (c)(9) group have far fewer holdings in land, buildings, and equipment.

Exempt Organizations' Unrelated Business Income

The similarities between certain types of nonprofit organizations (for example, 501(c)(3) hospitals) and their for-profit counterparts have raised many questions regarding tax-exempt status. As competition with other entities has increased, some nonprofit organizations have begun to earn supplementary income, which is considered unrelated to their charitable purpose and on which the unrelated business income tax is levied.

Unrelated business income (UBI) is defined as income from a trade or business that is regularly carried on by an exempt organization and is not substantially related to carrying out the exempt purpose or function for which the organization has tax-exempt status. Congress established the unrelated business income (UBI) tax as part of the Revenue Act of 1950. The UBI tax initially applied only to organizations exempt under sections 501(c)(3), (5), (6), (9), and (15). The law's purpose was to restrict the potential for unfair competition between nonprofit organizations and taxable for-profit businesses that provide similar services. In addition to section 501(c) organizations, the unrelated business income tax provisions apply to section 401(a) Individual Retirement Arrangements and section 408(e) qualified pension, profit-sharing, and stock bonus plans. The Tax Reform Act of 1969 revised and expanded this tax on unrelated business income to include all 501(c) organizations, except those U.S. Government instrumentalities exempt under section 501(c)(1).

Unrelated business taxable income is gross unrelated business income, less deductions directly connected with carrying on the trade or business, and less certain other deductions. The unrelated business income tax is determined based on the corporate or trust tax rates that are in effect for a given tax year. For Tax Year 1995, over 36,400 exempt organizations reported \$6.3 billion of "gross unrelated business income" from regular business activities that were not substantially related to their exempt purposes. After offsetting gross UBI with \$7.3 billion of total deductions, these organizations reported an aggregate net deficit of \$1.0 billion. After consider-

ing these deductions, half of these organizations reported positive unrelated business *taxable* income (UBTI) and were required to pay the unrelated business income tax. These 18,200 organizations reported positive UBTI of \$893.0 million. After adjustments for other taxes and certain credits were made to the \$276.6 million of reported unrelated business income tax, nonprofit organizations incurred a total tax liability of \$277.5 million. The UBI earned by exempt organizations most commonly falls into the major industrial categories services and finance, insurance, and real estate. Over 80 percent of organizations that reported gross UBI for 1995 received at least some of their income from activities falling into one or both of these categories.

Sixty-two percent of all exempt organizations that filed Form 990-T for Reporting Year 1995 fell into one of three categories: section 501(c)(3) nonprofit charitable organizations (including private foundations), 27 percent; section 501(c)(7) social and recreational clubs, 18 percent; and section 501(c)(6) business leagues, chambers of commerce, and real estate boards, 17 percent. Since section 501(c)(3) organizations represent the largest proportion of exempt organizations, it is not surprising that they also represent the largest proportion of Form 990-T filers. (Nonetheless, based on the returns filed, only 4 percent of all section 501(c)(3) organizations reported UBI for 1995. However, large proportions of both section 501(c)(6) and section 501(c)(7)organizations reported UBI for 1995, 24 percent and 41 percent, respectively. In addition, relatively large proportions of section 501(c)(8) fraternal beneficiary associations and section 501(c)(19) war veterans' organizations also reported gross unrelated business income for 1995, 14 percent and 28 percent, respectively.)

Publications, Services, and Plans for SOI's Nonprofit Sector Statistical Program

Through its nonprofit sector statistical program, the Statistics of Income Division of IRS provides a wide array of data and other information on the various types of organizations that comprise the nonprofit sector. In addition, SOI collects data on related topics, such as charitable giving, charitable bequests, and tax-exempt bonds, as well as a wealth of data in the areas of individual and corporate income and

taxes. These data and information are available through publications, microdata tapes, an electronic bulletin board, and a worldwide website. SOI has ongoing plans to expand and enhance its current nonprofit-sector program. This section describes SOI's publications and statistical services and provides information on how to obtain these publications and access these services. It also discusses recent enhancements to SOI's nonprofit sector statistical program, as well as future plans in this area.

Publications

Data and analyses from all of SOI's nonprofit studies are published in the quarterly *Statistics of Income* Bulletin [18]. In addition, SOI has twice consolidated its nonprofit data and reports in two published volumes of the Compendium of Studies of Tax-Exempt Organizations [19]. The first volume encompasses research on Reporting Years 1974 to 1987, SOI's earliest work related to the nonprofit sector. It includes over 20 reprinted articles and extensive data. The second volume of the Compendium focuses on Reporting Years 1986 to 1990, consolidating SOI's more recent research on nonprofit charitable organizations, private foundations, charitable giving, and section 501(c)(4)-(c)(9) other exempt organizations. It includes 12 reprinted articles and extensive data. Both volumes include articles published in the Statistics of Income Bulletin, as well as those published by SOI staff in the Proceedings of the American Statistical Association, the Independent Sector's Spring Research Forum Papers, and the Journal of Nonprofit Management and Leadership.

Statistical Services

Copies of SOI's microdata tapes for nonprofit organizations are available for purchase from the Statistics of Income Division. Because the Form 990 and Form 990-PF are open to public inspection, these tapes which contain identifiable records, are available for public use. Because tax returns on the unrelated business income of nonprofit organizations are not publicly disclosed, data from Form 990-T returns are not available on tape. Special tabulations can be prepared from all of these sources on request.

Other SOI studies may also be of interest to

analysts of the nonprofit sector. For example, annual data are available on individual and corporate taxes. In addition, certain files of individual tax returns include data on charitable contributions. And, data on estates, which include information on charitable bequests, are published periodically.

In addition to microdata tapes, SOI offers an electronic bulletin board and a site on the worldwide web. Over 1,200 files from various IRS sources and SOI studies, including nonprofit charitable organizations, private foundations and charitable trusts, and other organizations exempt under sections 501(c)(4) through 501(c)(9), are all currently available for public use on a reimbursable basis on the SOI electronic bulletin board. In addition, there are over 700 public use files and other statistical data available on the IRS web page [20].

Plans for SOI's Nonprofit Sector Statistical Program

SOI continues to respond to policy analysis needs related to the nonprofit sector by developing and improving strategies for coding, sampling, and compiling data. Data collection and analysis plans include:

Integrating the National Taxonomy of Exempt Entities (NTEE) coding system with SOI's nonprofit sector studies and the IRS master file of exempt organizations. The National Taxonomy of Exempt Entities was developed as a classification system by the National Center for Charitable Statistics; it uses 26 major groups, which can be aggregated into 10 categories. SOI has applied the codes to its data files, beginning with the Reporting Year 1994 study. In addition, IRS added the NTEE coding system to the exempt organization entity section of the Master File, determining a code for each organization at the time that its application for exemption is approved.

Revising the Standard Industrial Classification (SIC) system. SOI recently assisted with developing the North American Industry Classification System (NAICS) coding system to better reflect the activities of nonprofit organizations. Beginning with Tax Year 1998, tax-exempt organizations will classify activities that generate Unrelated Business Income (UBI) using NAICS codes on Forms 990, 990-PF, and 990-T.

Sampling Form 990 and Form 990-T studies using an integrated matching program. Beginning

with Reporting Year 1993 data, SOI integrated its samples of Form 990 and Form 990-T filers. This allows for the examination of comparable information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations filing both forms, including the 501(c)(3) nonprofit charitable organizations and the 501(c)(4) through (c)(9) other exempt organizations.

Sampling private foundation returns based on fair market value of assets. Beginning with Reporting Year 1994 data, at the request of several users of the data, the SOI sample of private foundation returns was stratified based on fair market value, rather than book value, of total assets. Given that foundation subgroup analyses use asset categories that are constructed using fair market value, this revised sampling strategy will lead to improved subgroup estimates.

Imaging exempt organization returns. The Statistics of Income Division and the office of Employee Plans and Exempt Organizations of the Internal Revenue Service have been working together to develop a new imaging system that will facilitate public access to exempt organizations' information returns. Beginning in July 1998, all Forms 990 and 990-PF filed by organizations classified as taxexempt under subsection code 501(c)(3) of the Internal Revenue Code are being electronically scanned and their images stored at the Ogden Service Center on optical disks. When the system is in full production, researchers will be able to examine financial data for these organizations within 2 months of the date they file with the IRS. Making tax-exempt organizations' information returns more easily available to the public should increase the quality and accuracy of reporting. It is hoped that increased public accessibility and awareness of the financial reporting of these tax-exempt organizations will lead to self policing and result in better overall compliance at minimal costs to the Service.

Comparing nonprofit data. SOI plans to study nonprofit sector data from other statistical sources (e.g., the IRS Business Master file, the Commerce Department's Bureaus of Census and Economic Analysis, and the Federal Reserve Board), reconcile these with SOI data, and publish the results in a future issue of the SOI Bulletin.

Notes and References

- [1] Wolpert, Julian, *Patterns of Generosity in America: Who's Holding the Safety Net*, A Twentieth Century Fund Press, New York, NY, 1993.
- [2] U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, Table 2A.
- [3] Since Reporting Year 1989, SOI has also collected data on section 4947(a)(1) charitable trusts that also file Forms 990-PF. These organizations, like private foundations, have exclusively charitable interests. However, unlike foundations and other 501(c)(3) organizations, they are not exempt from Federal income tax. Charitable trusts are subject to the same requirements as private foundations, including the excise tax provisions and the charitable payout requirement. However, unlike foundations, charitable trusts are not required to receive formal recognition as tax-exempt organizations from the IRS. Most were originally formed as 4947(a)(2) splitinterest trusts that, at one time, had one or more noncharitable beneficiaries. The charitable trusts must pay an annual tax on their income that is not distributed for charitable purposes. For 1995, over 2,700 charitable trusts reported nearly \$3.7 billion in total assets, earned \$411.8 million in total revenues, and distributed \$222.3 million in total charitable contributions, gifts, and grants.
- [4] Sample data on the 501(c)(3) nonprofit charitable organizations for Reporting Year 1995 are based on a stratified probability sample of approximately 12,000 returns, selected from a population of 184,600 returns. The sample was stratified based on book value of total asset, with sampling rates ranging from 0.45 percent for the small asset classes to 100 percent for organizations with assets of \$10 million or more.

Sample data on private foundations for Reporting Year 1995 are based on a stratified probability sample of approximately 6,400 entities (5,600 foundations and 800 4947(a)(1) charitable trusts that file Form 990-PF) that were selected from a population of approximately 52,000 (49,800

foundations and 2,200 trusts). (The 4947(a)(1) charitable trusts that file Form 990-PF are described in footnote 2 above.) The sample was stratified based on both the size of fair market value of total assets and the type of organization (either a foundation or a trust). Foundation returns were selected at rates that ranged from approximately 2.8 percent for small foundations with assets of less than \$100,000 to 100 percent for very large foundations with assets of \$10 million or more.

Sample data on the 501(c)(4) through (c)(9) exempt organizations for Reporting Year 1995 are based on a stratified probability sample of approximately 8,800 returns, selected from a population of approximately 104,700. The sample was stratified based on book value of total assets. Sampling rates ranged from 2.0 percent for the small asset classes to 100 percent for organizations with assets of \$2.5 million or more.

Sample data on the unrelated business income (UBI) of exempt organizations for Reporting Year 1995 are based on a stratified probability sample of approximately 7,300 returns drawn from a population of approximately 36,400 returns. The sample was stratified based on the size of gross unrelated business income. Depending on the amount of UBI, sampling rates ranged from a minimum of 2.6 percent for the lower income returns to a maximum of 100 percent for the higher income returns. In addition, beginning with Reporting Year 1993, the Form 990-T sample was integrated with the Form 990 sample in order to gather comparable information on income and expenses for organizations that filed both forms, including both the 501(c)(3) nonprofit charitable organizations and the 501(c)(4) through (c)(9) other exempt organizations.

- [6] Adjustments for inflation are based on the 1992 chain-type price index for Gross Domestic

- Product from the U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, Table 3.
- [7] The small increase in the number of exempt organizations during the past 20 years, relative to the large increases in assets and revenues, is due, in part, to changes in the filing requirements that raised the minimum level of gross receipts required for filing from \$5,000 to \$10,000 in 1976, and from \$10,000 to \$25,000 in 1982.
- [8] Hodgkinson, Virginia A.; Weitzman, Murray S.; Toppe C.; and Noga, S; Nonprofit Almanac, 1992-1993: Dimensions of the Independent Sector, San Francisco, CA: Jossey-Bass Inc., Publishers, 1992, Table 4.9, p. 160.
- [9] In other parts of this article, when discussing nonprofit charitable organization revenue, adjustments are not made for double-counted contributions.
- [10] Hodgkinson, Virginia A. and Weitzman, Murray S., et al., *Nonprofit Almanac 1996-1997: Dimensions of the Independent Sector*, San Francisco, CA: Jossey-Bass Inc., Publishers, 1996.
- [11] See footnotes 5 and 8.
- [12] Instructions to Form 990 for tax-exempt organizations state that assets are generally to be reported in terms of book value. Investments in securities, however, may be reported as either book value or fair market value.
- [13] For information on the National Taxonomy of Exempt Entities classification system, see Hodgkinson, Virginia A.; Weitzman, Murray S.; et al., Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector, San Francisco: Jossey-Bass, Inc., 1996; Stevenson, David R.; Pollak, Thomas H.; and Lampkin, Linda M.; et al., State Nonprofit Almanac 1997: Profiles of Charitable Organizations, Washington, DC: The Urban Institute, 1997; and The National Taxonomy of Exempt Entities Manual, Washington, DC: The Urban Institute, 1997.

The 26 major group areas of the National Taxonomy of Exempt Entities (NTEE) can be grouped according to 10 major categories. They are listed below.

- I. Arts, Culture, and Humanities (NTEE area A)
- II. Education (B)
- III. Environment and AnimalsEnvironmental Quality, Protection, andBeautification (C)Animal-Related (D)
- IV. Health
 Health--General and Rehabilitative (E)
 Mental Health, Crisis Intervention (F)
 Diseases, Disorders, Medical Disciplines (G)
 Medical Research (H)
- V. Human Services
 Crime, Legal-Related (I)
 Employment, Job-Related (J)
 Food, Agriculture, and Nutrition (K)
 Housing, Shelter (L)
 Public Safety, Disaster Preparedness, and
 Relief (M)
 Recreation, Sports, Leisure, Athletics (N)
 Youth Development (O)
 Human Services--Multipurpose and Other (P)
- VI. International, Foreign Affairs (Q)
- VII. Public, Society Benefit
 Civil Rights, Social Action, Advocacy (R)
 Community Improvement, Capacity Building
 (S)
 Philanthropy, Voluntarism, and Grantmaking
 Foundations (T)
 Science and Technology Research Institutes,
 Services (U)
 Social Science Research Institutes, Services (V)
 Public, Society Benefit--Multipurpose and
 Other (W)
- VIII. Religion-Related (X)
- IX. Mutual/Membership Benefit (Y)
- X. Unknown, Unclassified (Z)
- [14] These measures are calculated only for the nonoperating foundations, since only they are subject to the charitable payout requirement.

[15] The rate of return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation assets. See Salamon, Lester and Voytek, Kenneth, Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance, Washington, DC: The Council on Foundations, 1989, p. 32. The formula is as follows:

Rate of Total Return =

[Ending Fair Market Value of Assets

- Beginning Fair Market Value of Assets
- Contributions Received
- + Grants Paid
- + Operating and Administrative Expenses
- + Excise Tax Paid on Net Investment Income]

DIVIDED BY

[Beginning Fair Market Value of Assets + 50% of Contributions Received]

To calculate the rate of total return, samples of private foundation information returns for consecutive years had to be matched in order to analyze both the beginning-of-year and end-ofyear fair market value data. The beginning-ofyear fair market value of assets for any given year equals the ending fair market value reported on the prior year's information return. Thus, in order to provide a consistent form of measurement by which to compare rates of total return among different years, the ending fair market value of asset amounts (reported for both the year subject to the computation and the prior year) were used to compute the rate of return. In order to obtain an inflation-adjusted real rate of return, the figure equaling the beginning-of-year fair market value of assets was adjusted using the GDP chain-type price index. (See footnote 6.)

[16] Also included in this discussion are the small number of exempt organizations with unspecified subsection codes. However, those organizations exempt under subsections 501(c)(1) and (c)(2) are not included in this discussion

- (although they are included in Table 1.) Subsection 501(c)(1) organizations are corporations organized under an Act of Congress to act as instrumentalities of the United States. Subsection 501(c)(2) organizations are titleholding corporations that generally hold title to the property of other exempt organizations.
- [17] This decline can be explained, in part, due to changes in the filing requirements that raised the minimum level of gross receipts required for filing from \$5,000 to \$10,000 in 1976, and from \$10,000 to \$25,000 in 1982.
- [18] For the most recent published data on 501(c)(3) nonprofit charitable organizations and 501(c)(4) through (c)(9) exempt organizations, see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1994," Statistics of Income Bulletin, Spring 1998, Volume 17, Number 4. For recent data on private foundations, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1994," Statistics of Income Bulletin, Fall 1997, Volume 17, Number 2. For recent data on the unrelated business income of exempt organizations, see Riley, Margaret, "Exempt Organization Business Income Tax Returns: Highlights and an Analysis of Exempt and Nonexempt Finances, 1994," Statistics of Income Bulletin, Spring 1998, Volume 17, Number 4.

¹ The number of organizations reported for 1995 represents those organizations that filed a 1995 return with the Internal Revenue Service through the end of the 1997 calendar year. ² Estimates from 1975 are imputed from 1975 study; for this reason, detail does not add precisely to total.

³ Less than \$500,000.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Data for 1975 are from the 1975 SOI study. Data for 1995, subsection 501(c)(3) through (9) data are from the 1995 SOI study; all other data are from the IRS's administrative master file. Adjustments for inflation are based on the chain-type price index for the Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, Table 7.1

Description of Tax-Exempt Organization Sampling

by Tamara L. Rib

his article describes sample design and sample selection, data capture and cleaning, the method of estimation, and the sampling variability of estimates for the various exempt organization (EO) studies conducted by the Statistics of Income (SOI) Division of the Internal Revenue

Exempt Organization Study Domains

The SOI Division selects annual study samples of many types of tax-exempt organizations. Taxexempt organizations that engage in charitable, educational, religious, and other nonprofit activities usually report financial and other required information on Form 990, Return of Organization Exempt from Income Tax (or the "short" Form 990-EZ), and Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation. Some of these nonprofit organizations must also file a Form 990-T, Exempt Organization Business Income Tax Return to report income from activities that are considered unrelated to their tax-exempt missions. This type of income is taxable; income from related activities is not. For Reporting Year 1998, SOI began selecting an annual study sample of Form 5227, Split-Interest Trust Information Return. This form is used to report financial activities of split-interest trusts.

For each SOI study year of the Form 990 series (990/EZ, 990-PF, 990-T), the sample frame consists of all returns "posted" to the IRS Business Master File (BMF) over a period of 2 years. Returns from the Form 990-series are filed over a period of 12 months. The requirement for when to file depends upon an organization's established annual accounting period; however, extensions of time to file can add several months to the required filing date. It is for this reason that Form 990-series returns are sampled over a 2-year period.

For the Form 5227, the sample frame consists of all returns posted to the IRS BMF over a period of only 1 year. All Forms 5227 are required to file by

Tamara L. Rib is a mathematical statistician for the Exempt Organization Studies for the Statistics of Income Division of the Internal Revenue Service April of the year following the IRS reporting year, which is a calendar year for all filers. Even with extensions of time to file, a 1-year sampling period is sufficient.

Amended returns are not included in the EO studies because the original returns had already been subjected to sampling. Returns that change because of IRS examinations are also excluded.

Sample Design and Selection

The sample design is a stratified probability sample. For each study, stratification is carried out as follows:

- 1. The Form 990/990-EZ returns are stratified by organizations exempt under Internal Revenue Code (IRC) section 501(c)(3) or the IRC section 501(c)(4)-(9) group, and size of assets based on book value. The sample excludes those returns with gross receipts less than \$25,001, the filing threshold. For Reporting Year 1996 only, organizations exempt under IRC section 501(c)(4)-(9) were excluded because of budgetary restrictions.
- 2. The Form 990-PF returns are stratified by organizations defined as a private foundation or a "nonexempt charitable trust" treated as a private foundation, and size of assets. For Reporting Year 1994 and later years, size of assets is based on fair market value. Prior to Reporting Year 1994, size of assets was based on book value.
- 3. The Form 990-T returns are stratified by size of gross unrelated business income (GUBI). Prior to Tax Year 1992, net income was used as the stratifier. The sample includes only those returns that had GUBI greater than or equal to \$1,000, the filing threshold. Beginning with Tax Year 1993, joint strata samples from the Form 990-T and the Form 990 have been selected. The sample design is based on size of GUBI and the strata from the Form 990 when both a Form 990 and 990-T with the same Employer Identification Number (EIN) have been filed. An integrated match is done between the Form 990-T returns and the Form 990 returns. Sample strata are labeled with sample codes from both forms. This results in numerous sample strata, which are later consolidated into a smaller number of sample groups for weighting purposes. For Tax Year 1996 and later years, the Form 990-T sample only matched to the Form 990 IRC subsection (c)(3)s. After Tax Year 1995, Form 990 subsection (c)(4)-(9)'s were excluded.

Description of Tax-Exempt Organization Sampling

4. The Form 5227 returns are stratified by organizations defined as charitable remainder annuity trusts, charitable remainder unitrusts, lead trusts, or pooled income funds, and size of assets. For Reporting Year 1998 and 1999, only charitable remainder annuity trusts and charitable remainder unitrusts were sampled. Also, for those reporting years, the size of assets was based on fair market value. Review of this data proved that better estimates were achieved by using size of assets based on book value. For Reporting Year 2000 and later years, size of assets are based on book value only, unless book value assets are less than 10 million dollars and fair market value assets are greater than 50 million dollars.

Neyman allocation is used to assign the designated sample to the stratum. A Bernoulli sample is selected independently from each stratum with rates ranging from less than one percent for the small asset or income classes to 100 percent for the organizations with very large assets or income.

Each return posted to the BMF and belonging to the sample frame is assigned to a stratum and then subjected to sampling. The BMF-SOI "transform" method is based on the EIN assigned to each exempt organization. A unique random number, called the transformed taxpayer identification number (TTIN), is calculated for each EIN and then compared to a range of numbers based on a return's selection rate. If the number falls within that range, the return is selected. The formula that generates the TTIN does not change from year to year. Therefore, once an exempt organization is selected for the sample, it will be selected into the sample every subsequent year providing the organization's assets fall in a stratum with the same or higher rate.

Data Capture and Cleaning

When an exempt organization return is filed, selected data items are computer entered for administrative purposes to determine correct reporting information. All data are then transmitted to the IRS Business

Master File (BMF) system. This database serves as the SOI sampling frame. Data are updated on a weekly basis to the BMF; therefore, the SOI sample is selected as the returns are being processed.

EO data are extracted directly from the tax or information return. The SOI data-capture process allows the data to be entered into a database where consistency tests and error resolution tests are run. Problems that arise include returns that are out of scope, sampled in error, or misclassified. The misclassified returns have SOI-generated sample codes different from the sample codes assigned during BMF processing. Tests also check for returns with data inconsistencies, such as items not adding to the correct totals.

Estimation

Each selected return is weighted to reflect the entire population. This weight is computed by dividing the population count of filed returns in a given stratum by the number of sample returns for that same stratum, after adjusting for rejected returns, missing returns, and outliers. A missing return may occur if some other IRS function retrieves the return, and it cannot be located by SOI after selection. The weights are used to produce aggregate estimates for items of interest such as assets, liabilities, revenue, and expenses.

Sampling Variability

Any sample selected for the EO studies is one of any number of samples that could have been selected using the same sample design. The estimates calculated from the different samples would vary. The standard error (SE) of the estimate is a measure of the variation among the estimates of all possible samples. The SE is usually expressed as a percent of the value being estimated. This ratio is called the coefficient of variation (CV), which is the SE divided by the estimate. The use of CV's is explained in the Appendix to this volume, "SOI Sampling Methodology and Data Limitations."

Introduction

onprofit charitable organizations, those exempt under section 501(c)(3) of the Internal Revenue Code, include organizations whose purposes are religious, charitable, educational, scientific, or for the purpose of testing for public safety. These organizations can receive tax-deductible contributions and must serve the public interest in a manner that supports their charitable mission. This group includes, among others, schools and universities, hospitals and other health-related organizations, religious organizations, and publicly-supported charities. Certain other taxexempt organizations, those exempt under sections 501(c)(4) through (c)(9), are included in the articles and tables (with the exception of Reporting Year 1996). This group includes civic leagues and social welfare organizations, labor organizations, business leagues, recreational and social clubs, fraternal beneficiary associations, and voluntary employee beneficiary associations. Unlike organizations exempt under section 501(c)(3), these organizations, in most cases, are not eligible to receive tax-deductible contributions.

This section presents articles and tables on nonprofit charitable and other tax-exempt organizations for Tax Years 1989 through 1998. The data come from samples of the Form 990, *Return of Organization Exempt from Income Tax*, and Form 990-EZ, the short form version of this information return. The latter form may be completed by smaller organizations, those with end-of-year assets of \$25,000 or less, and gross receipts of \$25,000 to \$100.000.

Nonprofit charitable organizations exempt from income tax under Internal Revenue Code section 501(c)(3) filed over 207,000 information returns for 1998, and increase of 4 percent from the previous year. These organizations reported \$1.4 billion in assets, a decrease of 6 percent from 1997, and

\$752.0 in revenue, slightly less than the previous year. These statistics exclude private foundations, most organizations with receipts totaling less than \$25,000, as well as most churches and certain other types of religious organizations.

Program Developments

The SOI program on nonprofit charitable and taxexempt organizations has expanded and evolved during the 1990's. Beginning with Tax Year 1994, SOI began classifying nonprofit charitable organizations using the National Taxonomy of Exempt Entities (NTEE), developed by the National Center for Charitable Statistics [1]. This system classifies organizations based on their institutional purpose and major activity. Detailed information on the incomeproducing activities of tax-exempt organizations was collected for the first time for Tax Year 1990. For 1992, compensation data for officers, directors, trustees, and other highly-paid employees were included in the SOI program for the first time. For Tax Year 1997, there were two major additions to the data: a worksheet that reconciles revenue and expenses on organizations' financial statements with the values reported on the Form 990; and detailed information on lobbying expenditures by 501(c)(3) organizations.

[1] For information on the National Taxonomy of Exempt Entities classification system, see Hodgkinson, Virginia A., Weitzman, Murray S., et al., Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector, Jossey-Bass, Inc., 1996; Stevenson, David R., Pollak, Thomas H., and Lampkin, Linda M., et al., State Nonprofit Almanac 1997: Profiles of Charitable Organizations, The Urban Institute, 1997; and The National Taxonomy of Exempt Entities Manual, The Urban Institute, 1997.

by Cecelia Hilgert and Paul Arnsberger

he revenue and assets of nonprofit charitable organizations exempt from Federal taxation under Internal Revenue Code section 501(c)(3), excluding private foundations and most religious organizations, showed continued increases for 1989. Total revenue rose by 12 percent to \$398.6 billion, of which the organizations' program service activities provided more than two-thirds (\$272.1 billion) of the total. Total assets also grew, by 12 percent, to \$655.4 billion. There were 133,157 returns filed for 1989, which represented a 7percent increase from 1988. These statistics are based on data from Form 990, Return of Organization Exempt from Income Tax, and Form 990EZ, the short form of the return. This latter form was introduced for 1989 for smaller organizations, those with gross receipts of less than \$100,000 and end-of-year assets less than \$250,000. Data on organizations that are exempt under Code sections 501(c)(4) through (9) are also presented in the second part of this article. For 1989, there were 96,438 returns filed by these organizations, reporting \$101.7 billion of total revenue, and \$126.7 billion of total assets.

Organizations Exempt Under Section 501(c)(3)

Internal Revenue Code section 501(c) classifies nonprofit organizations into 25 categories, each of which is dealt with in a separate subsection. Some of the organizations may be eligible for tax-deductible donations under section 170 of the Code. Those nonprofit charitable organizations exempt under section 501(c)(3) receive the largest part of tax-deductible donations and services. They are organizations whose purposes are religious, charitable, educational, scientific, or related to public safety testing. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these organizations include nonprofit hospitals, nonprofit universities and schools, youth organizations, community fundraising campaigns, public charities, and environmental support groups. In addition, the organizations must serve the "public good," as opposed to private interests, and thus may not distribute their net earnings to a private shareholder or individual. They are also restricted from activities that can influence legislation, and they cannot participate in any political campaign on behalf of, or in opposition to, any candidate for political office.

Only 133,157 of the 394,953 active nonprofit charitable organizations exempt under section 501(c)(3) were required to file information returns on Forms 990 or 990EZ for 1989 [1]. The remainder were either religious organi-

Cecelia Hilgert and Paul Arnsberger are economists with the Foreign Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief. zations, which are not required to file; or small organizations with annual gross receipts of less than \$25,000, the filing threshold. Selected data from Form 990EZ are shown separately because the line items on the form are not the same as on the longer Form 990. (Where possible Form 990 data and Form 990EZ data are combined, such as in Figure A.)

Selected Data for Nonprofit Charitable Organizations, Reporting Years 1987-1989

[Money amounts are in billions of dollars]

Item	1987	1988	1989
	(1)	(2)	(3)
Number of returns	122,018	124,232	133,157
Total assets	529.5	583.6	655.4
Total revenue	310.8	354.6	398.6
Program service revenue	211.9	239.3	272.1
Contributions, gifts, and grants	61.7	69.1	77.0
Dues and assessments	4.2	4.0	4.7
Other	33.0	42.3	44.8
Total expenses	288.7	330.8	371.5

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding.

The number of returns filed showed a larger increase (7 percent) for 1989 than had been registered for 1988, when there was a 2-percent increase over the previous year [2]. This overall increase for 1989 was evident for both the smallest-size organizations, those with assets of less than \$500,000, and for the largest ones, those with assets of \$10 million or more. Both of these size categories showed a gain of 7 percent in the number of returns filed for 1989 over 1988. Organizations with assets of less than \$500,000 accounted for more than two-thirds of all the returns filed for 1989, while the largest organizations accounted for 5 percent [3].

The total assets held by nonprofit charitable organizations increased by 12 percent for 1989 to \$655.4 billion [3]. This was greater than the 10-percent increase registered in total assets from 1987 to 1988. In constant dollars, assets increased by 34 percent since 1985, which is twice as great an increase as that of the real gross domestic product over the same period. Organizations with asset holdings of \$50 million or more accounted for 70 percent of the assets in 1989 (Figure B). This size class registered a gain of 15 percent in total assets from 1988. For small organizations, with assets of less than \$500,000, total asset holdings increased by 8 percent from their 1988 level. Liabilities of all nonprofit charitable organizations registered \$293.8 billion, up from \$257.6

Figure B

\$50,000,000 or more	2,133	1.6	458,619	70.0	243,782	61.1

Includes returns with zero assets or assets not reported.

Æstimates should be used with caution because of the small number of sample returns on which they are based.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding.

billion for 1988. The balance sheet of a tax-exempt organization does not have an owner's equity section; instead, earnings accrue to a "net worth/fund balance" account. The total fund balance for nonprofit charitable organizations was \$361.6 billion, up from \$329.5 billion for 1988.

In terms of revenue, program service revenue--the fees collected by organizations for the programs operated in support of their tax-exempt purposes--represented more than two-thirds of the total. Contributions, gifts, and grants accounted for another 19 percent of revenue. The largest asset-size class, \$50 million or more, accounted for the largest proportion of total revenue, 61 percent; organizations in this size class reported total revenue of \$243.8 billion, 15 percent more than 1988. Program service revenue was the largest proportion of the total revenue of the larger organizations, those with total assets of \$10 million or more, accounting for about three-quarters of the total reported by these organizations (Figure C). In contrast, contributions, gifts, and grants comprised onehalf of the revenue reported by the smaller organizations, those with assets under \$1 million. In constant dollars, program service revenue grew by 41 percent after 1985, and contributions, gifts, and grants, by 20 percent. For the 1988-1989 period, these two items grew by 14 percent and 11 percent, respectively, using current dollars.

Types of Nonprofit Charitable Organizations

Figures D, E, and F present information on the types of nonprofit charitable organizations exempt under section 501(c)(3) that filed Form 990 or Form 990EZ (short form) for 1989. The information was based on responses to a question on the return forms identifying the reason why the organization was not classified as a private foundation. In contrast to a nonprofit charitable organization, a private

foundation is narrowly supported and controlled, usually by an individual, family, or corporation, as opposed to an organization receiving broad support from a large number of sources within the general public [4].

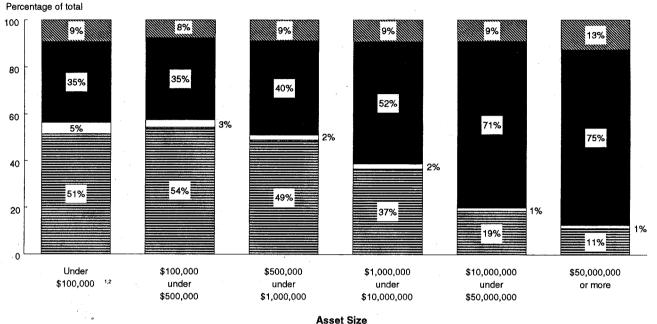

Hospitals were the leading category of nonprofit charitable organization in terms of assets and revenue. Their assets totaled \$189.7 billion and their revenue, \$179.2 billion, which represented increases of 11 percent and 14 percent, respectively, over 1988. Hospitals accounted for 29 percent of the assets and 45 percent of the revenue totals reported for nonprofit charitable organizations. Nearly all of their revenue, 93 percent, was program service revenue.

Educational institutions were the second leading type of nonprofit charitable organization in terms of assets, with \$156.3 billion, reporting one-quarter of the total, and third leading type of organization in terms of revenue, with \$69.5 billion, 17 percent of the total. Included in this category were primary and secondary schools (both public and private), colleges and universities, professional and trade schools, and other organizations with educational activities of instruction.

"Publicly-supported organizations" were the third leading type of nonprofit organization in terms of assets, with \$144.2 billion, and second in terms of revenue, with \$107.5 billion, accounting for 22 percent and 27 percent of the respective totals. This category was comprised of organizations which normally receive a substantial part of support from a governmental unit, or from the general public in the form of contributions or revenue from their exempt function services and products (program service revenue). Types of organizations that generally qualify include organizations such as the American Red Cross or United Way and their affiliated agencies; voluntary health agencies such as the American Cancer Society and the

American Heart Association; organizations engaged in educational or sports activities for youth; performing arts societies (such as ballet companies, symphony orchestras); nursing homes or homes for the aged that provide health care or domiciliary services to residents in the facilities; membership organizations that produce magazines and other educational material for their members; organizations that provide various forms of counseling; and other organizations providing a direct service to the general public. While program service revenue accounted for 60 percent of the revenue of educational institutions, it was less than one-half of the total revenue of publicly-supported organizations. Instead, these organizations received nearly two-thirds of their 1989 total through contributions, gifts, and grants.

A fourth type of nonprofit charitable organization, one that supports other charitable organizations, reported \$142.8 billion in assets and \$32.5 billion in revenue. When this type of organization is combined with the three mentioned above, the results represented 97 percent of both total assets and total revenue of all nonprofit charitable organizations for 1989. The other types of organizations, as shown in Figure D, represented the remaining 3 percent [5].

Financial Characteristics of Nonprofit Charitable Organizations Filing Form 990

There were 114,724 organizations that filed the long Form 990 for 1989 (Table 1). While those with assets of \$50 million or more represented fewer than 2 percent of the number of these returns, they accounted for 70 percent of the assets of nonprofit charitable organizations and 61 percent of the revenue. Organizations with assets of \$1 million or more accounted for one-quarter of the number of returns, and they reported 97 percent of the assets and 90 percent of revenue. Figures G and H show revenue and asset data for the ten largest 501(c)(3) organizations.

NOTE: Nonprofit charitable organizations exclude private foundations and most religious organizations.

major components of assets included investments in securities, \$203.2 billion; and land, buildings, and equipment, \$199.0 billion, representing 31 percent and 30 percent, respectively, of total assets. Investments in securities registered a gain of 16 percent for 1989. Liabilities were \$293.7 for 1989, with mortgages and other notes payable accounting for 41 percent.

While investments in securities was the largest asset holding for all organizations filing Form 990, representing nearly one-third of the total, the types of asset holdings varied by the size of nonprofit charitable organization. For the smaller organizations, with assets of less than \$500,000, cash and savings was the largest single component, accounting for 42 percent of their total assets. In

contrast, for the organizations with assets of between \$1 million and \$10 million, land, buildings, and equipment was the largest asset type, 38 percent of the total. For the larger organizations, those with assets of \$10 million or more, investments in securities represented the largest single type of holding, accounting for one-third of the assets of these organizations.

Revenue and Expenses

Program service revenue, which is generated through programs operated by nonprofit charitable organizations in support of their tax-exempt purposes, provided the largest source of revenue for these organizations. Program service revenue for 1989 was \$271.9 billion, or 68 percent of total revenue. Some examples of program service revenue include tuition and fees at educational institutions, hospital patient care charges (including Medicare and Medicaid payments), admission fees collected by museums or community performing arts groups, YMCA/YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. Program service revenue accounted for three-quarters of the total revenue reported by organizations with asset holdings of \$10 million or more, while for organizations with asset holdings of between \$1 million and \$10 million, it was one-half of

Nonprofit charitable organizations reported \$76.5 billion in contributions, gifts, and grants, representing 19 percent of the total revenue for long form filers (Figure I).

The total was comprised of \$35.8 billion received in direct public support, \$33.7 billion from Government grants, and \$7.0 billion from indirect public support. This last category includes revenue received through solicitation campaigns conducted by federated fundraising agencies. Contributions, gifts, and grants as a percentage of total revenue varied depending on the size of the organization. Organizations with assets of \$10 million or more depended on this source for just 13 percent of their total revenue. In contrast, organizations with assets of less than \$1 million depended on contributions, gifts, and grants for 52 percent of their total revenue.

Nonprofit charitable organizations report their detailed expenses on Form 990 by "functional categories" (salaries and wages, pension plan contributions and other employee benefits, legal fees, supplies, and the like) which are then combined into broad categories on Form 990: program services, management and general, and fundraising (Table 2). Total expenses reported were \$370.7 billion for 1989. For all organizations, those expenses relating to specific program services accounted for 85 percent of the total, with salaries and wages the largest single component. Management and general expenses, which supported the overall organization rather than specific programs, amounted to \$50.0 billion. Fundraising expenses and payments to affiliates together comprised only 1 percent of total expenses. (Payments to affiliates are payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies.)

Financial Characteristics of Nonprofit Charitable Organizations Filing Form 990EZ

In 1989, Form 990EZ was introduced for tax-exempt organizations with gross receipts of less than \$100,000 and assets of less than \$250,000 for the year [6]. (Table 5 presents detailed data on Form 990EZ filers.) There were 18,433 Form 990EZ returns filed by nonprofit charitable organizations (Figure J). They accounted for 14 percent of the total number of returns filed by nonprofit charitable organizations that were exempt under Code section 501(c)(3). Most of the Form 990EZ filers, 86 percent, were organizations with assets of less than \$100,000; the remainder had assets of \$100,000 to \$250,000.

Organizations filing Form 990EZ reported total revenue of \$926 million, one-half of which was derived from contributions, gifts, and grants. Program service revenue amounted to \$232 million, one-quarter of the total. Expenses were \$829 million. Of the asset total of \$794 million, nearly two-thirds was in cash, savings, and investments. Total revenue and assets reported on Form 990EZ represented only 0.2 percent and 0.1 percent, respectively, of the totals for all nonprofit charitable organizations exempt under Code section 501(c)(3). Three-quarters of Form 990EZ filers were publicly-supported organizations.

Organizations Exempt under Sections 501(c)(4) through (9)

The statistics presented in this section are based on the 96,438 Forms 990 and 990EZ filed by organizations taxexempt under Internal Revenue Code sections 501(c)(4) through (9). Figure K provides general descriptions of the organizations included under these sections. Unlike the nonprofit charitable organizations tax-exempt under Code section 501(c)(3), most of these organizations are not eligible for tax-deductible contributions. Financial data for organizations covered by these six Code sections are presented in Tables 3, 4, and 5. Figure L compares selected data for 1988 with 1989. Most organizations exempt under these sections reported modest increases for most items for 1989, although some showed more significant changes. Business leagues, chambers of commerce, and real estate boards, all exempt under section 501(c)(6), for example, reported a 23.4 percent increase in the total liabilities recorded on their balance sheets.

For 1989, business leagues, chambers of commerce, and real estate boards filed the largest number of returns (21,545) of organizations exempt under sections 501(c)(4) through (9). Civic leagues and social welfare organizations (section 501(c)(4)), and labor, agricultural, and horticultural organizations (section 501(c)(5)) were close behind (Figure L). The number of returns filed by

NOTE: Detail may not add to totals because of rounding.

organizations exempt under sections 501(c)(4) and 501(c)(6) increased by 10.1 and 8.4 percent, respectively, from 1988, while organizations exempt under section 501(c)(5) showed a slight decrease (0.2 percent).

With the exception of voluntary employees' beneficiary associations (section 501(c)(9)), more than 80 percent of the returns filed under each Code section represented organizations with assets of less than \$500,000, while less than 0.5 percent represented organizations with assets of \$50 million or more (Figure M). Thus, in comparison to nonprofit charitable organizations, organizations filing under these six sections tended to be smaller (two-thirds of the total returns filed by nonprofit charitable organizations reported assets less than \$500,000). Voluntary employees' beneficiary associations reporting asset holdings of less than \$500,000 represented just over 60 percent of all returns filed by these organizations. Those with assets of \$10 million or more filed over 5 percent of the returns under section 501(c)(9), a greater proportion than the number filed under any of the other five Code sections.

Revenue and Expenses

In terms of revenue, voluntary employees' beneficiary associations (section 501(c)(9)) reported considerably more revenue for 1989 than that reported by any of those filing under the other five Code sections (Figure N). The

\$45.3 billion reported by these associations represented a 12.1 percent increase from 1988 and was nearly triple the next highest amount for the six Code sections. Most of the revenue (over 82 percent) for these organizations was in the form of program service revenue, which in this case took the form of payments for health and welfare benefits coverage. Voluntary employees' beneficiary associations also reported by far the highest level of expenses, \$44.3 billion (of which over 84 percent was for health and welfare benefits paid to their members).

Civic leagues and social welfare organizations (section 501(c)(4)), which ranked second in terms of total revenue with \$16.5 billion, also received the majority (\$10.8 billion) of their revenue from program services, as did fraternal beneficiary associations (section 501(c)(8)), though on a much smaller scale (\$5.0 billion out of the \$6.3 billion). For 1989, this latter group reported decreases in total revenue and total assets of 1.3 percent and 3.9 percent, respectively.

Membership dues and assessments were the principal source of revenue for three types of organizations: labor, agricultural, and horticultural organizations (section 501(c)(5)--\$7.6 billion); business leagues, chambers of commerce, and real estate boards (section 501(c)(6)--\$6.8 billion); and social and recreational clubs (section 501(c)(7)--\$3.2 billion). For each of these categories, total expenses grew at a rate higher than that for total

revenue, from 1988 to 1989. Organizations exempt under Code section 501(c)(6), for example, reported a 19.8 percent increase in total expenses to \$16.0 billion for 1989, slightly more than the \$15.9 billion generated from an 11.7 percent increase in total revenue. Revenue of organizations with assets of less than \$500,000 under each of these Code sections accounted for greater percentages of total revenue than the revenue of nonprofit charitable organizations (section 501(c)(3)) of a similar size. These percentages ranged from 10.5 percent for civic leagues and social welfare organizations (section 501(c)(4)) to 24.9 percent for labor, agricultural, and horticultural organizations (section 501(c)(5)) (Figure O). Fraternal beneficiary associations (section 501(c)(8)) were the only organizations covered under these code sections for which organizations with assets \$50 million or more predominated in terms of total revenue (75.4 percent).

Assets and Liabilities

Figure P shows that for 1989 civic leagues and social welfare organizations (section 501(c)(4)) reported the largest asset holdings, \$33.0 billion; those with assets of \$10 million or more accounted for 78.4 percent of the total assets reported by these organizations. Voluntary employees' beneficiary associations (section 501(c)(9)) and fraternal beneficiary associations (section 501(c)(8)) ranked second and third with \$29.4 billion and \$25.2 billion in assets, respectively. (Organizations with assets of \$10 million or more accounted for 87.7 percent of the total assets held by fraternal beneficiary associations; 70.2 percent, for those held by voluntary employees' beneficiary associations.) While most types of organizations exempt under these six Code sections reported

modest increases in total assets (6.9 percent), business leagues, chambers of commerce and real estate boards (section 501(c)(6)), and social and recreational clubs (section 501(c)(7)) showed more significant increases of 13.8 percent and 10.0 percent, respectively.

The types of assets held by the various organizations varied considerably by Code section (Figure Q). (Detailed data on the components of assets are limited to those organizations that filed the longer Form 990; as mentioned earlier, only condensed balance sheets were filed for the smaller-size organizations that filed the shorter Form 990EZ.) Investments in securities was the largest single component of assets reported by labor, agricultural, and horticultural organizations (section 501(c)(5)); fraternal beneficiary associations (section 501(c)(8)); and voluntary employees' beneficiary associations (section 501(c)(9)). On the other hand, most of the assets for social and recreational clubs (section 501(c)(7)) were in the form of land, buildings, and equipment, while only 2 percent were in securities.

Shown in Figure R are the net worth/fund balance totals for organizations under the six Code sections. This account varied as a percentage of total assets depending on the type of organization, and ranged from 20.1 percent for fraternal beneficiary associations (section 501(c)(8)) to 83.5 percent for labor, agricultural, and horticultural organizations (section 501(c)(5)).

Sections 501(c)(4)-(9) Organizations Filing Form 990EZ

As mentioned above, the Form 990EZ was introduced in 1989 for organizations exempt under Internal Revenue Code section 501(c) with annual gross receipts of less

than \$100,000 and assets under \$250,000. Use of the new form varied significantly among the types of organizations. There were 17,652 Forms 990EZ filed for 1989 by organizations tax-exempt under sections 501(c)(4)-(9). Figure S shows that 5,049 Forms 990EZ were filed by civic leagues and social welfare organizations (section 501(c)(4)), representing 23.8 percent of their total returns. On the other hand, voluntary employees' beneficiary associations (section 501(c)(9)) filed only 481 Forms 990EZ, 5.0 percent of the total. Cash, savings, and investments was the principal asset account reported by the Form 990EZ filers, except for social and recreational clubs (section 501(c)(7)) which reported 57.9 percent of their assets in the form of land and buildings. Fraternal

beneficiary organizations (section 501(c)(8)) and voluntary employees' beneficiary organizations (section 501(c)(9)) filing Form 990EZ reported program service revenue as the primary source of income. Organizations tax-exempt under the other four Code sections that filed the shorter form ranked membership dues and assessments as the top source of revenue. (Table 5 presents detailed data on Form 990EZ filers.)

Summary

For 1989, nonprofit charitable organizations tax-exempt under section 501(c)(3) continued to report increased growth. Revenue increased to \$398.6 billion, up from \$354.6 billion for 1988, a gain of 12 percent; assets were \$655.4 billion, up from \$583.6 billion for 1988, also an increase of 12 percent. Hospitals as a group led all other types of organizations in both revenues and assets. The number of returns filed by nonprofit charitable organizations was 133,157, which included both the longer Form 990 (114,724) and the shorter Form 990EZ (18,433). This latter form was introduced for 1989 for organizations with gross receipts of less than \$100,000 and assets of less than \$250,000.

Program service revenue, the fees received for the programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3) were granted, was \$272.1 billion, or two-thirds of the revenue for 1989. Contributions increased to \$77.0 billion from \$69.1 billion. This source of revenue accounted for more than one-half of the revenue for organizations with asset holdings of less than \$1 million, but for a much smaller share for larger organizations. Expenses continued to rise, to \$371.5 billion, of which 85 percent was in support of the organizations' program services.

Organizations exempt under Internal Revenue Code sections 501(c)(4) through (9) are diverse in both their function and financial characteristics. Three types of organizations exempt under these sections, business leagues, chambers of commerce, and real estate boards (section 501(c)(6)); civic leagues and social welfare organizations (section 501(c)(4)); and labor, agricultural, and horticultural organizations (section 501(c)(5)), each filed over 20,000 Forms 990 and 990EZ. In terms of total assets, civic leagues and social welfare organizations (section 501(c)(4)) reported the most, followed by voluntary employees' beneficiary associations (section 501(c)(9)) and fraternal beneficiary associations (section 501(c)(8)). For each of the six Code sections, smaller organizations (assets less than \$500,000) accounted for a greater share of total assets than similar sized nonprofit charitable organizations exempt under section 501(c)(3).

Civic leagues and social welfare organizations (section 501(c)(4)); fraternal beneficiary associations (section 501(c)(8)); and voluntary employees' beneficiary associations (section 501(c)(9)) reported program service revenue as their primary source of revenue. Labor, agricultural, and horticultural organizations (section 501(c)(5)); business leagues, chambers of commerce and real estate boards (section 501(c)(6)); and social and recreational clubs (section 501(c)(7)), on the other hand, each reported membership dues and assessments as their principal source of revenue.

Data Sources and Limitations

The statistics in this article are based on a sample of the 1989 Form 990, Return of Organization Exempt from Income Tax, and Form 990EZ, the short form. Organizations used the 1989 Form 990 when their accounting periods ended during the time period, December 31, 1989, through November 30, 1990. The sample did not include private foundations, which were required to file on a separate return form. The sample included only those returns with receipts of more than \$25,000, the filing threshold. The sample design was split into two parts: the first included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations exempt under other sections were not included in the study.

Each part of the sample was classified into sample strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 11,401 returns was selected from a

population of 135,472. All returns with assets of \$10 million or more were included. Lower sampling rates were used in the smaller asset classes. For organizations filing under sections 501(c)(4) through (9), a sample of 10,800 returns was selected from a population of 97,301. Sampling rates ranged from 2.35 percent to 100 percent.

The data presented were obtained from returns as originally filed. In most cases, changes made to the original return as a result of either administrative processing or a taxpayer amendment were not incorporated into the data base. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix in this issue.

Notes and References

- [1] Data presented in this article are from 1989 Forms 990 and 990EZ. Organizations used the 1989 Form 990 when their accounting periods ended during the time period, of December 31, 1989, through November 30, 1990. The total number of nonprofit charitable organizations, including those not required to file Form 990 or Form 990EZ, was obtained from the Internal Revenue Service Exempt Organizations Business Master File, as reported in *Monthly Exempt Organizations Statistical Summary*, and does not include private foundations filing Form 990-PF.
- [2] Data for previous years were published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. See also Hilgert, Cecelia and Arnsberger, Paul, "Charities and Other

Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based. Includes organizations with end-of-year total assets less than \$250,000 and gross receipts less than \$100,000 not filling a Form 990EZ.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Data Release

he Internal Revenue Code classifies tax-exempt, nonprofit organizations into 31 groups, some of which are eligible to receive tax-deductible donations under Code section 170 [1]. One of these groups, organizations that are exempt under section 501 (c)(3), receives the largest part of tax-deductible donations. This data release discusses them and also the organizations that are exempt under sections 501(c)(4) through (9).

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

Organizations that are exempt under section 501(c)(3) are those whose purposes are religious, charitable, scientific, or are for the purpose of testing for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, exempt organizations may not distribute net earnings to a private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign on behalf of, or in opposition to, any candidate for political office.

The revenue and assets of organizations exempt under Internal Revenue Code section 501(c)(3), excluding private foundations and religious organizations, continued to increase for 1990 [2]. Total revenue rose by 9 percent to \$435.6 billion, and total assets grew to \$697.3 billion, an increase of 6 percent (Figure A). These statistics are based on data from Form 990, *Return of Organization Exempt from Income Tax*, and Form 990EZ, the short form [3].

Of the 416,209 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 141,757 returns filed for 1990 [4]. (Those not required to file included religious organizations and organizations with annual gross receipts of less than \$25,000.) The number of returns filed showed a 6-percent increase from 1989. This substantial increase was due mainly to the larger number filed by smaller organizations, those with assets of less than \$1 million. These organizations represented more than three-quarters

This data release was written by Cecelia Hilgert, an economist with the Foreign Special Projects Section, under the direction of Michael Alexander, Chief.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

of the returns filed for 1990. The number of Form 990EZ returns increased to about 20 percent of total returns filed, up from about 10 percent in 1989, the year for which the short form was introduced for organizations with gross receipts of less than \$100,000 and assets of less than \$250,000. (Tables 1 and 2).

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) Through (9)

Unlike the nonprofit charitable organizations that are taxexempt under section 501(c)(3), most of the organizations exempt under section 501(c)(4) through (9) are not eligible for tax-deductible contributions. They are quite diverse in their program activities, as well as in their organizational structures.

Three types of organizations exempt under these sections--civic leagues and social welfare organizations, section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and business leagues, chambers of commerce, and real estate boards, section 501(c)(6)--each filed over 21,000 Forms 990 and 990EZ for 1990 (Figure B). Together, these three categories represented two-thirds of the returns filed by all organizations included in these six Code sections. Civic leagues and social welfare organizations showed the largest increase, with a 6-percent gain in the total number of returns filed. The short forms (990EZ) represented one-third of the returns filed by all organizations under this Code section.

Civic leagues and social welfare organizations, and voluntary beneficiary associations, section 501(c)(9), reported the most assets for 1990, about \$35.1 billion and \$33.0 billion, respectively. The largest of these organiza-

[Money amounts are in billions of dollars]

Internal Revenue Code section	Number of returns	Total assets	Total liabilities	Total fund balance or net worth	Total revenue	Total expenses
	(1)	(2)	(3)	(4)	(5)	(6)
501(c)(4) 501(c)(5) 501(c)(6) 501(c)(7) 501(c)(8) 501(c)(9)	22,496 21,353 21,875 15,615 8,791 9,534	35.1 13.7 19.3 9.3 30.0 33.0	25.2 2.3 11.5 3.0 24.4 11.7	9.9 11.4 7.8 6.4 5.6 21.3	18.0 12.4 18.0 6.1 7.2 55.2	17.2 12.0 17.7 5.9 6.9 54.0

NOTE: Detail may not add to totals because of rounding and processing tolerances.

tions--those with assets of \$10,000,000 or more--represented more than 70 percent of the total assets of the organizations exempt under these two sections. Fraternal beneficiary associations, section 501(c)(8), showed the largest rise in assets, 19 percent, from \$25.1 billion for 1989 to nearly \$30.0 billion for 1990, due primarily to increases in holdings of securities. For each of the six Code sections for which statistics are shown, organizations with assets of less than \$1,000,000 accounted for a greater percentage of total assets than similarly-sized nonprofit charitable organizations exempt under section 501(c)(3).

All organizations exempt under these six Code sections registered increases in revenue for 1990. Program service revenue was the primary type of revenue under four of the Code sections: civic leagues and social welfare organizations; business leagues, chambers of commerce, and real estate boards; fraternal beneficiary associations; and voluntary beneficiary associations. For business leagues, chambers of commerce, and real estate boards, 1990 was the first year for which program service revenue exceeded membership dues and assessments as a source of revenue. While program service revenue is generally composed of fees for services on which the tax exemption is based, including hospital and tuition charges in the case of charitable organizations, for fraternal beneficiary associations and voluntary beneficiary associations, the program

service revenue was, instead, payments for health and welfare benefits coverage. Organizations under the other two sections--labor, agricultural and horticultural organizations, and social and recreational clubs, section 501(c)(7)--reported membership dues and assessments as their leading source of revenue.

Tables 1 and 2 present selected income statement and balance sheet items for Form 990 and Form 990EZ filers, respectively, under Code sections 501(c)(3) through (9). Because less information is required of smaller organizations filing Form 990EZ, the items shown in Tables 1 and 2 do not always match.

Notes and References

- [1] These groups are defined further in the following Internal Revenue Code sections: 401(a), 408(e), 501(c) (2)-(25), 501(d)-(f), and 521(a).
- [2] For information on private foundations see Meckstroth, Alicia, "Private Foundations and Charitable Trusts, 1990," *Statistics of Income Bulletin*, Winter 1993-1994, Volume 13, Number 3, pp. 32-79.
- [3] Data for previous years were published in *Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987,* and *Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2.* See also Hilgert, Cecelia, and Arnsberger, Paul, "Charities and Other Tax-Exempt Organizations, 1989," *Statistics of Income Bulletin,* Winter 1993-1994, Volume 13, Number 3, pp. 80-93.
- [4] Data presented in this article are from 1990 Forms 990 and 990EZ. Organizations used the 1990 forms when their accounting periods ended during the time period, December 31, 1990, through November 30, 1991. The total number of nonprofit charitable organizations, including those not required to file Form 990 or Form 990EZ, was obtained from Internal Revenue Service, Employee Plans and Exempt Organizations, Office of Systems Development and Administration, as reported in *Monthly Exempt Organizations Statistical Summary*, and does not include private foundations filing Form 990-PF, *Return of Private Foundation*.

¹Excludes private foundations and most religious organizations.

NOTE: Detail may not add to totals because of rounding and processing tolerances.

by Cecelia Hilgert

he total revenue of charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3), excluding private foundations and most religious organizations, increased by 13 percent over the previous year to \$491.1 billion for 1991. Program service activities provided 70 percent of total revenue (\$344.4 billion), while contributions, gifts, and grants provided less than one-fifth of the total (\$87.5 billion). Total expenses rose by 12 percent to \$458.7 billion for 1991 (Figure A).

In addition, statistics are presented in this article for organizations that are tax-exempt under Code sections 501(c)(4) through (9). They are diverse in both their function and financial characteristics. Civic leagues and social welfare organizations, section 501(c)(4), and voluntary employee benefit associations, section 501(c)(9), reported assets greater than \$37 billion for 1991. This latter group reported the greatest amount of revenue among organizations categorized by these six Code sections for 1991, \$56.2 billion. The statistics for charities and other tax-exempt organizations shown in this article are based on data from Form 990, *Return of Organization Exempt from Income Tax*, and Form 990EZ, *Short Form Return of Organization Exempt from Income Tax*[1].

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

While the Internal Revenue Code classifies tax-exempt nonprofit organizations into 31 groups, some of which are eligible to receive tax-deductible donations under Code section 170, those organizations that are exempt under section 501(c)(3) receive the largest part of the tax-deductible donations. These organizations have purposes that are religious, charitable, scientific, literary, or educational, or they foster national or international amateur sports competition, or they prevent cruelty to children or animals, or they test for public safety. Their activities are restricted in that they must further one or more of these exempt purposes.

Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, these organizations may not distribute net earnings to any

private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign on behalf of, or in opposition to, any candidate for political office.

Of the 439,974 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 149,544 returns filed for 1991 [2]. Those not required to file included religious organizations and organizations with annual gross receipts of less than \$25,000. The number of returns filed showed a 5-percent increase from 1990. The Form 990EZ return represented 21 percent of the total number of returns filed; it was used by organizations with gross receipts of less than \$100,000 and assets of less than \$250,000. (Where possible, Form 990 data and Form 990EZ data are combined in this article.)

Financial Characteristics of Nonprofit Charitable Organizations

Assets of nonprofit charitable organizations registered a 12-percent increase from 1990, rising to \$777.5 billion for 1991. Organizations with assets of \$50 million or more accounted for less than 2 percent of the section 501(c)(3) returns filed, but they represented over 70 percent of the total asset holdings (Figure B). Investments in securities continued to be the major asset holding, with a total of \$252.9 billion, up from \$222.2 billion. This asset category represented one-third of the total. Land, buildings, and equipment totaled \$216.6 billion, accounting for 28 percent of total assets. (Detailed financial data are provided in Table 1 for the nonprofit charitable organizations that filed

¹ Includes returns with zero assets or assets not reported.

Form 990 and in Table 4 for Form 990EZ filers.)

The type of asset holdings varied among the asset-size classes of the organizations. For small organizations -those with assets of less than \$500,000 -- total assets rose by 16 percent. Cash and savings (short-term account balances) represented nearly one-half of their total assets (\$5.5 billion). For the organizations with assets of between \$500,000 and \$1 million, land, buildings, and equipment were the largest single asset type, 35 percent of the total, with cash and savings (short-term account balances) representing an additional 21 percent. Land, buildings, and equipment accounted for the largest type of holding for organizations with assets of between \$1 million and \$50 million. In contrast, investments in securities were the largest asset holding for organizations with assets of \$50 million or more, representing 37 percent (\$207.7 billion) of their total assets; this type of asset rose by 26 percent for this size-class for 1991.

Total liabilities of all nonprofit charitable organizations also increased, by 14 percent for 1991, to \$365.6 billion. The balance sheet of a tax-exempt organization does not have an owner's equity section; instead, unexpended earnings accrue to a "net worth or fund balance" account. The total fund balance for nonprofit charitable organizations was \$411.9 billion, up from \$375.3 billion for 1990 (10 percent).

In terms of revenue, program service revenue -- the fees collected by organizations for the programs operated in support of their tax-exempt purposes -- was the major source. Overall, it continued to account for 70 percent of total revenue for 1991. Some examples of program service revenue include tuition and fees at educational institutions, hospital patient care charges (including Medicare and Medicaid payments), admission fees collected by

museums or community performing arts groups, YMCA/YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. For 1991, program service revenue totaled \$344.4 billion. As the size of organizations increased, program service revenue as a percentage of total revenue also increased (Figure C). The largest asset-size organizations, those with assets of \$50 million or more, relied on program service revenue for 76 percent of their total.

Contributions, gifts, and grants received were \$87.5 billion, or 18 percent of the total received. Figure D presents information on contributions received by nonprofit charitable organizations that filed the long Form 990. Total contributions to these organizations increased by just 3 percent to \$86.8 billion. The total was comprised of \$40.3 billion received in direct public support, \$38.8 billion from Government grants, and \$7.7 billion from indirect public support. This last category includes revenue received from solicitation campaigns conducted by federated fundraising agencies; it showed a 4-percent decline from 1990. Contributions, gifts, and grants as a percentage of total revenue varied depending on the size of the organization. Organizations with assets of \$10 million or more relied on this source for just 12 percent of their total revenue, while small organizations with assets of less than \$1 million depended on contributions, gifts, and grants for one-half of their revenue. Figures E and F show revenue and asset data for the ten largest section 501(c)(3) organizations [3].

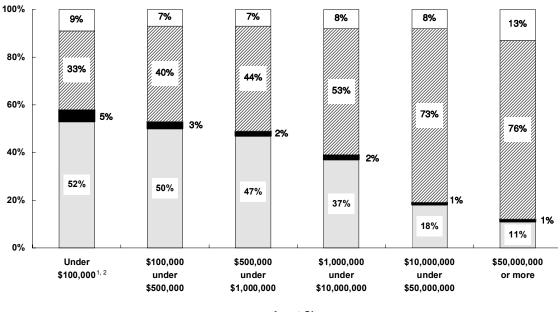

Nonprofit charitable organizations reported their detailed expenses on Form 990 by "functional categories" (salaries and wages, pension plan contributions and other employee benefits, legal fees, supplies, and the like), which were then combined into broad categories on Form 990:

² Estimates should be used with caution because of the small number of sample returns on which they are based.

NOTES: Data are for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

program services, management and general, and fundraising (Table 3). Total expenses reported for 1991 were \$457.4 billion. For all organizations, those expenses relating to specific program services accounted for 86 percent of the total (\$394.8 billion), with salaries and wages the largest single component. Management and general expenses, which supported the overall organization rather than specific programs, amounted to \$57.5 billion. Fundraising activities were \$4.0 billion, and payments to affiliates accounted for an additional \$1.1 billion. (These are payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies.)

NOTE: Data are for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations and most religious organizations

Figure G presents information on the types of nonprofit charitable organizations exempt under section 501(c)(3) that filed Form 990 or Form 990EZ (short form) for 1991 [4]. The information was based on responses to a question on the return forms identifying the reason why the organization was not classified as a private foundation. In contrast to a nonprofit charitable organization, a private foundation is narrowly supported and controlled, usually by an individual, family, or corporation, as opposed to an organization receiving broad support from a large number of sources within the general public [5].

Hospitals were the leading category of nonprofit charitable organizations in terms of assets and revenue. Their assets totaled \$232.0 billion and their revenue, \$224.9 billion, which represented increases of 11 percent for both from 1990. Hospitals accounted for 46 percent of total revenue and 30 percent of total assets of all 501(c)(3) organizations filing returns.

Publicly-supported organizations were the second leading category in terms of revenue, with \$131.5 billion nearly one-half of which was derived from their program service activities. The assets of these organizations were \$174.7 billion. These are organizations which normally receive a substantial part of support from a Governmental unit or from the general public in the form of contributions or revenue from their exempt function services and products (program service revenue). This type of organization includes the American Red Cross or United Way and their affiliated agencies, voluntary health agencies, community foundations, cultural organizations, and a wide variety of community-service organizations. These organizations received more than three-fifths of all contributions, gifts, and grants received by 501(c)(3) organizations filing returns.

Educational institutions were third in terms of revenue (\$79.4 billion), and fourth in terms of total assets (\$162.7 billion). They received over one-fifth of the total of these contributions, gifts, and grants, second only to the amounts received by publicly-supported organizations.

Organizations of a fourth type -- those that support other charitable organizations -- had \$179.6 billion in assets and \$42.9 billion in revenue for 1991. Examples of this type of organization include the College Retirement Equities Fund, Teachers Insurance and Annuity Association of America, and Common Fund for Nonprofit Organ-izations.

Nonprofit Charitable Organizations Filing Form 990EZ

A total of 30,739 Form 990EZ returns were filed for 1991 by nonprofit charitable organizations that had assets of less than \$250,000 and gross receipts of less than \$100,000 (Figure H). Most of these filers (86 percent) reported

ported by these filers. Of the asset total of \$1.4 billion, two-thirds was in cash, savings, and investments. Publicly-supported organizations comprised 80 percent of Form 990EZ filers. (Table 4 presents detailed data on Form 990EZ filers.)

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) through (9)

The statistics presented in this section are based on the Forms 990 and 990EZ filed by organizations tax-exempt under Internal Revenue Code sections 501(c)(4) through (9). Figure I provides general descriptions of the organizations included under these sections. Unlike the nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3), most of these organizations are not eligible for tax-deductible contributions. Financial data for organizations covered by these six Code sections are presented in Tables 2, 3, and 4.

Selected data for these organizations are compared for 1991 with 1990 in Figure J. Four of the six Code sections showed increases in the number of returns filed for 1991, while labor, agricultural, and horticultural organizations, section 501(c)(5), and fraternal beneficiary societies and associations, section 501(c)(8), had decreases. Each of the six Code section categories showed increases in the level of assets and liabilities between the two years, with voluntary employees' benefit associations, section 501(c)(9), registering the largest increases of 13 percent and 14

NOTES: Data are for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations and most religious organizations (see footnote 1). Detail may not add to totals because of rounding and processing tolerances.

² Estimates should be used with caution because of the small number of sample returns on which they are based.

percent in assets and liabilities, respectively. In each Code section, with the exception of voluntary employees' beneficiary associations, about 80 percent of the returns filed represented organizations with assets of less than \$500,000, which was a greater proportion of returns than the corresponding 68-percent of the nonprofit charitable organizations under section 501(c)(3) (Figure K).

In terms of revenue, voluntary employees' beneficiary

associations reported considerably more revenue for 1991 than that reported by any of those filing under the other five Code sections (Figure L). The \$56.2 billion reported was an increase of 2 percent from 1990. Most of the revenue (85 percent) was in the form of program service revenue, which represented payments for health and welfare benefits coverage.

NOTE: Detail may not add to totals because of rounding and processing tolerances.

NOTE: Detail may not add to totals because of rounding and processing tolerances.

501(c)(4), ranked second in total revenue (\$21.4 billion), an increase of 19 percent from 1990. Three-fifths of this was derived from program service activities. Business leagues, chambers of commerce, and real estate boards, section 501(c)(6), were third in terms of total revenue, with membership dues and assessments (\$8.2 billion) and program service revenue (\$8.1 billion) as the principal components. Membership dues and assessments were the principal source of revenue also for labor, agricultural, and horticultural organizations, section 501(c)(5) -- \$7.8 billion; and social and recreational clubs, section 501(c)(7) -- \$3.7 billion. For these three types, the organizations with assets of less than \$10 million accounted for more than one-half of the total revenue (Figure M).

Civic leagues and social welfare organizations and voluntary employees' beneficiary associations both reported asset holdings greater than \$37 billion for 1991, representing increases of 7 percent and 13 percent, respectively, over their 1990 levels. For both of these types of organizations, the large organizations with assets of greater than \$10 million accounted for three-quarters of the total (Figure N). The other four Code sections also registered increases in asset totals.

The major assets held by the six types of organizations

are shown in Figure O. (Detailed data on the components of assets are limited to those organizations that filed the longer Form 990; the shorter Form 990EZ contains a condensed balance sheet without the detail.) Investments in securities were the largest single component of assets reported by labor, agricultural, and horticultural organizations; business leagues, chambers of commerce, and real estate boards; fraternal beneficiary associations; and voluntary employees' beneficiary associations. For social and recreational clubs, the largest component of assets was land, buildings, and equipment. For civic leagues and social welfare organizations, receivables (included in other assets in Figure O) represented the largest single component of assets.

Sections 501(c)(4)-(9) Organizations Filing Form 990EZ

Form 990EZ may be filed by organizations that are exempt under Internal Revenue Code section 501(c) with annual gross receipts of less than \$100,000 and assets under \$250,000. The use of this short form by organizations in Code sections 501(c)(4) through (8) was higher than by the nonprofit charitable organizations under section 501(c)(3)

501(c)(9)	9,865	786	8.0

Code section. For these filers, cash, savings, and investments were the largest component of assets reported by organizations reporting under five of the six Code sections. The exception was social and recreational clubs which reported land and buildings as the largest category of assets (50 percent). Membership dues and assessments were the principal source of revenue for five types of organizations, with that one source representing at least one-third of total revenue. The exception was the voluntary employees' beneficiary associations for which program service revenue was the primary source of revenue.

Summary

For 1991, nonprofit charitable organizations tax-exempt under section 501(c)(3) reported revenue and assets of \$491.1 billion and \$777.5 billion, respectively [6]. These totals represented increases of 13 percent over 1990. The number of returns filed by these organizations was 149,544, which included both the longer Form 990 and the shorter Form 990EZ. This latter form accounted for one-fifth of the total number of returns filed.

Program service revenue, the fees received for the programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3) were granted, was \$344.4 billion. It represented 70 percent of total revenue. Contributions, gifts, and grants increased by 3 percent to \$87.5 billion. This source of revenue accounted for more than one-half of the revenue for organizations with asset holdings of less than \$1 million but for a much smaller share for larger organizations. Expenses rose by 12

percent to \$458.7 billion; of that amount, 86 percent was in support of the organizations' programs.

Organizations exempt under Internal Revenue Code sections 501(c)(4) through (9) are diverse in both their purposes and financial characteristics. Three types of organizations -- civic leagues and social welfare organizations, section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and business leagues, chambers of commerce, and real estate boards, section 501(c)(6) -- each filed more than 20,000 Forms 990 and 990EZ. In terms of assets, civic leagues and social welfare organizations and voluntary employees' beneficiary associations (section 501(c)(9)) reported assets greater than \$37 billion for 1991. All six of these types of organizations reported increases in both asset and revenue totals. Membership dues and assessments were the principal source of revenue for organizations in five of the six organizational types; program service revenue was the principal source for voluntary employees' beneficiary associations in the form of payments for health and welfare benefits.

Data Sources and Limitations

The statistics in this article are based on a sample of the 1991 Forms 990, Return of Organization Exempt from *Income Tax*, and Forms 990EZ, *Short Form Return of* Organization Exempt from Income Tax. Organizations used the 1991 Form 990 when their accounting periods ended during the time period December 31, 1991, through November 30, 1992. These returns comprise the data for Reporting Year 1991 shown in this article. The sample did not include private foundations, which were required to file on a separate return form. Most churches and other religious organizations were also excluded from the sample because they were not required to file a Form 990 or a Form 990EZ. However, as shown in Figure G, some of these organizations filed returns voluntarily. The sample included only those returns with receipts of more than \$25,000, the filing threshold. The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations exempt under other sections were not included in the study. The data presented were obtained from returns as originally filed. In most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into sample strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a

sample of 10,811 returns was selected from a population of 152,119. All returns with assets of \$10 million or more were included. Sampling rates ranged from 0.8 percent for small asset classes to 100 percent for organizations with assets of \$10 million or more. For organizations filing under sections 501(c)(4) through (9), a sample of 9,438 returns was selected from a population of 101,211. Sampling rates ranged from 1.5 percent for the small asset classes to 100 percent for organizations with assets of \$2,500,000 or more. The populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed prior to 1991. These returns were not included in the samples, nor in the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV) should be taken into account. Figure Q shows CV's for selected financial data. A discussion of the methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

- [2] Data presented in this article are from 1991 Forms 990

- and 990EZ. Organizations used the 1991 Form 990 when their accounting periods ended during the time period of December 31, 1991, through November 30, 1992. The total number of nonprofit charitable organizations, including those not required to file Form 990 or Form 990EZ, was obtained from the Internal Revenue Service Exempt Organizations Business Master File, as reported in *Monthly Exempt Organizations Statistical Summary*, and does not include private foundations filing Form 990-PF, *Return of Private Foundation*.
- [3] Public disclosure of exempt organization data is allowed under Internal Revenue Code section 6104(b).
- [4] Some data in this section are from unpublished Statistics of Income tabulations.
- [5] For information on private foundations, see "Private Foundations and Charitable Trusts, 1991," Statistics of Income Bulletin, Winter 1994-1995, Volume 14, Number 3; and Meckstroth, Alicia, "Private Foundations and Charitable Trusts, 1990," Statistics of Income Bulletin, Winter 1993-1994, Volume 13, Number 3.
- [6] For information on the unrelated business income tax returns of tax-exempt organizations, see Riley, Margaret, "Unrelated Business Income Tax Returns, 1991," *Statistics of Income Bulletin*, Spring 1995, Volume 14, Number 4; and Harte, James M., and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," *Statistics of Income: Turning Administrative Systems Into Information Systems-1993*.

¹ Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

² Includes organizations with end-of-year total assets less than \$250,000 and gross receipts less than \$100,000 not filing a Form 990EZ.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Table 2.--Form 990 Returns of Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(3)-(9): Selected Income Statement and Balance Sheet Items, by Code Section

Data Release

he Internal Revenue Code classifies tax-exempt, nonprofit organizations into 31 groups, some of which are eligible to receive tax-deductible donations under Code section 170. Those organizations that are exempt under section 501(c)(3) receive the largest part of the tax-deductible donations. This data release discusses them and also the organizations that are exempt under sections 501(c)(4) through (9). The statistics are based on data from Form 990, Return of Organization Exempt from Income Tax, and Form 990EZ, Short Form Return of Organization Exempt from Income Tax [1].

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational, or they foster national or international amateur sports competition, or they prevent cruelty to children or animals, or they test for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing authorities, historical societies, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, exempt organizations may not distribute net earnings to a private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign in behalf of, or in opposition to, any candidate for public office.

Of the 466,961 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 157,941 returns filed for 1992 [2]. Those not required to file included religious organizations and organizations with annual gross receipts of less than \$25,000. The number of returns filed showed a 6-percent increase from 1991 (Figure A). The number of Form 990EZ returns increased to 22 percent of total returns filed. This shortened return form is for organizations with gross receipts of less than \$100,000 and assets of less than \$250,000. (Where possible, Form 990 data and Form 990EZ

This data release was written by Cecelia Hilgert, an economist with the Special Studies Special Projects Section, under the direction of Michael Alexander, Chief.

Total expenses	458,739	490,245
Excess of revenue over expenses	32,367	33,548

NOTES: Data are from both Forms 990 and 990EZ for nonprofit charitable organizations that are tax-exempt under IRC section 501(c)(3) and exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Total revenue of organizations exempt under Code section 501(c)(3), excluding private foundations, was \$523.8 billion for 1992, an increase of 7 percent from 1991. Program service revenue—the fees collected by organizations for the programs operated in support of their taxexempt purposes—was the major source. It totaled \$374.8 billion for 1992, which represented 72 percent of total revenue. For 1992, revenues exceeded expenses by \$33.5 billion, an increase of 4 percent. Total assets grew to \$849.3 billion, an increase of 9 percent from 1991. Investments in securities were the major asset holding, \$285.0 billion, which accounted for one-third of the total. (See Table 1 for selected balance sheet and income statement items for Form 990 filers, including expense totals for three functions: program services, management and general, and fundraising. Table 2 provides detailed expenditures by object classification for Form 990 filers. Tables 3 and 4 show selected items for Form 990 and Form 990EZ filers, respectively.)

Figure B presents information on the types of nonprofit charitable organizations that filed Forms 990 or 990EZ for 1992. The information was based on responses to a question on the return forms identifying the reason why the organization was not classified as a private foundation. In contrast to a nonprofit charitable organization, a private foundation is narrowly supported and controlled, usually

Type not reported	374	204	170	553	453	31	532	21

¹ Churches and other religious-affiliated organizations are not required to file a Form 990 or Form 990EZ. Most of the organizations filed voluntarily or misreported their type of organization. The estimate is, therefore, not inclusive of the majority of religious organizations.

NOTES: Data are from both Forms 990 and 990EZ for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations and most religious organizations (see footnote 1). Detail may not add to totals because of rounding and processing tolerances.

by an individual, family, or corporation, as compared to a nonprofit charitable organization which receives broad support from a large number of sources within the general public. It is this narrow base of support and control which differentiates a private foundation from a nonprofit charitable organization. Because of their centralized support and control, private foundations are more strictly regulated than the other section 501(c)(3) organizations. Their contributors are subject to limitations on individual income tax deductions, and nonoperating foundations have requirements on mandatory distributions and an excise tax on net investment income [3].

As shown in Figure B, hospitals were the leading category of nonprofit charitable organization in terms of assets and revenue, representing 30 percent of the total amount of assets and 46 percent of the revenue total. Publicly-supported organizations were the second leading category in terms of revenue with 28 percent of the total. Examples of publicly-supported organizations are the American Red Cross or United Way and their affiliated agencies, voluntary health agencies, community foundations, cultural organizations, and a wide variety of commu-

nity-service organizations. Program service revenue was the leading revenue source for both hospitals and publicly-supported organizations.

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) Through (9)

Organizations that are tax-exempt under Code sections 501(c)(4) through (9) are quite diverse in their program activities, as well as in their organizational structures. Unlike the nonprofit charitable organizations that are tax-exempt under section 501(c)(3), most of them are not eligible to receive tax-deductible contributions.

Figure C presents selected data for these organizations for 1991 and 1992. Three types of organizations exempt under these Code sections—civic leagues and social welfare organizations, section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and business leagues, chambers of commerce, and real estate boards, section 501(c)(6)—each filed over 21,000 Forms 990 and 990EZ for 1992. In general, the relative use of the

NOTES: Data are from both Forms 990 and 990EZ.

Form 990EZ was greater by organizations in these Code sections than that of the nonprofit charitable organizations exempt under Code section 501(c)(3). For example, the Form 990EZ represented 36 percent of the returns filed by civic leagues and social welfare organizations; 34 percent of the returns filed by labor, agricultural, and horticultural organizations; and 29 percent of the returns filed by business leagues, chambers of commerce, and real estate boards, as compared to 22 percent of the returns filed by the nonprofit organizations exempt under 501(c)(3). Tables 2 and 3 show data for Form 990 filers, while Table 4 presents information on Form 990EZ filers.

Voluntary employees' beneficiary associations, Code section 501(c)(9), led the other five types of organizations in terms of assets (\$41.8 billion). Civic leagues and social welfare organizations, Code section 501(c)(4), were second with \$38.7 billion, followed closely by fraternal beneficiary societies and associations, Code section 501(c)(8), with \$36.9 billion. The largest of these organizations—those with assets of \$10 million or more—represented more than three-quarters of the assets of the organizations exempt under these three Code sections [4].

In terms of revenue, voluntary employees' beneficiary associations, section 501(c)(9), reported the largest amount for 1992, \$65.5 billion. The composition of revenue varied considerably for the organizations in these six Code sections. Membership dues and assessments were the major source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); business leagues, chambers of commerce, and real estate boards, section 501(c)(6); and social and recreation clubs, section 501(c)(7). Program service revenue was the major source of revenue for the organizations exempt under the other three Code sections. While program service revenue is

generally composed of fees for services on which the tax exemption is based, including hospital and tuition charges in the case of nonprofit charitable organizations (501(c)(3)), for fraternal beneficiary associations (501(c)(8)) and voluntary beneficiary associations (501(c)(9)), the program service revenue was, instead, composed of payments received for health and welfare benefits coverage.

Data Sources and Limitations

The statistics in this data release are based on a sample of the 1992 Forms 990, Return of Organization Exempt from Income Tax, and Forms 990EZ, Short Form Return of Organization Exempt from Income Tax. Organizations used the 1992 forms when their accounting periods ended during the time period December 31, 1992, through November 30, 1993. These returns comprise the data for Reporting Year 1992 shown in this data release. The sample did not include private foundations, which were required to file on a separate return form. Most churches and other religious organizations were also excluded from the sample because they were not required to file a Form 990 or a Form 990EZ. However, as shown in Figure B, some of these organizations filed returns voluntarily. The sample included only those returns with receipts of more than \$25,000, the filing threshold.

The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations exempt under other sections were not included in the study. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical

reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into sample strata based on size of total assets, with each stratum sampled at different rate. For section 501(c)(3) organizations, a sample of 11,461 returns was selected from a population of 160,629. Sampling rates ranged from 0.9 percent for small asset classes to 100 percent for organizations with assets of \$10,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 9,800 returns was selected from a population of 102,777. Sampling rates ranged from 1.5 percent for the small asset classes to 100 percent for organizations with assets of \$2,500,000 or more. The populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed prior to 1992. These returns were not included in the samples, nor in the estimated population counts.

¹Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

²Includes organizations with end-of-year total assets less than \$250,000 and gross receipts less than \$100,000 electing to file Forms 990 rather than Forms 990EZ.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Data Release

he Internal Revenue Code classifies tax-exempt, nonprofit organizations into 31 groups, some of which are eligible to receive tax-deductible donations under Code section 170. Those organizations that are exempt under section 501(c)(3) receive the largest part of the tax-deductible donations. This data release discusses these organizations and also organizations that are exempt under sections 501(c)(4) through (9). The statistics are based on data from Form 990, Return of Organization Exempt from Income Tax, and Form 990-EZ, Short Form Return of Organization Exempt from Income Tax

[1]. For the first time, these organizations reported on their tax-exempt bond liabilities.

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational, or they foster national or international amateur sports competition, or they prevent cruelty to children or animals, or they test for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing authorities, historical societies, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, exempt organizations may not distribute net earnings to a private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign on behalf of, or in opposition to, any candidate for public office.

Of the 489,890 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 165,599 returns filed for accounting periods that began in 1993 [2]. Those not required to file included religious organizations and organizations with annual gross receipts of less than \$25,000. The number of returns filed showed a 5-percent increase from 1992 (Figure A). The number of Form 990-EZ returns represented 22 percent of total returns filed. This shortened return form is for organizations with gross receipts of less than \$100,000 and assets of less than

This data release was written by Cecelia Hilgert, an economist with the Special Projects Section, Special Studies and Publications Branch under the direction of Michael Alexander, Chief.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under IRC section 501(c)(3) and exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

\$250,000. (Where possible, Form 990 data and Form 990-EZ are combined in this data release.)

Total revenue of organizations exempt under Code section 501(c)(3), excluding private foundations, was \$566.1 billion for 1993, an increase of 8 percent from 1992. Program service revenue--the fees collected by organizations for the programs operated in support of their tax-exempt purposes--was the major source. It totaled \$402.8 billion for 1993, which represented 71 percent of total revenue. For 1993, revenues exceeded expenses by \$35.9 billion, an increase of 7 percent from 1992. Total assets grew to \$926.8 billion, an increase of 9 percent from 1992. Investments in securities were the major asset holding, \$320.7 billion, which accounted for one-third of the total; this type of asset showed a 13-percent rise from 1992. (See Table 1 for selected balance sheet and income statement items for Form 990 filers. Table 2 provides detailed expenditures by functional category for Form 990 filers. Tables 3 and 4 show selected items for Form 990 and Form 990-EZ filers, respectively.)

Figure B presents information on the types of nonprofit charitable organizations that filed Forms 990 or 990-EZ for 1993. The information was based on responses to a question on the return forms identifying the reason why the organization was not classified as a private foundation. In contrast to a nonprofit charitable organization, a private foundation is narrowly supported and controlled, usually by an individual, family, or corporation, and does not solicit funds from the general public. It is this narrow

¹ Churches and other religious-affiliated organizations are not required to file a Form 990 or Form 990-EZ. Most of the organizations filed voluntarily or misreported their type of organization. The estimate is, therefore, not inclusive of the majority of religious organizations.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations and most religious organizations (see footnote 1). Detail may not add to totals because of rounding and processing tolerances.

base of support and control which differentiates a private foundation from a nonprofit charitable organization. Because of their centralized support and control, private foundations are more strictly regulated than the other section 501(c)(3) organizations. Their contributors are subject to special limitations on individual income tax deductions, and nonoperating foundations, which are the most prevalent type, have mandatory distribution requirements and an excise tax on net investment income [3].

As shown in Figure B, hospitals were the leading category of nonprofit charitable organization in terms of assets and revenue, representing 29 percent of the total amount of assets and 45 percent of the revenue total. Publicly-supported organizations were the second leading category in terms of revenue with 28 percent of the total. These organizations receive broad financial support from a large number of sources within the general public [4]. Examples are the American Red Cross and the United Way and their affiliated agencies, voluntary health agencies, community foundations, cultural organizations, and a wide variety of community-service organizations. These organizations showed increases of 10 percent in assets, 11 percent in revenue, and 14 percent in program service revenue. Program service revenue was the leading revenue source for both hospitals and publicly-supported organizations.

Nonprofit charitable organizations reported tax-exempt bond liabilities of \$70.4 billion. Most of this amount (\$61.9 billion) was reported by organizations with assets greater than \$50 million.

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) Through (9)

Organizations that are tax-exempt under Code sections 501(c)(4) through (9) are quite diverse in their program activities, as well as in their organizational structures. Unlike the nonprofit charitable organizations that are tax-exempt under section 501(c)(3), most of them are not eligible to receive tax-deductible contributions.

Figure C presents selected data for these organizations for 1992 and 1993. Three types of organizations exempt under these Code sections--civic leagues and social welfare organizations, section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and business leagues, chambers of commerce, and real estate boards, section 501(c)(6)--each filed over 21,000 Forms 990 and 990-EZ for 1993. The number of returns filed by organizations in these Code subsections remained rather stable from the number filed for 1992. In general, the relative use of the Form 990-EZ was greater by organizations in these Code sections than that of the nonprofit charitable organizations exempt under Code section

² Less than \$500,000.

NOTES: Data are from both Forms 990 and 990-EZ

501(c)(3). For example, the Form 990-EZ represented 36 percent of the returns filed by civic leagues and social welfare organizations; 35 percent of the returns filed by labor, agricultural, and horticultural organizations; and 25 percent of the returns filed by business leagues, chambers of commerce, and real estate boards, as compared to 22 percent of the returns filed by the nonprofit charitable organizations discussed earlier. Tables 2 and 3 show data for Form 990 filers, while Table 4 presents information on Form 990-EZ filers.

Voluntary employees' beneficiary associations, Code section 501(c)(9), led the other five types of organizations in terms of assets, \$48.2 billion; this represented an increase of 15 percent from 1992. Civic leagues and social welfare organizations, Code section 501(c)(4), were second with \$41.8 billion, followed by fraternal beneficiary societies and associations, Code section 501(c)(8), with \$40.6 billion. The largest of these organizations--those with assets of \$10 million or more--represented more than three-quarters of the assets of the organizations exempt under these three Code sections [5].

In terms of revenue, voluntary employees' beneficiary associations, section 501(c)(9), reported the largest amount for 1993, \$67.0 billion. The composition of revenue varied considerably for the organizations in these six Code sections. Membership dues and assessments were the major source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); business leagues, chambers of commerce, and real estate boards, section 501(c)(6); and social and recreation clubs, section 501(c)(7). Program service revenue was the major source of revenue for the organizations exempt under the other three Code sections. While program service revenue is generally composed of fees for ser-

vices on which the tax exemption is based, for fraternal beneficiary associations (501(c)(8)) and voluntary beneficiary associations (501(c)(9)), the program service revenue was, instead, composed of payments received for health and welfare benefits coverage.

Data Sources and Limitations

The statistics in this data release are based on a sample of the 1993 Forms 990, Return of Organization Exempt from Income Tax, and Forms 990-EZ, Short Form Return of Organization Exempt from Income Tax. Organizations used the 1993 forms when their accounting periods ended during the time period December 31, 1993, through November 30, 1994. These returns comprise the data for Reporting Year 1993 shown in this data release. The sample did not include private foundations, which were required to file on a separate return form. Most churches and other religious organizations were also excluded from the sample because they were not required to file a Form 990 or a Form 990-EZ. However, as shown in Figure B, some of these organizations filed returns voluntarily. The sample included only those returns with receipts of more than \$25,000, the filing threshold.

The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations exempt under other sections were not included in the study. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administra-

tive processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into sample strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 11,882 returns was selected from a population of 167,765. Sampling rates ranged from 0.7 percent for small asset classes to 100 percent for organizations with assets of \$10,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 8,146 returns was selected from a population of 102,841. Sampling rates ranged from 1.9 percent for the small asset classes to 100 percent for organizations with assets of \$10,000,000 or more. The populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed prior to 1993. These returns were not included in the samples, nor in the estimated population counts.

Notes and References

- [1] Data for previous years were published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. See also "Charities and Other Tax-Exempt Organizations, 1992," Statistics of Income Bulletin, Summer 1996, Volume 16, Number 1, and Riley, Margaret, "Exempt Organization Business Income Tax Returns: Highlights and An Analysis of Exempt and Nonexempt Finances, 1993," in this issue.
- [2] Data presented in this data release are from 1993 Forms 990 and 990-EZ. The total number of non-

- profit charitable organizations, including those not required to file Form 990 or Form 990-EZ, was obtained from the Internal Revenue Service Exempt Organizations Business Master File, as reported in *Monthly Exempt Organizations Statistical Summary*, and does not include private foundations filing Form 990-PF, *Return of Private Foundation*. A file containing Business Master File records of exempt organizations is available on the Statistics of Income's electronic bulletin board, which can be accessed at (202) 874-9574.

Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

²Includes organizations with end-of-year total assets less than \$250,000 and gross receipts less than \$100,000 electing to file Forms 990 rather than Forms 990-EZ.

³Comparable to "net income (loss), fundraising" in prior-year tables.

NOTES: Nonprofit charitable organizations exclude private foundations and most religious organizations. Detail may not add to totals because of rounding and processing tolerances.

by Cecelia Hilgert

he revenue and assets of nonprofit charitable organizations exempt under Internal Revenue Code section 501(c)(3), excluding private foundations and most religious organizations, increased by 4 percent and 7 percent, respectively, over the comparable totals for 1993. Total revenue rose to \$589.1 billion, of which the organizations' program service activities provided more than 70 percent (\$422.4 billion). Total assets grew to \$993.4 billion. There were nearly 175,000 returns filed, representing a 6-percent increase from the prior year (Figure A).

In addition, statistics are presented in this article for organizations that are tax-exempt under Code sections 501(c)(4) through (9). They are diverse in both their functions and financial characteristics. Voluntary employee benefit associations, exempt under section 501(c)(9), reported assets of \$56.0 billion and revenue of \$71.2 billion, which were larger than amounts registered by organizations classified by the other Code sections.

The statistics for charities and other tax-exempt organizations shown in the article are based on data from Form 990, *Return of Organization Exempt From Income Tax*, and Form 990-EZ, the short form of this information return. This latter form is for smaller organizations, those with gross receipts of less than \$100,000 and end-of-year assets of less than \$250,000 [1].

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501 (c)(3)

Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational, or they foster national or international amateur sports competition, or they prevent cruelty to children or animals, or they test for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing authorities, historical societies, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status. Under the Code, exempt organizations may not distribute net earnings to a private share-holder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

political campaign on behalf of, or in opposition to, any candidate for public office.

Of the 579,384 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 174,918 returns filed for accounting periods that began in 1994 [2]. Those not required to file included churches and certain other religious organizations and also organizations with annual gross receipts of less than \$25,000. The number of returns filed showed a 6-percent increase from 1993 (Figure A). The number of Form 990-EZ returns represented 22 percent of total returns filed. (Where possible, Form 990 data and Form 990-EZ data are combined in this article.)

Financial Characteristics of Nonprofit Charitable Organizations

Two-thirds of the returns filed for 1994 were by organizations with assets of less than \$500,000, yet they represented just over 1 percent of the total assets reported and 4 percent of the total revenue (Figure B). By contrast, organizations with assets of \$10 million or more accounted for 5 percent of the section 501(c)(3) returns filed and represented 87 percent of the total asset holdings and 79 percent of total revenue.

The total assets of nonprofit charitable organizations registered a 7-percent increase from 1993, rising to \$993.4 billion. Investments in securities continued to be the major asset holding, with a total of \$348.9 billion, as reported by

¹ Includes returns with zero assets or assets not reported.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501 (c)(3) and exclude private foundations, most churches, and certain other religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Form 990 filers. This asset category represented more than one-third of the total. Land, buildings, and equipment, reported on both the long and short versions of the return, totaled \$274.9 billion, accounting for 28 percent of the total. (Detailed financial data are provided in Table 1 for the nonprofit charitable organizations that filed Form 990 and in Table 4 for Form 990-EZ filers.)

The types of asset holdings varied among the assetsize classes of the organizations. For small organizations-those with assets of less than \$500,000--total assets rose by 7 percent. Cash and savings (short-term account balances) represented nearly one-half of their total assets (\$6.6 billion). For organizations with assets of between \$500,000 and \$1 million, land, buildings, and equipment accounted for the largest type of holding, 39 percent of the total, with cash and savings (short-term account balances) an additional 26 percent. Land, buildings, and equipment accounted for the largest type of holding also for the organizations with assets of between \$1 million and \$50 million. In contrast, investments in securities were the largest asset holding for organizations with assets of \$50 million or more, representing 40 percent (\$294.1 billion) of their total assets; this type of asset rose by 9 percent for this size-class for 1994.

Total liabilities of nonprofit charitable organizations also increased, by 6 percent for 1994, to \$464.0 billion. The balance sheet of a tax-exempt organization does not have an owner's equity section; instead, unexpended earnings accrue to a "net worth or fund balance" account. The total fund balance for nonprofit charitable organizations was

\$529.3 billion, up from \$488.4 billion for 1993 (an 8-percent increase).

In terms of revenue, program service revenue--the fees collected by organizations for the programs operated in support of their tax-exempt purposes--was the major source. Overall, it continued to account for more than 70 percent of total revenue for 1994. Some examples of program service revenue include tuition and fees at educational institutions, hospital patient care charges (including Medicare and Medicaid payments), admission fees collected by museums or community performance arts groups, YMCA/YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. For 1994, program service revenue totaled \$422.4 billion. As the size of organizations increased, program service revenue as a percentage of total revenue also increased (Figure C). The largest asset-size organizations, those with assets of \$50 million or more, relied on program service revenue for 79 percent of their total revenue.

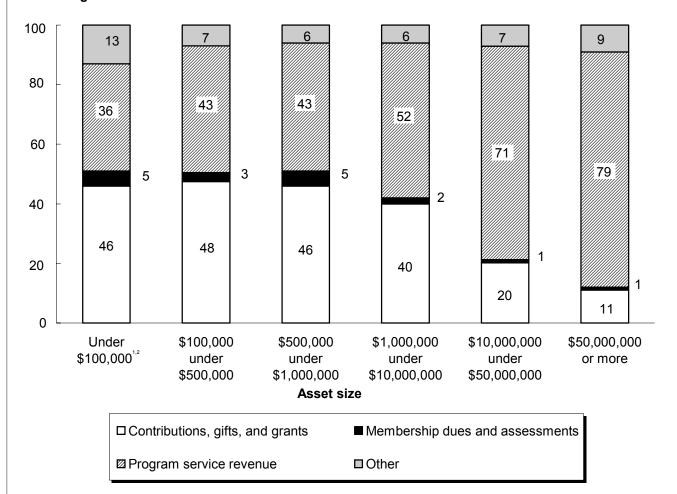

Contributions, gifts, and grants received were \$110.7 billion, or 19 percent of total revenue received, rising by 7 percent from 1993. Figure D presents information on contributions received by nonprofit charitable organizations that filed the long Form 990. The total was comprised of \$52.0 billion in Government grants, \$49.2 billion in direct public support, and \$8.7 billion in indirect support. (This last category includes contributions received from solicitation campaigns conducted by federated fundraising campaigns.) Of the three components of contributions,

² Estimates should be used with caution because of the small number of sample returns on which they are based.

Figure C

Components of Nonprofit Charitable Organization Revenue, by Asset Size, Reporting Year 1994

Percentage

¹ Includes returns with zero assets or assets not reported.

Government grants showed the largest increase for 1994, 12 percent; these grants surpassed the level of contributions received through direct public support. Total contributions, gifts, and grants as a percentage of total revenue varied depending on the size of the organization. Organizations with assets of \$10 million or more relied on

this source for just 13 percent of their total revenue, while small organizations with assets of less than \$1 million depended on contributions, gifts, and grants for about one-half of their revenue.

Nonprofit charitable organizations reported their detailed expenses on Form 990 by "object categories" (salaries and

² Estimates should be used with caution because of the small number of sample returns on which they are based. NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

wages, pension plan contributions and other employee benefits, legal fees, supplies, and the like), which were then combined into three broad functional categories on the Form 990: program services, management and general, and fundraising (Table 2). Total expenses reported for 1994 were \$546.6 billion, with those relating to specific program services accounting for \$471.3 billion (86 percent of the total). Management and general expenses, which supported the overall organization rather than specific programs, amounted to \$68.7 billion (13 percent of the total). Fundraising activities were \$5.3 billion, and payments to affiliates accounted for an additional \$1.3 billion. (These latter are payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies.)

Types of Nonprofit Charitable Organizations

Figure E presents information on the types of nonprofit charitable organizations exempt under section 501(c)(3) that filed Form 990 or Form 990-EZ (short form) for 1994 [3]. The information is based on responses to a question on the return forms identifying the reason why the organization was not classified as a private foundation. In contrast to a nonprofit charitable organization classified as a public charity, a private foundation is narrowly supported and controlled, usually by an individual, family, or corporation, and does not solicit funds from the general public. It is the

narrow base of support and control that differentiates a private foundation from a public charity. Because of their centralized support and control, private foundations are more strictly regulated than the other section 501(c)(3) organizations. Contributors are subject to special limitations on their individual income tax deductions for contributions to these organizations, and nonoperating foundations, which are the most prevalent type, have mandatory distribution requirements; also, most private foundations are subject to an excise tax on net investment income [4].

As shown in Figure E, hospitals were the leading category of nonprofit charitable organizations in terms of assets and revenue, representing 28 percent of total assets and 45 percent of total revenue. Publicly-supported organizations were the second leading category in terms of revenue with 30 percent of the total. These organizations receive broad financial support from a large number of sources within the general public [5]. Examples are the American Red Cross and the United Way and their affiliated agencies, voluntary health agencies, community foundations, cultural organizations, and a wide variety of community-service organizations. These organizations reported \$86.5 billion in program service revenue, an increase of 9 percent from 1993.

Nonprofit charitable organizations reported liabilities of \$464.0 billion. Tax-exempt bond liabilities amounted to

- ² Excludes most colleges and universities operated by state and local governments.
- 3 Less than \$500,000.
- ⁴ Includes organizations that did not provide an answer regarding type of organization or misrepresented their type of organization on Forms 990 or 990-EZ.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

\$81.0 billion, held mainly by organizations with assets of greater than \$50 million.

Nonprofit Charitable Organizations Classified by NTEE Codes

The National Taxonomy of Exempt Entities (NTEE) is a classification system developed by the National Center for Charitable Statistics, which classifies organizations by institutional purpose and major programs and activities [6]. Data presented here for 1994 are the first from the Statistics of Income studies to use the NTEE codes. The codes are comprised of 26 major groups, which can be aggregated into 10 major categories, as shown in Figure F. Within each major program category, there is wide diversity in the types of organizations conducting the different functions. The organizations were coded on the basis of information provided on their Forms 990 and 990-EZ [7].

Health was the dominant major category based on the NTEE classification, accounting for 39 percent of assets and 58 percent of total revenue. This category includes organizations that promote the wellness of individuals, the general treatment and prevention of disease or illness, including also mental health and illness, and the medical rehabilitation of the physically disabled. Examples are hospitals; nursing or convalescent facilities; health support services such as blood banks, organ banks, and emergency medical transport services; health care financ-

ing activities; substance abuse treatment services; organizations that study ethics or promote the practice of ethical behavior in medical care and research; health associations active in the prevention or treatment of diseases; and medical research institutes. Nearly 90 percent of the total revenue for organizations in this classification was derived from their program services.

The major category of education includes higher education, elementary and secondary schools, correspondence schools, libraries, educational testing services, organizations providing opportunities for continuing education outside the framework of formal education, and student services and organizations. This category accounted for \$263.0 billion in assets, which was more than one-quarter of the total for nonprofit charitable organizations.

Organizations in the human services major category ranked third in the financial statistics, with \$91.1 billion in assets and \$69.1 billion in revenue. Contributions, gifts, and grants represented the major proportion of total revenue for these organizations, \$28.9 billion, which was 42 percent of their total revenue. (The amount of Government grants reported on the long Form 990 by these organizations was \$18.9 billion.) This major category was comprised of organizations in several classifications performing a broad range of services focused on specific needs within the community: housing and shelter programs including housing construction, management, and services

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that can be aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations. See Notes and References.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

to assist in locating, acquiring, or sustaining housing; job training and placement services; public safety, disaster preparedness, and relief services, including activities aiding with the effects of disasters and providing relief to accident victims; recreation and sports programs provided by organizations for camps, parks, and playgrounds and amateur sports activities; crime prevention and legal services; and multipurpose organizations, which provide a broad range of social or human services to individuals and families. (Included in this last description are the American Red Cross, Salvation Army, Volunteers of America, and Travelers' Aid.)

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) Through (9)

The statistics presented in this section are based on the Forms 990 and 990-EZ filed by organizations that are tax-exempt under Code sections 501(c)(4) through (9). Figure G provides general descriptions of the organizations included under these sections. Unlike the nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3), most of these organizations are not eligible to receive tax-deductible contributions. Financial data for organizations covered by these six Code sections are presented in Tables 2, 3, and 4.

Selected data for these organizations are compared for 1994 with 1993 in Figure H. Organizations in three of these

six Code sections filed an increased number of returns: business leagues, chambers of commerce, and real estate boards, section 501(c)(6); social and recreational clubs, section 501(c)(7); and voluntary employees' beneficiary associations, section 501(c)(9). Organizations in the other three Code sections filed slightly fewer returns for 1994 than for 1993.

Highlights of Financial Data

Voluntary employees' beneficiary associations, Code section 501(c)(9), led the other five types of organizations in terms of assets, \$56.0 billion; this represented an increase of 16 percent from 1993. Both civic leagues and social welfare organizations, Code section 501(c)(4), and fraternal beneficiary societies and associations, Code section 501(c)(8), had assets of more than \$40 billion. With the exception of social and recreational clubs, section 501(c)(7), the majority of the asset holdings by organizations in these six Code sections were by organizations with assets greater than \$10 million; for social and recreational clubs, however, 63 percent of assets were held by organizations in the \$1 million to \$10 million range (Figure I).

The types of assets held by the various organizations varied by Code section. (Detailed data on the components of assets are limited to those organizations that filed the longer Form 990; as mentioned earlier, only condensed balance sheets were provided by the smaller-size organiza-

² Excludes most colleges and universities operated by state and local governments.

Figure G

Types of Exempt Organizations, Under Internal Revenue Code Sections 501(c)(3)-(9)

Internal Revenue Code section	Description of organization	General nature of activities
501(c)(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition.	Activities of a nature implied by the description of the class of organization
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
501(c)(5)	Labor, agriculture, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
501(c)(6)	Business leagues, chambers of commerce, and real estate boards	Improving conditions in one or more lines of business
501(c)(7)	Social and recreational clubs	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness, accident, or other benefits to members
501(c)(9)	Voluntary employee beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered under 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members

tions that filed the shorter Form 990-EZ.) Investments in securities were the largest single component of assets for the organizations in five of these Code sections, the exception being social and recreational clubs, section 501(c)(7), which held 65 percent of total assets in land, buildings, and equipment but only 2 percent in securities (Figure J). Civic leagues and social welfare organizations, section 501(c)(4), also had \$11.1 billion in receivables, which are included in Other in Figure J.

In terms of revenue, voluntary employees' beneficiary associations, section 501(c)(9) filers, were also the largest, with \$71.2 billion, rising by 6 percent from 1993. Most of the revenue (90 percent) was in the form of program service revenue, which is defined for these organizations chiefly as payments received from participants, or employers of participants, for health and welfare benefits coverage (Figure K). Civic leagues and social welfare organizations, section 501(c)(4), ranked a distant second in terms of revenue, with \$25.0 billion, also comprised mainly of program service revenue.

Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); for business leagues, chambers of commerce, and real estate boards, section 501(c)(6); and for social and recreational clubs, section 501(c)(7). Figure L shows that organizations with assets of less than \$1 million accounted for a greater percentage of revenue than did comparably-sized nonprofit charitable organizations exempt under section 501(c)(3).

Organizations Filing Form 990-EZ

Form 990-EZ may be filed by organizations that are exempt under Internal Revenue Code section 501(c) with annual gross receipts of less than \$100,000 and assets under \$250,000. The use of this short form by nonprofit charitable organizations that are exempt under Code section 501(c)(3) was generally lower than by organizations in other Code sections, as shown in Figure M. Organizations in three Code sections registered usage of greater than 30 percent of the total returns filed--civic leagues and social welfare organizations, section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and social and recreational clubs, section 501(c)(7).

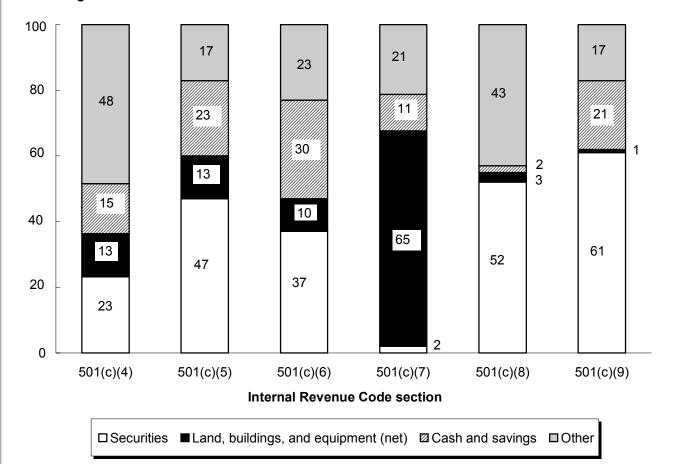

Table 4 presents detailed data on Form 990-EZ filers, by

² Estimates should be used with caution because of the small number of sample returns on which they are based.

Figure J

Components of Total Assets of Organizations Tax-Exempt Under Selected Internal Revenue Code Sections, Reporting Year 1994

Percentage

NOTES: Data are from Forms 990 and 990-EZ. Detail may not add to totals because of rounding and processing tolerances.

Internal Revenue Code section. For these filers, cash, savings, and investments were the largest component of their total assets, with the exception of social and recreational clubs, section 501(c)(7), which reported land and buildings as the largest category of assets. Membership dues and assessments were the major source of revenue for organizations in most of the Code sections. (For the fraternal beneficiary societies, section 501(c)(8), membership dues and assessments and program service revenue

represented comparable shares of the total.) And, for charitable nonprofit organizations exempt under section 501(c)(3), contributions, gifts, and grants comprised nearly one-half of their total revenue.

Summary

For 1994, nonprofit charitable organizations tax-exempt under section 501(c)(3) reported revenue and assets of \$589.1 billion and \$993.4 billion, respectively. These totals represented significant increases over 1993. The number

of returns filed by these organizations was 174,918, which included both the longer Form 990 and the shorter Form 990-EZ. This latter form accounted for 22 percent of the total number of returns filed.

Program service revenue, the fees received for the

programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3) were granted, was \$422.4 billion. It represented 72 percent of total revenue. Contributions, gifts, and grants increased by 7 percent to \$110.7 billion. This source of revenue ac-

Figure M

Types of Returns Filed by Organizations
Tax-Exempt Under Selected Internal Revenue Code
Sections, Reporting Year 1994

Internal Revenue	Nur of re	Forms 990-EZ as a percentage	
		Form 990-EZ	
Code section	Total	of total	
_	(1)	(2)	(3)
501(c)(3)	174,918	38,291	21.9
501(c)(4)	22,127	8,327	37.6
501(c)(5)	20,412	7,030	34.4
501(c)(6)	25,592	7,412	29.0
501(c)(7)	15,777	4,948	31.4
501(c)(8)	7,818	1,400	17.9
501(c)(9)	10,307	458	4.4

counted for nearly one-half of the total revenue for organizations with asset holdings of less than \$1 million but for a much smaller share for larger organizations. As reported by organizations on the long Form 990, Government grants accounted for the largest proportion of this category of support, \$52.0 billion, exceeding direct public support of \$49.2 billion. Expenses rose by 3 percent to \$548.2 billion.

Data are presented using the National Taxonomy of Exempt Entities codes, which classify organizations by institutional purpose and major programs and activities [6]. Health was the predominant major category, accounting for 39 percent of assets and 58 percent of total revenue.

Organizations exempt under Internal Revenue Code sections 501(c)(4) though (9) are diverse in both their purposes and financial characteristics. Voluntary employees' beneficiary associations, section 501(c)(9), clearly led the organizations in the other Code sections in terms of both revenue and assets, with totals of \$71.2 billion and \$56.0 billion, respectively. Program service revenue was the principal source in the form of payments for health and welfare benefits. For three organizations in three different Code sections--labor, agricultural, and horticultural organizations, section 501(c)(5), business leagues, chambers of commerce, and real estate boards, section 501(c)(6), and social and recreational clubs, section 501(c)(7)--membership dues and assessments were the principal source of revenue.

The types of assets held by the organizations varied. Investments in securities were the largest single component of assets for organizations in five of the Code sections, the exception being social and recreational clubs, section 501(c)(7), which held 65 percent of total assets in land, buildings, and equipment but only 2 percent in securities.

Data Sources and Limitations

The statistics in this data release are based on a sample of the 1994 Forms 990, *Return of Organization Exempt From Income Tax*, and Forms 990-EZ, *Short Form Return of Organization Exempt From Income Tax*. Organizations used the 1994 forms when their accounting periods ended between December 31, 1994, through November 30, 1995. These returns comprise the data for Reporting Year 1994 shown in this article. The sample did not include private foundations, which were required to file separate return forms. Most churches and certain other types of religious organizations were also excluded from the sample because they were not required to file a Form 990 or a Form 990-EZ. The sample included only those returns with receipts of more than \$25,000, the filing threshold. Group returns were included.

The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations exempt under other sections were not included in the study. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the database.

Each part of the sample was classified into strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 11,131 returns was selected from a population of 176,621. Sampling rates ranged from 0.45 percent for smallasset classes to 100 percent for organizations with assets of \$10,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 8,526 returns was selected from a population of 104,140. Sampling rates ranged from 2 percent for small-asset classes to 100 percent for organizations with assets of \$10,000,000 or more. The filing populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed prior to 1994. These returns were not included in the samples, nor in the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into

account. Figure N shows CV's for selected financial data. A discussion of methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

Notes and References

- [1] Data for previous years were published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. NOTE: Includes data from Forms 990 and 990-EZ.

- [4] For information on private foundations, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1994," *Statistics of Income Bulletin*, Fall 1997, Volume 17, Number 2.
- [5] A publicly-supported organization receives at least one-third of its total support from governmental units, from contributions made directly or indirectly by the general public, or from a combination of these sources. It is organized and operated in a manner to attract new and additional public or governmental support on a continuous basis. Certain types of publicly-supported organizations, as defined by Internal Revenue Code section 509(a)(2), have additional limits on total gross investment income and unrelated business taxable income.
- [6] For information on the National Taxonomy of Exempt Entities classification system, see Hodgkinson, Virginia A., Weitzman, Murray S., et al., Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector, San Francisco: Jossey-Bass, Inc., 1996; Stevenson, David R., Pollak, Thomas H., and Lampkin, Linda M., et al., State Nonprofit Almanac 1997: Profiles of Charitable Organizations, Washington, DC: The Urban Institute, 1997; and The National Taxonomy of Exempt Entities Manual, Washington, DC: The Urban Institute, 1997.

The 26 major group areas of the National Taxonomy of Exempt Entities (NTEE) can be grouped according to 10 major categories. They are listed below.

- I. Arts, Culture, and Humanities (NTEE area A)
- II. Education(B)
- III. Environment and Animals Environmental Quality, Protection, and Beautification(C) Animal Related (D)
- IV. Health
 Health--General and Rehabilitative (E)
 Mental Health, Crisis Intervention (F)
 Diseases, Disorders, Medical Disciplines (G)
 Medical Research (H)
- V. Human Services
 Crime, Legal Related (I)
 Employment, Job Related (J)
 Food, Agriculture, and Nutrition (K)
 Housing, Shelter (L)

Public Safety, Disaster Preparedness, and Relief(M)

Recreation, Sports, Leisure, Athletics (N) Youth Development (O)

Human Services--Multipurpose and Other (P)

- VI. International, Foreign Affairs (Q)
- VII. Public, Society Benefit
 Civil Rights, Social Action, Advocacy (R)
 Community Improvement, Capacity Building(S)
 Philanthropy, Voluntarism, and Grantmaking
 Foundations (T)
 Science and Technology Research Institutes,

Services (U) Social Science Research Institutes, Services (V) Public, Society Benefit--Multipurpose and

VIII. Religion Related (X)

Other (W)

- IX. Mutual/Membership Benefit (Y)
- X. Unknown, Unclassified (Z)
- [7] The Internal Revenue Service has implemented the National Taxonomy of Exempt Entities (NTEE) classification system as one element of its Business Master File of Exempt Organizations.

¹ Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

² Includes organizations with end-of-year total assets less than \$250,000 and gross receipts less than \$100,000 electing to file Forms 990 rather than Forms 990-EZ.
³ The differences between "total expenses" shown in this table and "total functional expenditures" shown in Table 2 are due to payments to affiliates.

NOTES: Nonprofit charitable organizations exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

by Cecelia Hilgert and Melissa Whitten

otal assets of nonprofit charitable organizations exempt from income tax under Internal Revenue Code 501(c)(3), excluding private foundations, organizations with gross receipts totaling less than \$25,000, most churches, and certain other types of religious organizations, reached a record high for 1995, for the first time surpassing \$1 trillion. This was 15 percent more than for 1994. Total revenue increased by 13 percent over the comparable 1994 amount, rising to \$663.4 billion, of which 67 percent was comprised of revenue from the organizations' program service activities. There were more than 180,000 returns filed, representing a 3-percent increase over the prior year.

Statistics for other organizations receiving taxexempt status under Code sections 501(c)(4) through (9) are also presented in this article [1]. Such organizations are generally diverse both in function and financial character. For 1995, voluntary employee benefit associations, exempt under Code section 501(c)(9), reported assets of \$66.3 billion and revenue of \$72.0 billion, larger amounts than those registered by organizations classified under Code sections 501(c)(4) through (8).

The statistics for charities and other tax-exempt organizations reported in this article are based on data compiled from Form 990, *Return of Organization Exempt from Income Tax*, and Form 990-EZ, the short-form version of this information return. The latter form may be completed by smaller organizations, those with end-of-year assets of less than \$250,000 and gross receipts of \$25,000 to \$100,000; only condensed balance sheets are included on Form 990-EZ.

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

In order to qualify for tax-exempt status, an organization's purpose must be to serve the public good, as opposed to a private interest. Organizations exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational. They may also foster

Cecelia Hilgert is a former employee of the Special Studies Special Projects Section who recently retired. Melissa Whitten is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief. national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety. The activities of nonprofit organizations are limited in that they must further one or more of their exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing authorities, historical societies, and environmental preservation groups. Organizations may not distribute net earnings to a private shareholder or individual. Participation by an exempt organization in activities that can influence legislation, or in a political campaign on behalf of, or in opposition to, any candidate, is also restricted. Generally, contributions to the organization are tax deductible.

Of the 525,134 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 180,931 returns filed for accounting periods that began in 1995 [2]. Those not required to file included churches and certain other religious organizations and also organizations with annual gross receipts totaling less than \$25,000. The number of returns filed for 1995 was 3 percent more than for 1994 (Figure A). Form 990-EZ returns represented 21 percent of total returns filed. (Where possible, Form 990 and Form 990-EZ data are combined in this article.)

Financial Characteristics of Nonprofit Charitable Organizations

Although two-thirds of the returns filed by section 501(c)(3) organizations were filed by organizations with assets of less than \$500,000, these organizations held only 1 percent of the total assets and 4 percent of the revenue (Figure B). In comparison, larger organizations, those with assets of \$10 million or more, represented only 5 percent of the returns filed, but accounted for nearly 89 percent of the total asset holdings and 80 percent of the total revenue reported.

Overall, the total assets of nonprofit charitable organizations grew to \$1.1 trillion, an increase of 15 percent over 1994. As in 1994, investments in securities continued to be the major asset holding, increasing 24 percent to \$433.1 billion, although they were reported only by organizations filing the long version of Form 990. This category represented 38 percent of the total assets reported on that form.

Excess (deficit) of revenue over expenses	40,936	58,725	43.5

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Land, buildings, and equipment, reported on both the long and short versions of Form 990, totaled \$288.1 billion, accounting for 25 percent of the total. (Detailed financial data are provided in Table 1 for nonprofit charitable organizations filing the long Form 990 and in Table 4 for Form 990-EZ filers.)

The composition of asset holdings, as reported on both Form 990 and Form 990-EZ, varied by asset size of the organizations. For small organizations, those with assets of less than \$500,000, cash and savings (short-term account balances) totaled \$6.8 billion and represented one-half of total assets. For organizations with assets of between \$500,000 and \$1 million, land, buildings, and equipment comprised the largest asset account (36 percent), with cash and savings accounting for an additional 28 percent. Land, buildings, and equipment were also recorded as the largest class of holding for organizations with assets between \$1 million and \$50 million, accounting for 35 percent of total assets for this size class. In contrast, investments in securities were the largest asset holding for organizations with assets of \$50

¹ Includes returns with zero assets or assets not reported.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

² Estimates should be used with caution because of the small number of sample returns on which they are based.

million or more, all of which are required to file this long form, representing 43 percent (\$373.7 billion) of their total assets; this represented a 27-percent increase over the 1994 total for this size class.

Total liabilities of nonprofit charitable organizations also increased, by 10 percent from 1994, to \$512.4 billion. Liabilities of \$512.1 billion were reported by those organizations filing the long Form 990. Tax-exempt bond liabilities, as reported by Form 990 filers, amounted to \$93.0 billion, 88 percent of which were held by organizations with assets of \$50 million or more.

Because an owner's equity section does not apply to the balance sheet of a tax-exempt organization, unexpended earnings accrue to a "net worth or fund balance" account instead. The total fund balance or net worth of nonprofit charitable organizations was \$630.7 billion for 1995, up from \$529.3 billion for 1994 (a 19-percent increase).

Program service revenue continued to be the major source of revenue for tax-exempt charitable organizations for 1995. This revenue is comprised of fees collected by organizations in support of their tax-exempt purposes and includes such income as tuition and fees at educational institutions, hospital patient charges (including Medicare and Medicaid payments), admission fees collected by museums or community performance arts groups, YMCA/ YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. For 1995, program service revenue totaled \$443.1 billion, which was 67 percent of total revenue. The largest organizations, those with assets of \$50 million or more, received 73 percent of their total revenue from program service revenue, a larger percentage than organizations with fewer total assets (Figure C).

For 1995, contributions, gifts, and grants received showed a 15-percent increase to \$127.7 billion. This was 19 percent of total revenue received. Figure D presents information on grants received by nonprofit charitable organizations that filed the long Form 990. Of \$126.9 billion reported on that form, \$64.1 billion were comprised of direct public support, which includes contributions, gifts, grants, and bequests that the organizations received directly from public sources, such as individuals, trusts, corporations, estates, and foundations. Gov-

ernment grants totaled \$53.0 billion, and contributions received through indirect public support totaled \$9.7 billion. (This latter category is the total amount of contributions received from solicitation campaigns conducted by federated fundraising agencies.) Direct public support rose by 30 percent and replaced revenue from Government grants, which increased by 2 percent, as the leading source of contributions.

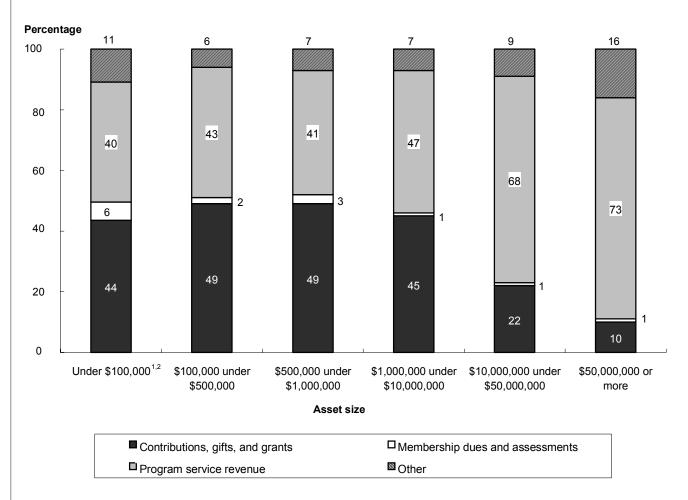

Overall, total contributions, gifts, and grants as a percentage of total revenue varied with organization size. Organizations with assets of \$10 million or more obtained just 12 percent of their total revenue from this source, while small organizations with assets of less than \$1 million relied on contributions, gifts, and grants for 48 percent of their revenue.

Total expenses, as reported on Forms 990 and 990-EZ, rose to \$604.6 billion, a 10-percent increase over 1994. On Form 990, expenses for nonprofit charitable organizations are distributed among three functional, operational areas—program services, fundraising, and management and general. Briefly, program service expenses are those associated with activities which further an organization's exempt purpose; fundraising expenses are those incurred in soliciting contributions, gifts, and grants; and management and general expenses include those administrative and overhead costs which are not specifically related to program services or fundraising activities. Within these three broad categories are several "object categories," including salaries and wages, pension plan contributions and other employee benefits, legal fees, and supplies.

Expenses reported on the long Form 990 totaled \$603.0 billion for 1995, with program service-related expenses accounting for \$522.8 billion (87 percent of the total). Management and general expenses amounted to \$73.1 billion (12 percent of the total). Fundraising activities comprised \$5.5 billion, and payments to affiliates accounted for an additional \$1.5 billion. (These latter represent payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies.) For Form 990-EZ filers, total salaries and wages, reported at \$346.8 million, were the leading expense item, accounting for 21 percent of the \$1.7 billion in total expenses. These filers do not report expenses by functional program category.

Figure C

Types of Nonprofit Charitable Organizations

Figure E presents information on the types of non-profit charitable organizations exempt under section 501(c)(3) that filed Form 990 or Form 990-EZ (short form) for 1995. The information is based on responses to a question on the return forms that requires each organization to identify the reason why it was not classified as a private foundation. Unlike an organization classified as a public charity, a

private foundation is narrowly supported and controlled, usually by an individual, family, or corporation, and does not solicit funds from the general public. It usually carries on its charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to other nonprofit charitable organizations that directly engage in such activities themselves [3].

² Estimates should be used with caution because of the small number of sample returns on which they are based. NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances. Data are from unpublished Statistics of Income tabulations.

² Includes returns with zero assets or assets not reported.

³ Estimates should be used with caution because of the small number of sample returns on which they are based.

² Excludes most colleges and universities operated by State and local governments.

³ Less than \$500,000

⁴ Includes organizations that did not provide an answer regarding type of organization or misrepresented their type of organization on Forms 990 or 990-EZ.

As captured in Figure E, hospitals comprised the leading category of nonprofit charitable organization, again for 1995, in terms of assets and revenue, with 27 percent of total assets and 42 percent of total revenue. The second-leading category in terms of revenue consisted of publicly-supported organizations, those receiving broad financial support from a large number of sources within the general public [4]. Examples of organizations receiving such support include the United Way and its affiliated agencies, the National Wildlife Federation, the American Cancer Society, and the Public Broadcasting Service. Voluntary health agencies, community foundations, cultural organizations, and a wide variety of community-service organizations are also included in this category. The diverse organizations in this category reported \$93.2 billion in program service revenue, an 8-percent increase from 1994.

Nonprofit Charitable Organizations Classified by NTEE Codes

The National Taxonomy of Exempt Entities (NTEE) is a classification system developed by the National Center for Charitable Statistics, which classifies

organizations by institutional purpose and major programs and activities [5]. The codes are comprised of 26 major groups, which are aggregated into 10 major categories, as shown in Figure F. Within each major program category, there is a wide diversity in the types of organizations conducting the different functions. The organizations were coded on the basis of information provided on their Forms 990 and 990-EZ [6].

Based on the NTEE classification, health was the dominant major category in terms of revenue, accounting for 55 percent of the total. Organizations in the health category also held the majority of the total assets (37 percent). This category includes organizations that promote the wellness of individuals, the general treatment and prevention of disease or illness (including also mental health and illness), and the medical rehabilitation of the physically disabled. Examples are hospitals; nursing or convalescent facilities; health support services, such as blood banks, organ banks, and emergency medical transport services; health care financing activities; substance abuse treatment services; organizations that study ethics or promote the practice of ethical behav-

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that can be aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations. See Notes and References.

² Excludes most colleges and universities operated by State and local governments.

³ Less than \$500.000.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances. Data are from unpublished Statistics of Income tabulations.

ior in medical care and research; health associations active in the prevention or treatment of diseases; and medical research. Just over 86 percent of the total revenue for nonprofit charitable organizations, other than private foundations, in this specific classification was derived from program services.

The major category of education includes higher education (excluding most colleges and universities operated by State and local governments), elementary and secondary schools, correspondence schools, libraries, educational testing services, organizations providing opportunities for continuing education outside the framework of formal education, and student services and organizations. Education ranked a distant second in terms of revenue, which totaled \$123.0 billion and accounted for \$303.4 billion in assets—more than one-quarter of the total for nonprofit charitable organizations.

Organizations in the human services major category ranked third in terms of revenue, with \$76.6 billion for 1995. Program service revenue (\$36.3 billion) and contributions, gifts, and grants (\$33.4 billion) together represented 91 percent of the total revenue for these organizations. This major category was comprised of organizations in several classifica-

tions performing a broad range of services focused on specific needs within the community: housing and shelter programs, including housing, construction, management, and services to assist in locating, acquiring, or sustaining housing; job training and placement services; public safety, disaster preparedness, and relief services, including activities related to the effects of disasters and the providing of relief to accident victims; recreation and sports programs provided by organizations for camps, parks, and playgrounds, and amateur sports activities; crime prevention and legal services; and multipurpose organizations providing a broad range of social or human services to individuals and families. (Included in this last category are such organizations as the American Red Cross, the Salvation Army, the Urban League, and YMCA's/YWCA's.)

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4) Through (9)

The statistics presented in this section are based on Forms 990 and 990-EZ filed by organizations tax-exempt under Code sections 501(c)(4) through (9). Figure G provides general descriptions of the organi-

Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition.	Activities of a nature implied by the description of the class of organization
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
501(c)(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
501(c)(6)	Business leagues, chambers of commerce, and real estate boards	Improving conditions in one or more lines of business
501(c)(7)	Social and recreational clubs	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations	Lodges providing for payment of life, sickness, accident, or other benefits to members
501(c)(9)	Voluntary employee beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered under 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members

zations included under these sections. Unlike the nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3), most of these organizations are not eligible to receive tax-deductible contributions. Financial data for organizations covered by these six Code sections are presented in Tables 2, 3, and 4.

Figure H compares selected data for these organizations for 1995 and 1994. Organizations under three of the Code sections filed an increased number of returns for 1995: labor, agricultural, and horticultural organizations, section 501(c)(5); social and recreational clubs, section 501(c)(7); and fraternal beneficiary societies and associations, section 501(c)(8). Organizations under the other three Code sections filed somewhat fewer returns for 1995 than for 1994.

Highlights of Financial Data

Voluntary employees' beneficiary associations, Code section 501(c)(9), led other types of organizations in terms of assets (\$66.3 billion). This represented an increase of 18 percent over 1994. The assets of fraternal beneficiary societies and associations rose by 20 percent, to \$52.5 billion. With the exception of social and recreational clubs, section 501(c)(7), the majority of the asset holdings by organizations under these six Code sections was reported by organizations with assets of \$10 million or more; for social and recreational clubs, however, organizations with assets of \$10 million or more represented just 20 percent of the total, while organizations with assets in the \$1 million to \$10 million range accounted for 61 percent (Figure I).

The types of assets held by these six groups of

¹ Includes returns with zero assets or assets not reported.

NOTES: Data are from Forms 990 and 990-EZ. Detail may not add to totals because of rounding and processing tolerances. Data are from unpublished Statistics of Income tabulations.

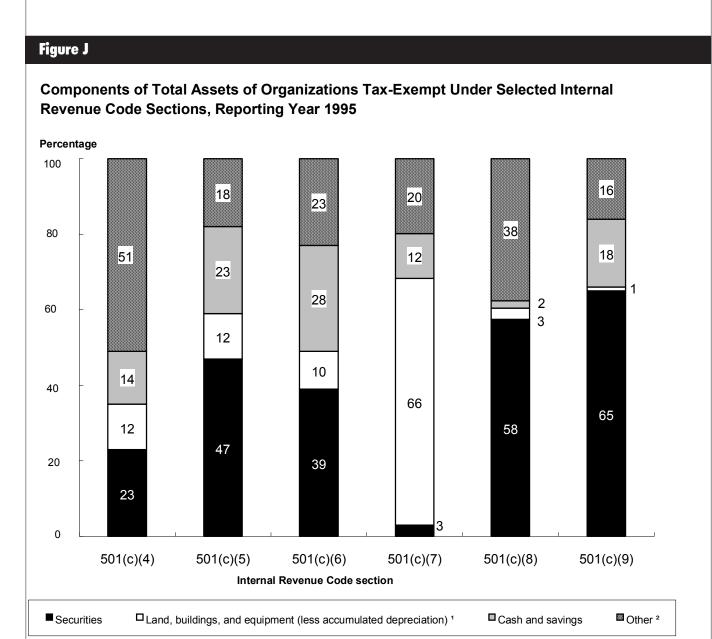

organizations varied considerably. (Detailed data on the components of assets are limited to those organizations that filed the long Form 990; as mentioned earlier, only condensed balance sheets were provided by the smaller-size organizations that filed the short Form 990-EZ.) Investments in securities were the largest single component of assets for the organizations reporting under five of the six Code sections, the exception being social and recreational clubs, section 501(c)(7), where 66 percent of total assets were in land, buildings, and equipment, but only 3 percent in securities (Figure J). Civic leagues and social welfare organizations, section 501(c)(4), also reported \$12.8 billion in receivables, which are included in "Other" in Figure J.

In terms of revenue, voluntary employees' beneficiary associations, section 501(c)(9), were also the largest of the six categories, with \$72.0 billion, rising by just 1 percent from 1994. Most of the revenue (88)

percent) was in the form of program service revenue, which is defined for these organizations chiefly as payments received from participants, or employers of participants, for health and welfare benefits coverage (Figure K). Civic leagues and social welfare organizations, section 501(c)(4), ranked a distant second in terms of revenue, with \$28.6 billion, also comprised mainly of program service revenue. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); for business leagues, chambers of commerce, and real estate boards, section 501(c)(6); and for social and recreational clubs, section 501(c)(7).

Figure L shows that organizations with assets of less than \$1 million accounted for a larger percentage of revenue than did comparably-sized nonprofit charitable organizations exempt under section 501(c)(3).

² Estimates should be used with caution because of the small number of sample returns on which they are based.

¹ Does not include "investments in land, buildings, and equipment."

Organizations Filing Form 990-EZ

Form 990-EZ may be filed by organizations exempt under Internal Revenue Code section 501(c) with annual gross receipts of less than \$100,000 and assets under \$250,000. Figure M shows the use of Form 990-EZ by organizations in the subsection codes. Organizations reporting under three Code sections registered usage of more than 30 percent—civic leagues and social welfare organizations,

section 501(c)(4); labor, agricultural, and horticultural organizations, section 501(c)(5); and social and recreational clubs, section 501(c)(7). Form 990-EZ was introduced for Tax Year 1989, and its use has grown steadily each year.

The organizations reporting on Form 990-EZ accounted for small proportions of assets and revenue. In terms of assets, only labor, agricultural, and horticultural organizations, section 501(c)(5), and

² Includes miscellaneous receivables, "inventories for sale or use," "prepaid expenses and deferred charges," "investments in land, buildings, and equipment less accumulated depreciation," and "other assets."

NOTES: Data are Forms 990 and 990-EZ. Detail may not add to totals because of rounding and processing tolerances.

¹ Excludes private foundations, most churches, and certain other types of religions organizations.

NOTE: Organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 could elect to file Forms 990-EZ rather than Forms 990.

social and recreational clubs, section 501(c)(7), accounted for more than 1 percent of the total assets held by organizations under the subsection code. In terms of revenue, social and recreation clubs reporting on Form 990-EZ represented 3 percent of the total.

Table 4 presents detailed data on Form 990-EZ filers, by Internal Revenue Code section. For these filers, cash, savings, and investments were the largest component of total assets, with the exception of social and recreational clubs, section 501(c)(7), which reported total assets nearly equally divided between land and buildings on the one hand and cash, savings, and investments on the other. For the relatively few organizations covered under section 501(c)(3), cash, savings, and investments, together, accounted for two-thirds of Form 990-EZ total assets. Membership dues and assessments were the major source of revenue for organizations reporting under most of the seven Code sections. For the fraternal beneficiary societies, section 501(c)(8), membership dues and assessments and program service revenue both represented comparable shares of the total. In contrast, contributions, gifts, and grants comprised nearly half of the total revenue of organizations exempt under section 501(c)(3) filing Form 990-EZ.

The majority of organizations reporting under each of the seven Code sections that were eligible to file Form 990-EZ for 1995 elected to file the short

version of the information return, rather than the long Form 990 [7]. For eligible organizations exempt under five of these subsection codes, 501(c)(3) through 501(c)(7), Form 990-EZ was filed at a rate of 70 percent or higher. The majority of both assets and revenue reported by organizations exempt under the seven subsection codes and having end-of-year assets of under \$250,000 and gross receipts of under \$100,000 were reported on Forms 990-EZ. (Additional financial data for organizations that were eligible to file Form 990-EZ but filed the long Form 990 instead are included with the data for Form 990 filers.)

Summary

For 1995, for the first time, assets reported by nonprofit charitable organizations (excluding private foundations) tax-exempt under section 501(c)(3) exceeded \$1 trillion. These organizations also reported total revenue of \$663.4 billion. The totals for assets and revenue were the result of double-digit increases over 1994 totals, 15 percent and 13 percent, respectively. The number of returns filed by these organizations was 180,931, which included both the long Form 990 and the short Form 990-EZ. This latter form accounted for 21 percent of the total number of returns filed by these nonprofit charities.

Program service revenue, the fees received for programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3)

² Less than 0.05.

were granted, was \$443.1 billion for 1995. It represented two-thirds of total revenue. Contributions, gifts, and grants increased by 15 percent to \$127.7 billion. This source of revenue accounted for nearly one-half of the total revenue of organizations with asset holdings of less than \$1 million, but for a much smaller share of the total revenue of the larger organizations. As reported by organizations using the long Form 990, contributions received through direct public support accounted for the largest proportion of total contributions and gifts, \$64.1 billion, exceeding contributions received through Government grants, \$53.0 billion. Expenses rose by 10 percent to \$604.6 billion.

Using the National Taxonomy of Exempt Entities codes, which classify organizations by institutional purpose and major programs and activities, health care was the predominant major category, accounting for 37 percent of assets and 55 percent of total revenue reported by nonprofit charitable organizations under Code section 501(c)(3).

Organizations exempt under Internal Revenue Code sections 501(c)(4) though (9) are diverse in both their purposes and financial characteristics. Voluntary employees' beneficiary associations, section 501(c)(9), led the organizations under Code sections other than 501(c)(3) in terms of both revenue and assets, with totals of \$72.0 billion and \$66.3 billion, respectively. Program service revenue was the principal source of revenue and consisted of payments for health and welfare benefits. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5), business leagues, chambers of commerce, and real estate boards, section 501(c)(6), and social and recreational clubs. section 501(c)(7).

The types of assets held by the organizations varied. Investments in securities were the largest single component of assets for organizations under five of these six Code sections, the exception being social and recreational clubs, section 501(c)(7), two-thirds of whose assets were land, buildings, and equipment.

Data Sources and Limitations

The statistics in this article are based on a sample of the 1995 Forms 990, *Return of Organization Exempt From Income Tax*, and Forms 990-EZ, *Short Form* Return of Organization Exempt From Income Tax. Organizations used the 1995 forms when their accounting periods ended any time between December 31, 1995, and November 30, 1996. The sample did not include private foundations, which were required to file separate return forms. Most churches and certain other types of religious organizations were also excluded from the sample because they were not required to file Form 990 or Form 990-EZ. The sample included only those returns with receipts of more than \$25,000, the filing threshold. There were 131 group returns, which are filed by a central or parent organization to consolidate their subsidiaries, included in the study.

The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations tax-exempt under other Code sections were excluded. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 11,925 returns was selected from a population of 184,629. Sampling rates ranged from 0.45 percent for organizations reporting smaller amounts for total assets to 100 percent for organizations with total assets of \$10,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 8,800 returns was selected from a population of 104,726. Sampling rates ranged from 2 percent for organizations reporting smaller amounts for total assets to 100 percent for organizations with assets of \$10,000,000 or more. The filing populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed with tax periods prior to 1995.

Because the data are based on samples, they are subject to sampling error. In order to use these

statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure N shows CV's for selected financial data. A discussion of methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

Figure N

¹ Includes returns with zero assets or assets not reported. Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

² Includes organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 electing to file Forms 990 rather than Forms 990-EZ.

³ The differences between "total expenses" shown in this table and "total functional expenditures" shown in Table 2 are due to payments to affiliates, which are not considered functional expenditures, and certain processing tolerances.

NOTES: Nonprofit charitable organizations exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Table 2.--Form 990 Returns of Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(3)-(9): Total Functional Expenditures, by Code Section

¹ Excludes private foundations, most churches, and certain other types of religious organizations.

NOTES: Organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 could elect to file Forms 990-EZ rather than Forms 990. Detail may not add to totals because of rounding and processing tolerances. Estimates in this table should be used with caution because of the small number of sample returns on which they are based.

Data Release

onprofit charitable organizations exempt from income tax under Internal Revenue Code section 501(c)(3) filed over 192,000 information returns for 1996, and reported nearly \$1.3 trillion in assets. These and other statistics presented in this data release are based on data compiled from Form 990, Return of Organization Exempt from Income Tax, and Form 990-EZ, Short Form Return of Organization Exempt from Income Tax [1].

Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational. They may also foster national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety. Their activities are restricted in that they must further one or more of these exempt purposes. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing authorities, historical societies, and environmental preservation groups. Each must serve the public good (as opposed to private interests) to qualify for tax-exempt status, and may not distribute net earnings to a private shareholder or individual. In addition, they are restricted in activities that can influence legislation, and cannot participate in any political campaign on behalf of, or in opposition to, any candidate for public office. Such nonprofit charitable organizations are eligible to receive taxdeductible donations under Code section 170.

Of the 654,186 nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 192,059 returns filed for accounting periods that began in 1996 [2]. Those not required to file included religious organizations and organizations with annual gross receipts of less than \$25,000. (Private foundations exempt under section 501(c)(3) of the Internal Revenue Code file a different information return, and are not included in the data [3].) Figure A shows that the number of returns filed for 1996 increased by approximately 6 percent from 1995. The number of

This data release was written by Paul Arnsberger, an economist with the Special Studies Special Projects Section, under the direction of Michael Alexander, Chief.

Excess of revenue over expenses	58,725	66,429	13.1

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

Form 990-EZ returns represented nearly 22 percent of total returns filed. This shortened return form is for organizations with gross receipts of less than \$100,000 and assets of less than \$250,000; however, over one-quarter of the organizations meeting these criteria filed the long form.

Total revenue of nonprofit charitable organizations exempt under Code section 501(c)(3) was \$704.3 billion for 1996, an increase of 6.2 percent from 1995. Nonprofit revenue exceeded expenses by \$66.4 billion; this figure represented an increase of 13.1 percent from 1995. Program service revenue—the fees collected by organizations for the programs operated in support of their tax-exempt purposes—was the primary source of revenue for charities. It totaled \$467.6 billion for 1996, which represented two-thirds of total revenue for these organizations. Charities filing returns also received \$137.7 billion dollars in contributions, gifts, and grants for 1996, an increase of 7.8 percent from 1995.

Total assets grew to \$1.3 trillion, an increase of 13.2 percent from 1995. Cash and investments of \$772.4 billion represented approximately 60 percent

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that are aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

of charitable organization assets. (See Table 1 for selected balance sheet and income statement items for Form 990 filers; Table 2 provides detailed functional expenditures for Form 990 filers; and Table 3 shows balance sheet and income statement items for Form 990-EZ filers.)

Figure B presents information on the types of nonprofit charitable organizations based on the National Taxonomy of Exempt Entities (NTEE), a classification system developed by the National Center for Charitable Statistics. The NTEE system classifies organizations by institutional purpose and major programs and activities [4]. It is comprised of 26 major groups, which are then aggregated into 10 categories. The organizations were coded on the basis of information provided on their Forms 990 or 990-EZ.

There were over 74,000 human service organizations in 1996, comprising almost 39 percent of the total number of nonprofit charities filing returns with the IRS. Educational and health-related organizations, while fewer in number, held the majority of assets, a combined \$843 billion. Organizations in the

health category received the most revenue for 1996, nearly \$386 billion. Eighty-five percent of this revenue was generated by program services, by far the largest portion of revenue of any of the 10 major categories.

Data Sources and Limitations

The statistics in this data release are based on a sample of the 1996 Forms 990, *Return of Organization Exempt from Income Tax*, and Forms 990-EZ, *Short Form Return of Organization Exempt from Income Tax*. Organizations used the 1996 forms when their accounting periods ended during the time period December 1996, through November 1997. These returns comprise the data for Reporting Year 1996 shown in this data release. Most churches and other religious organizations were excluded from the sample because they were not required to file Form 990 or Form 990-EZ. The sample included only those returns with receipts of more than \$25,000, the filing threshold.

The data presented were obtained from returns as originally filed with the Internal Revenue Service.

² Excludes most colleges and universities operated by State and local Governments

They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

The sample was classified into strata based on size of total assets, with each stratum sampled at a different rate. A sample of 12,912 returns was selected from a population of 194,580. Sampling rates ranged from 0.47 percent for small asset classes to 100 percent for organizations with assets of \$10,000,000 or more. The populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed for reporting years prior to 1996. These returns were not included in the sample, nor in the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure C shows CV's for selected financial data. A discussion of methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

Total revenue	1.43
Total expenses	1.57
Total assets	1.46
Total liabilities	3.16

NOTE: Includes data from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3).

- Number 3. See also Meckstroth, Alicia and Arnsberger, Paul, "A 20-Year Review of the Nonprofit Sector, 1975-1995," *Statistics of Income Bulletin*, Fall 1998, Volume 18, Number 2, and Riley, Margaret, "Unrelated Business Income of Nonprofit Organizations: Highlights of 1995 and a Review of 1991-1995," *Statistics of Income Bulletin*, Spring 1999, Volume 18, Number 4.
- [2] Data presented in this data release are from 1996 Forms 990 and 990-EZ. The total number of nonprofit charitable organizations, including those not required to file Form 990 or Form 990-EZ, was obtained from the Internal Revenue Service Exempt Organizations Business Master File, and does not include private foundations filing Form 990-PF, *Return of Private Foundation*. A file containing Business Master File records of exempt organizations is available on Statistics of Income's website, which can be accessed at: http://www.irs.ustreas.gov/prod/tax stats/index.html.
- [3] Unlike an organization classified as a public charity, a private foundation is narrowly supported and controlled, usually by an individual, family, or corporation, and does not solicit funds from the general public. It usually carries on its charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities. For more information on private foundations, see Whitten, Melissa, "Private Foundations and Charitable Trusts, 1996," *Statistics of Income Bulletin*, Fall 1999, Volume 19, Number 2.
- [4] For information on the National Taxonomy of Exempt Entities classification system, see Hodgkinson, Virginia A.; Weitzman, Murray S.; et al., Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector, Jossey-Bass, Inc., 1996; Stevenson, David R.; Pollak, Thomas H.; and Lampkin, Linda M.; et al., State Nonprofit Almanac 1997: Profiles of Charitable Organizations, The Urban Institute, 1997; and The National Taxonomy of Exempt Entities Manual, The Urban Institute, 1997.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Includes returns with zero assets or assets not reported.

² The differences between "total expenses" shown in this table and "total functional expenditures" shown in Table 2 are due to payments to affiliates, which are not considered functional expenditures, and certain processing tolerances.

NOTES: Nonprofit charitable organizations exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding and processing tolerances.

NOTES: Data exclude private foundations, most churches, and certain other types of religious organizations. Organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 could elect to file Forms 990-EZ rather than Forms 990. Detail may not add to totals because of rounding and processing tolerances.

by Paul Arnsberger

onprofit charitable organizations exempt from income tax under Internal Revenue Code section 501(c)(3) filed nearly 199,000 information returns and reported \$1.4 trillion in assets for 1997, increases of 4 percent and 11 percent, respectively, from the previous year. Total revenue rose 7 percent to \$754.6 billion, and total expenses showed a 6-percent increase to \$677.1 billion [1]. These statistics exclude private foundations, most organizations with receipts totaling less than \$25,000, as well as most churches and certain other types of religious organizations.

Data for other organizations receiving tax-exempt status under Code sections 501(c)(4) through (9) are also presented in this article. Such organizations are generally diverse both in function and financial character. For 1997, voluntary employee benefit associations, exempt under Code section 501(c)(9), reported assets of \$94.8 billion and revenue of \$85.4 billion, larger amounts than those registered by organizations classified under each of the Code sections 501(c)(4) through (8).

The statistics for charities and other tax-exempt organizations reported in this article are based on data compiled from Form 990, *Return of Organization Exempt from Income Tax*, and Form 990-EZ, the short form version of this information return. The latter form may be completed by smaller organizations, those with end-of-year assets of less than \$250,000 and gross receipts of \$25,000 to \$100,000; only condensed income statements and balance sheets are included for filers of Form 990-EZ. Forms 990-EZ accounted for 25 percent of the returns filed by organizations exempt under Code sections 501(c)(3) through (9) for 1997.

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501 (c)(3)

In order to qualify for tax-exempt status, an organization's purpose must be to serve the public good, as opposed to a private interest. Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational. They may also

Paul Arnsberger is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief. foster national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety. The activities of nonprofit organizations are limited in that they must further one or more of the purposes for which they were granted tax-exempt status. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing organizations, historical societies, and environmental preservation groups. Organizations may not distribute net earnings to a private shareholder or individual. Participation by an exempt organization in activities that can influence legislation, or in a political campaign on behalf of, or in opposition to, any candidate, is also restricted. Generally, contributions to the organization are tax deductible [2].

Of the 580,416 active nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), there were 198,957 returns filed for accounting periods that began in 1997 [3]. Those not required to file included churches and certain other religious organizations, as well as organizations with annual gross receipts totaling less than \$25,000 [4]. Nonprofit private foundations tax-exempt under Code section 501(c)(3) are required to file Form 990-PF, *Return of Private Foundation* [5]. The number of returns filed by nonprofit charitable organizations for 1997 was 4 percent more than for 1996 (Figure A). Form 990-EZ returns represented 22 percent of total returns filed.

Financial Characteristics of Nonprofit Charitable Organizations

Although 65 percent of the returns filed by section 501(c)(3) organizations were filed by organizations with assets of less than \$500,000, these organizations held only 1 percent of the total assets and received 4 percent of total revenue (Figure B). In comparison, larger organizations, those with assets of \$10 million or more, represented less than 6 percent of the returns filed, but accounted for nearly 90 percent of the total asset holdings and 81 percent of the total revenue reported.

Overall, the total assets of nonprofit charitable organizations grew to \$1.4 trillion, an increase of 11 percent over 1996. Cash, savings, and investments were the primary component of assets for these

organizations, accounting for 61 percent of the total. Land, buildings, and equipment owned by nonprofits (but not for investment purposes) represented 22 percent of total assets [6].

The nonprofit charitable organizations in this study reported total revenue of \$754.6 billion for 1997. Eighty-one percent of this was generated by organizations with assets over \$10 million (only 6 percent of the population). Program service revenue was the major source of revenue for these organizations. This revenue is comprised of the fees collected by organizations in support of their tax-exempt purposes and includes such income as tuition and fees at educational institutions, hospital patient charges (including Medicare and Medicaid payments), admission fees collected by museums or community performance arts groups, YMCA/YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. Overall, program service revenue totaled \$486.4 billion, a 4-percent increase from 1996. Figure C illustrates the types of revenue received by organizations of different sizes. The largest organiza-

tions, those with assets of \$10 million or more, received 69 percent of their total revenue from program service revenue, a larger percentage than organizations with fewer total assets.

Total expenses, as reported on Forms 990 and 990-EZ, rose to \$677.1 billion, a 6-percent increase over 1996. Salaries, other compensation, and employee benefits, the largest expense category for nonprofit charitable organizations, also increased by 6 percent, to \$277.1 billion. Grants and similar amounts

paid accounted for 13 percent of total expenses, a slightly larger portion than in 1996.

On Form 990 (but not included on Form 990-EZ), expenses for nonprofit charitable organizations are distributed among four areas: program services, fundraising, management and general, and payments to affiliates. Briefly, program service expenses are those associated with activities that further an organization's exempt purpose; fundraising expenses are those incurred in soliciting contributions, gifts, and

² Includes "interest on savings and temporary cash investments," "dividends and interest from securities," and "other investment income" from Form 990 and "investment income" from Form 990-EZ.

grants; and management and general expenses include those administrative and overhead costs which are not specifically related to program services or fundraising activities. Within these three broad areas are specific categories such as salaries and wages, grants and allocations, professional fees, and occupancy. The fourth area includes payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies. Program service expenses accounted for the vast majority (87 percent) of total expenses reported by filers of Form 990; management and general expenses totaled 12 percent; and fundraising expenses and payments to affiliates, combined, accounted for slightly more than 1 percent.

Nonprofit Charitable Organizations Classified by NTEE Codes

The National Taxonomy of Exempt Entities (NTEE) is a classification system developed by the National Center for Charitable Statistics, which classifies organizations by institutional purpose and major programs and activities [7]. The codes are com-

prised of 26 major groups, which are aggregated into 10 program categories, as shown in Figure D. Within each program category, there is a wide diversity in the types of organizations conducting the different functions. The organizations were coded on the basis of information provided on Forms 990 and 990-EZ.

Based on the NTEE classification, health was the dominant program category in terms of revenue, accounting for 52 percent of the total. Organizations in the health category also held the largest portion of total assets (35 percent). This category includes organizations that promote the wellness of individuals, the general treatment and prevention of disease or illness (including mental health and illness), and the medical rehabilitation of the physically disabled. Examples are hospitals; nursing or convalescent facilities; health support services, such as blood banks, organ banks, and emergency medical transport services; health care financing activities; substance abuse treatment services; organizations that study ethics or promote the practice of ethical behavior in medical care and research: health associations active in the prevention or treatment of diseases; and medical research. Just over 85 percent of the total rev-

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that are aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations.

NOTE: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations.

enue for nonprofit charitable organizations in this category was derived from their program services.

The program category of education includes higher education, elementary and secondary schools, correspondence schools, libraries, educational testing services, organizations providing opportunities for continuing education outside the framework of formal education, and student services and organizations. Education ranked a distant second in terms of revenue, which totaled \$144.7 billion, and accounted for \$404.6 billion in assets—more than one-quarter of the total for nonprofit charitable organizations.

Over one-third of Forms 990 and 990-EZ filed for 1997 were classified as human service organizations. Program service revenue (\$44.3 billion) and contributions, gifts, and grants received (\$38.5 billion) together represented nearly 90 percent of the total revenue for these organizations. This category was comprised of organizations in several classifications performing a broad range of services focused on specific needs within the community: housing and shelter programs, including housing, construction, management, and services to assist in locating, acquiring, or sustaining housing; job training and placement services; public safety, disaster preparedness,

and relief services, including activities related to the effects of disasters and the providing of relief to accident victims; recreation and sports programs provided by organizations for camps, parks, and playgrounds, and amateur sports activities; crime prevention and legal services; and multipurpose organizations which provide a broad range of social or human services to individuals and families. (Included in this last category are such organizations as the American Red Cross, Salvation Army, Urban League, and YMCA's/YWCA's.)

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4)-(9)

The statistics presented in this section are based on Forms 990 and 990-EZ filed by organizations tax-exempt under Code sections 501(c)(4) through (9). Figure E provides general descriptions of organizations included under these sections. Unlike nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3), most contributions to these organizations are not tax-deductible. Financial data for organizations covered by these six Code sections are presented in Tables 2, 3, and 4.

Figure E

Types of Tax-Exempt Organizations Under Internal Revenue Code Sections 501(c)(3)-(9)

Internal Revenue Code section	Description of organization	General nature of activities
501(c)(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
501(c)(5)	Labor, agriculture, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
501(c)(6)	Business leagues, chambers of commerce, and real estate boards	Improving conditions in one or more lines of business
501(c)(7)	Social and recreational clubs	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations	Lodges providing for payment of life, sickness, accident, or other benefits to members
501(c)(9)	Voluntary employee beneficiary associations	Providing for payment of life, sickness, accident, or other benefits to members

Highlights of Financial Data

Voluntary employees' beneficiary associations, Code section 501(c)(9), reported \$94.8 billion in assets for 1997, considerably more than organizations exempt under sections 501(c)(4) through (8) (Figure F). This amount represented an increase of 43 percent from Reporting Year 1995. (A Statistics of Income study on 501(c)(4) through (9) organizations was not conducted for 1996.) Civic leagues and social welfare associations, section 501(c)(4), and fraternal beneficiary societies, section 501(c)(8), reported \$56.2 billion and \$53.4 billion in assets, respectively, for 1997. With the exception of social and recreational clubs, section 501(c)(7), the majority of the asset holdings by organizations under these six Code sections was reported by the largest organizations (those with assets of \$10 million or more); for social and recreational clubs, however, the largest organizations represented just 25 percent of total assets. Social and recreational clubs differed from other types of organizations in the components of their assets as well. While organizations exempt under Code sections (c)(4), (5), (6), (8), and (9) held the majority of their assets in the form of cash, savings, and investments, social and recreational clubs reported 64 percent of their assets as land and buildings.

In terms of revenue, voluntary employees' beneficiary associations, section 501(c)(9), were also the

largest of the six categories, with \$85.4 billion, rising by 19 percent from 1995. Civic leagues and social welfare organizations, section 501(c)(4), ranked a distant second in terms of revenue, with \$35.6 billion, an increase of 25 percent over the 2-year period. Program service revenue was the primary source of income for three types of organizations: civic leagues and social welfare organizations, section 501(c)(4); fraternal beneficiary societies, section 501(c)(8); and voluntary employees' beneficiary associations, section 501(c)(9) (Figure G). These three types of organizations reported at least three-fourths of their revenue from program services. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); business leagues, chambers of commerce, and real estate boards, section 501(c)(6): and social and recreational clubs, section 501(c)(7). Unlike nonprofit charities exempt under 501(c)(3), contributions, gifts, and grants were a minor source of income for those organizations exempt under sections 501(c)(4) through (9).

Organizations Filing Form 990-EZ

Form 990-EZ may be filed by organizations that are exempt under Internal Revenue Code section 501(c), with annual gross receipts of less than \$100,000 and assets under \$250,000. The form was introduced for Tax Year 1989, and its use has grown steadily each

NOTE: Data are from Forms 990 and 990-EZ.

year. Form 990-EZ requires less detailed reporting than the long form, especially on the balance sheet portion of the return.

Table 4 presents detailed data on Form 990-EZ filers, by Internal Revenue Code section. With the exception of voluntary employee beneficiary associations, Forms 990-EZ represented between 22 percent and 39 percent of all information returns filed. (Only 3 percent of organizations exempt under 501(c)(9) filed the short form.) The organizations reporting on Form 990-EZ accounted for very small proportions of total assets. Only labor, agricultural, and horticultural organizations, section 501(c)(5), and social and recreational clubs, section 501(c)(7), accounted for more than 2 percent of the total assets held by organizations under the subsection code. The assets of non-

profit charitable organizations that filed Form 990-EZ represented just one-tenth of a percent of the total assets of organizations exempt under section 501(c)(3). (Data for organizations that were eligible to file Form 990-EZ but filed the longer Form 990 instead are included with the data for filers of Form 990.)

Summary

For 1997, assets reported by nonprofit charitable organizations (excluding private foundations) tax-exempt under section 501(c)(3) totaled \$1.4 trillion. These organizations also reported total revenue of \$754.6 billion. The totals for assets and revenue increased 11 percent and 7 percent over 1996, respectively. The number of returns filed by these

organizations was 198,957, which included both the longer Form 990 and the shorter Form 990-EZ.

Program service revenue, the fees received for the programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3) were granted, was \$486.4 billion for 1997. It represented nearly two-thirds of total revenue. Contributions, gifts, and grants increased by 6 percent to \$146.2 billion. This source of revenue accounted for over one-half of the total revenue of organizations with asset holdings of less than \$1 million, but for a much smaller share of the total revenue of the larger organizations. Expenses rose by 6 percent to \$677.1 billion.

Using the National Taxonomy of Exempt Entities codes, which classify organizations by institutional purpose and major programs and activities, health care was the predominant major category, accounting for 35 percent of assets and 52 percent of total revenue reported by nonprofit charitable organizations under Code section 501(c)(3).

Organizations exempt under Internal Revenue Code sections 501(c)(4) though (9) are diverse in both their purposes and financial characteristics. Voluntary employees' beneficiary associations, section 501(c)(9), led these organizations in terms of both assets and revenue, with totals of \$94.8 billion and \$85.4 billion, respectively. Program service revenue was the principal source of revenue and consisted of payments for health and welfare benefits. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); business leagues, chambers of commerce, and real estate boards, section 501(c)(6); and social and recreational clubs, section 501(c)(7).

Data Sources and Limitations

The statistics in this article are based on a sample of the 1997 Forms 990, *Return of Organization Exempt From Income Tax*, and Forms 990-EZ, *Short Form Return of Organization Exempt From Income Tax*. Organizations used the 1997 forms when their accounting periods ended any time between December 31, 1997, and November 30, 1998. The sample did not include private foundations, which were required to file separate return forms. Most churches and certain other types of religious

organizations were also excluded from the sample because they were not required to file Form 990 or Form 990-EZ. The sample included only those returns with receipts of more than \$25,000, the filing threshold.

The sample design was split into two parts: the first part included returns of organizations exempt under section 501(c)(3), and the second part included organizations exempt under sections 501(c)(4) through (9). Returns of organizations tax-exempt under other Code sections were excluded. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 13,757 returns was selected from a population of 202,620. Sampling rates ranged from 1.05 percent for organizations reporting smaller amounts for total assets to 100 percent for organizations with total assets of \$10,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 9,513 returns was selected from a population of 105,784. Sampling rates ranged from 2.05 percent for organizations reporting smaller amounts for total assets to 100 percent for organizations with assets of \$10,000,000 or more. The filing populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed with tax periods prior to 1997. These returns were not included in the final sample, nor in the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure H shows CV's for selected financial data. A discussion of methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

Figure H

Coefficients of Variation for Selected Items, by Selected Internal Revenue Code Sections,

Reporting Year 1997

- [3] Data presented in this article are from 1997 Forms 990 and 990-EZ. The total number of nonprofit charitable organizations, including

- those not required to file Form 990 or Form 990-EZ, was obtained from the Internal Revenue Service Exempt Organizations Business Master File (December 1997) and does not include private foundations filing Form 990-PF, *Return of Private Foundation*.
- [4] The \$25,000 filing threshold is an average of an organization's gross receipts over the previous 3 years.
- [5] For information on private foundations, see Whitten, Melissa, "Private Foundations and Charitable Trusts, 1997," in this issue.
- [6] The Form 990 includes a detailed balance sheet on which organizations classify their assets among a number of different components. The balance sheet on the shorter Form 990-EZ lists only three types of assets: cash, savings, and investments; land and buildings; and other assets. For the sake of consistency, the assets of organizations filing the long form are collapsed into these three categories. Detailed balance sheet data for Form 990 filers are provided in Tables 1 and 3.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Includes returns with zero assets or assets not reported.

² The differences between "total expenses" shown in this table and "total functional expenditures" shown in Table 2 are due to payments to affiliates, which are not considered functional expenditures.

NOTES: Nonprofit charitable organizations exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding.

NOTES: Organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 could elect to file Forms 990-EZ rather than Forms 990. Detail may not add to totals because of rounding.

by Paul Arnsberger

onprofit charitable organizations exempt from income tax under Internal Revenue Code section 501(c)(3) filed over 207,000 information returns for Reporting Year 1998, an increase of 4 percent from the previous year. These organizations reported \$1.4 trillion in assets, a decrease of 6 percent from 1997, and \$752.0 billion in revenue. slightly less than the previous year. Decreases in assets, revenue, and certain other items can be attributed to two very large, related organizations that filed returns for 1997, but not for 1998. The Teachers Insurance Annuity Association and the College Retirement Equities Fund (collectively known as TIAA-CREF) are pension organizations whose taxexemption was revoked under The Taxpayer Relief Act of 1997 [1,2]. If these two organizations are excluded from the 1997 data, the total assets and revenue of 501(c)(3) organizations would have increased by 10 percent and 6 percent, respectively, for 1998 [Figure A]. The statistics in this article exclude private foundations, most organizations with receipts totaling less than \$25,000, as well as most churches and certain other types of religious organizations.

Data for certain other organizations with taxexempt status under Code sections 501(c)(4) through (9) are also presented in this article. Such organizations are generally diverse both in function and financial character. For 1998, voluntary employee benefit associations, exempt under Code section 501(c)(9),

Decreases in assets, revenue, and certain other items can be attributed to two very large, related organizations that filed returns for 1997, but not for 1998.

reported assets of \$109.7 billion and revenue of \$86.7 billion, larger amounts than those registered by organizations classified under each of the Code sections, 501(c)(4) through (8).

The statistics for charities and other taxexempt organizations reported in this article are based on data compiled from Form 990, *Return of Organization Exempt from Income Tax*, and Form 990-EZ, the short-form version of this information return. The latter form may be completed by smaller organizations, those with end-of-year assets of less than \$250,000 and gross receipts of \$25,000 to \$100,000. Only condensed income statements and balance sheets are required of filers of Form 990-EZ. Forms 990-EZ accounted for 24 percent of the returns filed by organizations exempt under Code sections 501(c)(3) through (9) for Reporting Year 1998.

Charitable Organizations Tax-Exempt Under Internal Revenue Code Section 501(c)(3)

In order to qualify for tax-exempt status, the purpose of the organization must be to serve the public good, as opposed to a private interest. Organizations that are exempt under Code section 501(c)(3) are those whose purposes are religious, charitable, scientific, literary, or educational. They may also foster national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety. The activities of nonprofit organizations are limited in that they must further one or more of the purposes for which they were granted taxexempt status. Examples of these "charitable" organizations include nonprofit hospitals, educational institutions, youth organizations, community fundraising campaigns, public charities, local housing organizations, historical societies, and environmental preservation groups. These organizations may not distribute net earnings to a private shareholder or individual. Participation by an exempt organization in activities that can influence legislation, or in a political campaign on behalf of, or in opposition to, any candidate, is also restricted. Generally, contributions to the organization are tax-deductible to the donor

Of the 607,906 active nonprofit charitable organizations recognized by the Internal Revenue Service (IRS) under Code section 501(c)(3), some 207,272 filed returns for accounting periods that began in 1998 [4]. Those not required to file included churches and certain other religious organizations, as well as organizations with annual gross receipts totaling less than \$25,000 [5]. Nonprofit private foundations tax-exempt under Code section 501(c)(3) are required to file separately, on Form 990-PF, *Return of Private Foundation* [6]. The number of

¹ The adjusted 1997 data exclude two very large organizations that filed returns for 1997, but not for 1998: The Teachers Insurance Annuity Association (TIAA) and the College Retirement Equities Fund (CREF) are pension organizations whose 1997 assets totalled \$214 billion. Their exempt status was revoked under the Taxpayer Relief Act of 1997.

¹ Includes "interest on savings and temporary cash investments," "dividends and interest from securities," and "other investment income" from Form 990 and "investment income (loss)" from Form 990-EZ.

returns filed by nonprofit charitable organizations for 1998 was 4 percent more than for 1997 [7]. Form 990-EZ returns represented 22 percent of total returns filed

Financial Characteristics of Nonprofit Charitable Organizations

Although 64 percent of the returns filed by section 501(c)(3) organizations were filed by organizations with assets of less than \$500,000, these organizations held only 1 percent of the total assets and reported only 4 percent of total revenue (Figure B). In comparison, larger organizations, those with assets of \$10 million or more, represented less than 6 percent of the returns filed, but accounted for 88 percent of the total asset holdings and 80 percent of the total revenue reported.

The assets of all nonprofit charitable organizations filing Forms 990 and 990-EZ for 1998 totalled \$1.4 trillion. "Cash, savings, and investments" was the primary component of assets for these organizations, accounting for 55 percent of the total. "Land, buildings, and equipment" owned by nonprofits (but not for investment purposes) represented 19 percent of total assets [8]. The total fund balance (also

called "net assets") of Form 990 and 990-EZ filers increased 10 percent to \$892.4 billion for 1998.

The nonprofit charitable organizations in this study reported total revenue of \$752.0 billion for 1998. "Program service revenue" was the major source of revenue for these organizations. This revenue is comprised of the fees collected by organizations in support of their tax-exempt purposes and includes such income as tuition and fees at educational institutions, hospital patient charges (including Medicare and Medicaid payments), admission fees collected by museums or community performing arts groups, YMCA/YWCA activity fees, and payments received for insurance and retirement coverage by selected pension and annuity funds. Overall, program service revenue totaled \$502.8 billion, a 3-percent increase from 1997. (With TIAA-CREF excluded from the 1997 data, program service revenue increased 7 percent.) Figure C illustrates the types of revenue reported by organizations of different sizes. The largest organizations, those with assets of \$10 million or more, received 72 percent of their total revenue from program service revenue, a larger percentage than that for organizations with lesser amounts of total assets.

NOTES: Data are from both Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than \$25,000, as well as most churches, and certain other types of religious organizations.

¹ Includes returns with zero assets or assets not reported.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than \$25,000, as well as most churches, and certain other types of religious organizations.

Total expenses, as reported on Forms 990 and 990-EZ, rose slightly to \$684.6 billion for 1998. "Salaries, other compensation, and employee benefits," the largest expense category for nonprofit charitable organizations, increased by 10 percent, to \$305.7 billion. "Grants and similar amounts paid" decreased by nearly half, from \$85.4 billion for 1997 to \$44.7 billion for 1998. Nearly all of this decrease can be attributed to TIAA-CREF, which reported a total \$46.7 billion in grants for 1997 but did not file for 1998.

On Form 990 (but not on Form 990-EZ), expenses for nonprofit charitable organizations are distributed among four areas: program services, fundraising, management and general, and payments to affiliates. Briefly, program service expenses are those associated with activities that further an organization's exempt purpose; fundraising expenses are those incurred in soliciting contributions, gifts, and grants; and management and general expenses include those administrative and overhead costs which are not specifically related to program services or fundraising activities. Within these three broad areas are specific categories such as salaries and wages,

grants and allocations, professional fees, and occupancy. The fourth area includes payments to organizations closely related to the reporting organizations, such as support and dues payments by local chapters to State and national agencies. Program service expenses accounted for the vast majority (85 percent) of total expenses reported by filers of Form 990; management and general expenses totaled 12 percent; and fundraising expenses and payments to affiliates, combined, accounted for less than 2 percent.

Nonprofit Charitable Organizations Classified by NTEE Codes

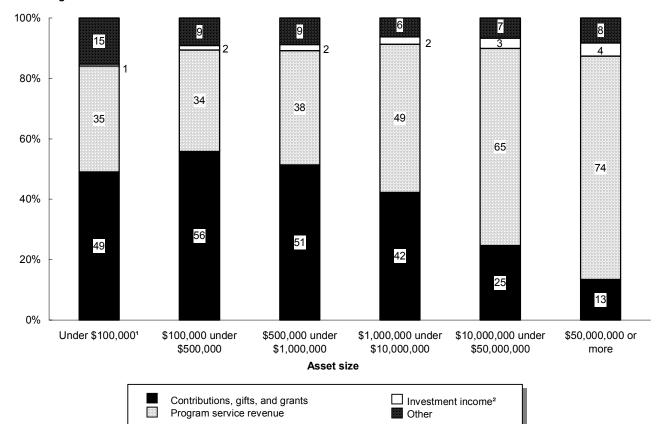

The National Taxonomy of Exempt Entities (NTEE) is a classification system developed by the National Center for Charitable Statistics, which classifies organizations by institutional purpose and major programs and activities [9]. It recognizes 26 major groups, which are aggregated into 10 program categories, as shown in Figure D. Within each program category is a wide diversity in types of organizations conducting the different functions. The organizations were coded for statistics on the basis of information provided on their Forms 990 and 990-EZ.

² Includes returns with no revenue or revenue not reported.

Figure C

Sources of Nonprofit Charitable Organization Revenue, by Asset Size, Reporting Year 1998

Percentage of total

¹ Includes returns with zero assets or assets not reported.

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than \$25,000, as well as most churches, and certain other types of religious organizations.

Based on the NTEE classification, health was the dominant program category in terms of revenue, accounting for 56 percent of the total. Organizations in the health category also held the largest portion of total assets (41 percent). This category includes organizations that promote the wellness of individuals, the general treatment and prevention of disease or illness (including also mental health and illness), and the medical rehabilitation of people with physical disabilities. Examples are hospitals; nursing or convalescent facilities; health support services, such as

blood banks, organ banks, and emergency medical transport services; health care financing activities; substance abuse treatment services; organizations that study ethics or promote the practice of ethical behavior in medical care and research; health associations active in the prevention or treatment of diseases; and medical research. Eighty-six percent of the total revenue for nonprofit charitable organizations in the health category was derived from program services.

The education program category includes higher

² Includes "interest on savings and temporary cash investments," "dividends and interest from securities," and "other investment income" from Form 990 and "investment income" from Form 990-EZ.

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system that uses 26 major field areas that are aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The codes describe the purposes and activities of the organizations.

education, elementary and secondary schools, correspondence schools, libraries, educational testing services, organizations providing opportunities for continuing education outside the framework of formal education, and student services and organizations. Education ranked a distant second in terms of revenue, which totaled \$150.0 billion. This category also accounted for \$441.5 billion in assets—nearly one-third of the total for nonprofit charitable organizations.

Thirty-eight percent of the organizations that filed Forms 990 and 990-EZ for 1998 were classified as human service organizations. Program service revenue (\$48.1 billion) and contributions, gifts, and grants received (\$43.0 billion) together represented nearly all of the total revenue reported by these organizations. This category was comprised of organizations in several classifications performing a broad range of services focused on specific needs within the community: housing and shelter programs, including housing, construction, management, and services to assist in locating, acquiring, or sustaining housing; job training and placement services; public safety, disaster preparedness, and relief services, including activities related to the effects of disasters and the provid-

ing of relief to accident victims; recreation and sports programs provided by organizations for camps, parks, and playgrounds, and amateur sports activities; crime prevention and legal services; and multipurpose organizations which provide a broad range of social or human services to individuals and families. (Included in this last category are such organizations as the American Red Cross, Salvation Army, Urban League, and YMCA's/YWCA's.)

The mutual, membership benefit category, which in the past was dominated by TIAA-CREF—the two organizations that accounted for 96 percent of the category's total assets in 1997—reported large decreases in assets, liabilities, revenue, and expenses for 1998.

Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4)-(9)

The statistics presented in this section are based on Forms 990 and 990-EZ filed by organizations tax-exempt under Code sections 501(c)(4) through (9) [10]. Figure E provides general descriptions of the organizations included under these sections. Unlike the nonprofit charitable organizations that are tax-

NOTES: Data are from Forms 990 and 990-EZ for nonprofit charitable organizations that are tax-exempt under Internal Revenue Code section 501(c)(3) and exclude private foundations, most organizations with receipts less than \$25,000, as well as most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding.

Figure E

Types of Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(3)-(9)

Internal Revenue Code section	Description of organization	General nature of activities
501(c)(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities, net earnings from which are devoted to charitable, educational, or recreational purposes
501(c)(5)	Labor, agriculture, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
501(c)(6)	Business leagues, chambers of commerce, and real estate boards	Improving conditions in one or more lines of business
501(c)(7)	Social and recreational clubs	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations	Lodges providing for payment of life, sickness, accident, or other benefits to members
501(c)(9)	Voluntary employee beneficiary associations	Providing for payment of life, sickness, accident, or other benefits to members

exempt under Code section 501(c)(3), most contributions to these organizations are not tax-deductible. Financial data for organizations covered by these six Code sections are presented in Tables 2, 3, and 4.

Highlights of Financial Data

Voluntary employee beneficiary associations, Code section 501(c)(9), reported \$109.7 billion in assets for

1998, considerably more than organizations exempt under sections 501(c)(4) through (8) (Figure F). This amount represented an increase of 16 percent from Reporting Year 1997. Fraternal beneficiary societies, section 501(c)(8), and civic leagues and social welfare associations, section 501(c)(4), reported \$65.2 billion and \$54.7 billion in assets, respectively, for 1998. With the exception of social and recre-

Figure F

Selected Items for Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4)-(9), Reporting Year 1998

[Money amounts are in millions of dollars]

Internal Revenue Code section	Number of returns	Total assets	Total liabilities	Total fund balance or net worth	Total revenue	Total expenses
	(1)	(2)	(3)	(4)	(5)	(6)
501(c)(4)	21,801	54,647	36,322	18,325	39,346	37,827
501(c)(5)	20,818	19,801	3,370	16,431	15,222	14,115
501(c)(6)	27,279	38,829	19,254	19,575	24,012	23,207

501(c)(8)	7,698	65,193	55,502	9,691	11,693	10,994
501(c)(9)	9,200	109,726	19,289	90,438	86,746	78,113

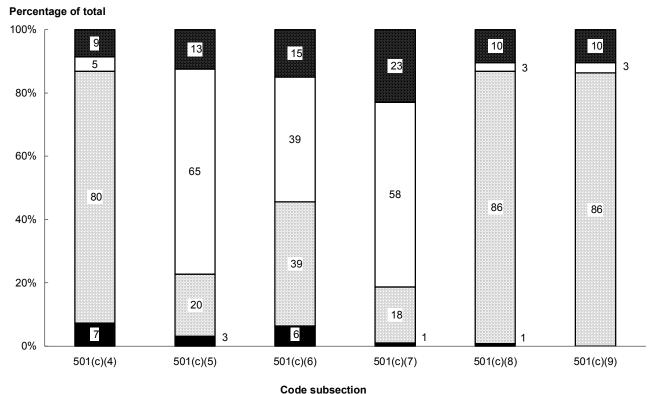

NOTE: Data are from Forms 990 and 990-EZ and exclude most organizations with receipts less than \$25,000.

ational clubs, section 501(c)(7), the majority of the asset holdings by organizations under these six Code sections was reported by the largest organizations (those with assets of \$10 million or more); for social and recreational clubs, however, the largest organizations reported just 29 percent of total assets. Social and recreational clubs differed from other types of organizations in the components of their assets as well. While organizations exempt under Code sections (c)(4), (5), (6), (8), and (9) held the majority of their assets in the form of cash, savings, and investments, social and recreational clubs reported 64 percent of their assets as land and buildings.

In terms of revenue, voluntary employee beneficiary associations, section 501(c)(9), were also the largest of the six categories, with \$86.7 billion, a slight increase from 1997. Civic leagues and social welfare organizations, section 501(c)(4), ranked a distant second in terms of revenue, with \$39.3 billion, an increase of 10 percent from the previous year. Program service revenue was the primary source of income for three types of organizations: civic leagues and social welfare organizations, section 501(c)(4); fraternal beneficiary societies, section 501(c)(8); and voluntary employee beneficiary associations, section 501(c)(9) (Figure G). These three types of organiza-

Sources of Revenue of Organizations Tax-Exempt Under Internal Revenue Code Sections 501(c)(4)-(9), Reporting Year, 1998

Contributions, gifts, and grants Program service revenue Other

NOTES: Data are from Forms 990 and 990-EZ and exclude most organizations with receipts less than \$25,000. Detail may not add to 100 percent because of rounding.

tions reported at least three-fourths of their revenue from program services. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); and social and recreational clubs, section 501(c)(7). Unlike nonprofit charities exempt under 501(c)(3), contributions, gifts, and grants were a minor source of income for those organizations taxexempt under sections 501(c)(4) through (9).

Organizations Filing Form 990-EZ

Form 990-EZ may be filed by organizations that are tax-exempt under Internal Revenue Code section 501(c), with annual gross receipts of less than \$100,000 and assets under \$250,000. The form was introduced for Reporting Year 1989, and its use has grown steadily each year. Form 990-EZ requires less detailed reporting than the long form, especially on the balance sheet portion of the return.

Table 4 presents detailed data on Form 990-EZ filers, by Internal Revenue Code section. With the exception of voluntary employee beneficiary associations, Forms 990-EZ represented between 22 percent and 36 percent of all information returns filed for 1998. (The short form accounted for only 4 percent of the total number of returns filed by organizations exempt under 501(c)(9).) Nonprofit charitable organizations reporting on Form 990-EZ accounted for very small proportions of total assets. Only labor, agricultural, and horticultural organizations, section 501(c)(5), and social and recreational clubs, section 501(c)(7), reported more than 2 percent of their total assets on Form 990-EZ. The assets of nonprofit charitable organizations that filed Form 990-EZ represented just one-tenth of one percent of the total assets of reporting organizations exempt under section 501(c)(3). (Data for organizations that were eligible to file Form 990-EZ but filed the longer Form 990 instead are included with the data for filers of Form 990.)

Summary

For 1998, nonprofit charitable organizations (excluding private foundations) tax-exempt under section 501(c)(3) reported \$1.4 trillion in total assets and \$752.0 billion in revenue. The number of returns filed by these organizations was 207,272, including both the longer Form 990 and the shorter Form 990-EZ. Two large organizations that were responsible for a

significant amount of nonprofit sector financial activity in 1997 did not file Form 990 returns for 1998.

Program service revenue, the fees received for the programs conducted in support of the purposes for which the tax exemptions under section 501(c)(3) were granted, was \$502.8 billion for Reporting Year 1998. It represented two-thirds of the total revenue reported by charitable organizations. Contributions, gifts, and grants increased by 11 percent to \$161.8 billion. This source of revenue accounted for over one-half of the total revenue of organizations with asset holdings of less than \$1 million, but for a much smaller share of the total revenue of the larger organizations. Expenses rose by 1 percent to \$684.6 billion.

Using the National Taxonomy of Exempt Entities codes (which classify organizations by institutional purpose and major programs and activities), health care was the predominant major category, accounting for 41 percent of the assets and 56 percent of total revenue reported by nonprofit charitable organizations.

Organizations exempt under Internal Revenue Code sections 501(c)(4) though (9) are diverse in both their purposes and financial characteristics. Voluntary employee beneficiary associations, section 501(c)(9), led these organizations in terms of both assets and revenue, with totals of \$109.7 billion and \$86.7 billion, respectively. Program service revenue was the principal source of revenue and consisted of payments for health and welfare benefits. Membership dues and assessments were the principal source of revenue for labor, agricultural, and horticultural organizations, section 501(c)(5); and social and recreational clubs, section 501(c)(7).

Data Sources and Limitations

The statistics in this article are based on a sample of the 1998 Forms 990, *Return of Organization Exempt From Income Tax*, and Forms 990-EZ, *Short Form Return of Organization Exempt From Income Tax*. Organizations used the 1998 forms when their accounting periods ended any time between December 31, 1998, and November 30, 1999. The sample did not include private foundations, which were required to file separate return forms. Most churches and certain other types of religious organizations were also excluded from the sample because they were not required to file a Form 990 or a Form 990-EZ. The sample included only those returns with receipts of more than \$25,000, the filing threshold.

The sample design was split into two parts: the first part was comprised of returns of organizations exempt under section 501(c)(3), and the second part contained organizations exempt under sections 501(c)(4) through (9). Returns of organizations tax-exempt under other Code sections were excluded. The data presented were obtained from returns as originally filed with the Internal Revenue Service. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. However, in most cases, changes made to the original return as a result of either administrative processing or taxpayer amendment were not incorporated into the data base.

Each part of the sample was classified into strata based on size of total assets, with each stratum sampled at a different rate. For section 501(c)(3) organizations, a sample of 14,653 returns was selected from a population of 211,305. Sampling rates ranged from 1.06 percent for organizations reporting total assets less than \$500,000 to 100 percent for organizations with total assets of \$30,000,000 or more. For organizations filing under sections 501(c)(4) through (9), a sample of 9,795 returns was selected from a population of 105,635. Sampling rates ranged from 2.10 percent for organizations reporting total assets less than \$125,000 to 100 percent for organizations with assets of \$10,000,000 or more. The filing populations for these organizations included some returns of terminated organizations, returns of inactive organizations, duplicate returns, and returns of organizations filed with tax periods prior to 1998. However, these returns were not included in the final sample, nor in the estimated population counts.

Because the data are based on samples, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure H shows CV's for selected financial data. A discussion of methods for evaluating the nonsampling error can be found in the general Appendix of this issue.

NOTE: Data are from Forms 990 and 990-EZ and exclude most organizations with receipts less than \$25,000.

- information are public documents, the names of individual organizations can be used in this article.
- [3] For more information on the requirements for tax-exemption under 501(c)(3) and other Code sections, see Internal Revenue Service Publication 557: *Tax-Exempt Status for Your Organization*.
- [4] Data presented in this article are from 1998
 Forms 990 and 990-EZ. The total number of
 nonprofit charitable organizations, including
 those not required to file Form 990 or Form 990EZ, was obtained from the Internal Revenue
 Service Exempt Organizations Business Master
 File (December 1998) and does not include
 private foundations filing Form 990-PF, Return
 of Private Foundation.
- [5] The \$25,000 filing threshold is an average of an organization's gross receipts over the previous 3 years.
- [6] For information on private foundations, see Whitten, Melissa, "Private Foundations and Charitable Trusts, 1997," *Statistics of Income Bulletin*, Fall 2000, Volume 20, Number 2.
- [7] For data on previous years, see Arnsberger Paul, "Nonprofit Charitable Organizations, 1997," *Statistics of Income Bulletin*, Fall 2000, Volume 20, Number 2; and Arnsberger Paul, "Nonprofit Charitable Organizations, 1996,"

- Statistics of Income Bulletin, Winter 1999-2000, Volume 19, Number 3.
- [8] The Form 990 includes a detailed balance sheet on which organizations classify their assets among a number of different components. The balance sheet on the shorter Form 990-EZ provides for only three types of assets: cash, savings, and investments; land and buildings; and other assets. For the sake of consistency, the assets of organizations filing the long form are collapsed into these three categories. Detailed balance sheet data for Form 990 filers are provided in Tables 1 and 3. Form 990-EZ data can be found in Table 4.
- [9] For information on the National Taxonomy of Exempt Entities classification system, see

- Hodgkinson, Virginia A.; Weitzman, Murray S.; et al., *Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector,* Jossey-Bass, Inc., 1996; Stevenson, David R.; Pollak, Thomas H.; Lampkin, Linda M.; et al., *State Nonprofit Almanac 1997: Profiles of Charitable Organizations,* The Urban Institute, 1997; and *The National Taxonomy of Exempt Entities Manual,* The Urban Institute, 1997.
- [10] Tax-exempt organizations are described under Sections 501(c)(1) through (21) of the Internal Revenue Code. The statistics in this article are based only on those tax-exempt under Sections 501(c)(3)-(9) because these organizations tend to constitute the bulk of the financial activity for the nonprofit sector.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Includes returns with zero assets or assets not reported.

² The differences between "total expenses" shown in this table and "total functional expenditures" shown in Table 2 are due to payments to affiliates, which are not considered functional expenditures.

NOTES: Data exclude private foundations, most organizations with receipts less than \$25,000, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTES: Organizations with end-of-year total assets under \$250,000 and gross receipts under \$100,000 could elect to file Forms 990-EZ rather than Forms 990. Data exclude most organizations with receipts less than \$25,000. Detail may not add to totals because of rounding.

¹ Excludes private foundations, most churches, and certain other types of religious organizations.

² Estimates in this column should be used with caution because of the small number of sample returns on which they are based.

Introduction

ach year, private foundations contribute billions of charitable dollars, primarily in the form of grants to charitable organizations, communities, or individuals. These outlays assist in the operation of programs supporting education, arts and humanities, health, human services, and environmental protection. Nonprofit organizations that conduct charitable programs in these areas often depend on foundation grants as a source of financial support.

Like charities that file Form 990, private foundations are tax-exempt under Internal Revenue Code section 501(c)(3). However, a private foundation, which is required annually to file the information return Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation), differs somewhat from a publicly-supported nonprofit organization, largely due to its narrow sphere of support and control. Usually organized as a corporation, association, or trust, a foundation is generally operated and supported by an individual, family, or corporation. Such organizations are classified as either "operating," referring to foundations that exercise a significant degree of oversight in the operation of their charitable activities, or "nonoperating," referring to foundations that, for the most part, provide financial support to other organizations, which in turn conduct charitable activities. Such support is usually provided in the form of grants to other exempt organizations.

Due to the centralization of support and control, foundations are subject to more stringent regulation than other section 501(c)(3) organizations. For example, foundations are generally required to pay an excise tax on their "net investment income" - income from such sources as interest, dividends, capital gain net income, and royalties. This tax, in most cases equal to 2 percent of an organization's net investment income, is approximated by IRS to cover expenses incurred in the oversight of foundation activities, as well as the enforcement of laws governing their exempt status. Secondly, those organizations defined as "nonoperating," which regularly represent more than 90 percent of private foundations filing Form 990-PF, are subject to an annual charitable payout requirement equal to 5 percent of their net investment assets.

Form 990-PF is also filed by section 4947(a)(1) nonexempt charitable trusts, organizations that re-

semble private foundations in that they operate exclusively for charitable purposes and are narrowly controlled and supported, usually by an individual or family. However, IRS does not formally recognize these organizations as tax-exempt and those portions of their income that are not distributed for charitable activities are reported on a separate tax form.

For 1997, domestic private foundations distributed \$16.4 billion in contributions, gifts, and grants, a 13-percent increase over the prior year, nearly keeping pace with a 15-percent increase in total revenue received. Additionally, foundations reported \$342.7 billion in fair market value of assets, the majority of which was composed of investments in securities. Section 4947(a)(1) charitable trusts represent about 5 percent of Forms 990-PF filed for 1997, and reported \$4.8 billion in fair market value of assets. These organizations reported an 11-percent reduction in charitable contributions paid, despite a nearly 28-percent increase in revenue to \$636.0 million.

Articles and tables included in this section provide extensive information on financial items as reported on Form 990-PF for Reporting Years 1991 through 1997. Aggregate data for all years prior to 1997 include foreign foundations and charitable trusts, except where noted. Foreign organizations receiving certain degrees of support from U.S. sources are required to file Form 990-PF, whether or not they choose to distribute grants within the U.S. Beginning with Tax Year 1997, published data are for domestic foundations only.

Recently, data were collected and published for a panel study of large private foundations. The panel included the largest 100 domestic, nonoperating foundations that appeared in the SOI sample for Reporting Years 1985-1997. Results from the panel study are also presented in this compendium.

Program Developments

Data for Reporting Years 1999 and 2000 are currently being edited, for the first time, in a Graphical User Interface (GUI) environment application. The "point-and-click" windows environment, in addition to providing a more navigable editing system for the study "editors," who enter return information and resolve taxpayer reporting and data inconsistencies, allows for various system enhancements to increase data quality, including improved methods of verifying year-to-year data at the time of editing.

Data Release

or 1991, private foundations and charitable trusts reported \$24.9 billion in total revenues and \$10.3 billion in contributions, gifts, and grants paid out, increases from 1990 of 26 percent and 14 percent, respectively. Private foundations are generally larger in terms of asset size and more numerous than charitable trusts. The 41,348 private foundations accounted for 98 percent of the combined total of \$192.6 billion in assets (based on fair market value) for foundations and charitable trusts, while the 2,662 charitable trusts accounted for the remainder.

A private foundation is a nonprofit, tax-exempt organization that is narrowly supported and controlled, usually by an individual, family, or corporation. A charitable trust filing under Internal Revenue Code section 4947(a)(1) is also nonprofit, but is not tax-exempt and is typically supported and controlled by an individual or family. Both private foundations and charitable trusts are required to file an annual information return, Form 990-PF, *Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation)*.

Private Foundations

Total private foundation revenues increased by over 26 percent from \$19.5 billion for 1990 to \$24.6 billion for 1991 [1]. The growth in revenues was largely due to net gains (less losses) from sales of assets, which increased to \$8.5 billion, more than double the amount reported for 1990. Other major sources of revenues -- receipts from contributions, gifts, and grants; and dividends and interest from securities -- each grew about 5 percent from 1990 levels to \$7.1 billion and \$6.7 billion, respectively. Charitable contributions, gifts, and grants paid increased by over 14 percent to \$10.1 billion (as reported on a cash basis in Table 1).

Total assets (based on fair market value) grew by 15 percent to \$189.6 billion for 1991 compared to 1990. The largest component of total assets, investments in securities, increased by more than 10 percent to \$139.4 billion. More than 65 percent of these investments were in corporate stock, which continued to dominate total investments in securities just as they had in previous years. The remaining 35 percent was in government obligations and corporate bonds. Investments in government obligations fell by more than 4 percent to \$31.1 billion, while corporate bond investments grew to \$17.4 billion, an increase of nearly 21 percent. (Table 1 also presents book values for these same asset accounts.)

This data release was written by Sarah E. Nutter, an economist with the Foreign Returns Analysis Section, under the direction of Michael Alexander, Chief, Foreign Special Projects Section.

Section 4947(a)(1) Charitable Trusts

Charitable trusts, as defined under Internal Revenue Code section 4947(a)(1), reported nearly \$3.0 billion in total assets for 1991, an increase of nearly 8 percent from 1990. Investments in securities, nearly 68 percent of total assets, grew slightly from \$1.9 billion to \$2.0 billion. This increase was due to a 17-percent growth in the fair market value of corporate stock, which increased to \$1.3 billion for 1991. The increase in corporate stock, which reflected both new acquisitions (reduced by dispositions) and net increases in the fair market value of previous acquisitions, was partially offset by decreases in the value of corporate bonds and government obligations, which fell slightly to \$0.3 billion and \$0.4 billion, respectively. Charitable contributions, gifts, and grants paid, grew by more than 4 percent to \$0.2 billion for 1991 (as reported on a cash basis in Table 2).

Total revenues grew somewhat for 1991, to \$280.4 million, a 4-percent increase from 1990. Like private foundations, the largest amount of growth was due to net gains (less losses) from sales of assets, which increased nearly 89 percent to \$73.7 million. Unlike private foundations, dividends and interest from securities were the primary source of revenues, nearly \$117.0 million for 1991. Receipts from contributions, gifts, and grants made up a relatively small portion of the revenues for charitable trusts, about 14 percent, for 1991.

Data Sources and Limitations

Tables 1 and 3 provide information for Reporting Year 1991 for private foundations, while Tables 2 and 4 provide similar data for charitable trusts. The statistics are based on a sample of Reporting Year 1991 Forms 990-PF that were filed with the Internal Revenue Service. The IRS required organizations with accounting periods beginning in 1991 (and therefore ending between December 1991 and November 1992) to file a 1991 Form 990-PF. Some part-year returns were included in the sample for organizations that changed their accounting periods, or filed initial or final returns. Approximately 61 percent of the foundations and 55 percent of charitable trusts had full-year accounting periods covering Calendar Year 1991 or part-year accounting periods that ended in December 1991. Additionally, 60 percent of total foundation assets and 57 percent of total trust assets were for the calendar-year accounting period. Therefore, the majority of the financial activity reflected in the statistics was associated with Calendar Year 1991.

The 1991 sample was stratified based on both the size of book value of total assets and the type of organization (either a private foundation or a charitable trust). Foundation returns were selected at rates that ranged from approximately 5 percent (for the more numerous but very

small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 29 to 100 percent. The 5,574 returns in the 1991 sample (4,699 foundations and 875 trusts) were drawn from the estimated population totals shown in Tables 1 through 4.

The population from which the 1991 sample was drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1991 and 1992. Some of the records designated were for organizations that were deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations whose returns for the 1991 Reporting Year were not yet filed or were otherwise unavailable for the statistics, data were estimated using other returns having similar characteristics. For the unavailable active trust returns, which were smaller in size than those for foundations, prior-year data were in most instances used as a substitute.

The data presented were obtained from returns as originally filed. The data were subjected to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Explanation of Selected Terms

Charitable Trust .-- This type of organization, also referred to as a "nonexempt" charitable trust, was defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the excise tax provisions for private foundations and are required to file a Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax [2].) Nonexempt charitable trusts must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Fiduciary Income Tax Return.

Distributable Amount.--This was the minimum payout amount that was required to be distributed by the end of the year following the year for which the return was filed in order to avoid an excise tax for failure to distribute income currently. The distributable amount was computed as 5 percent of "net investment assets," called the "minimum investment return," minus taxes on both "net investment

income" and "unrelated business income," plus or minus other adjustments, either allowed or required.

Excess Distributions Carryover.--The excess distributions carryover equaled the excess of "qualifying distributions" for 1991 over the "distributable amount." "Excess" amounts from the current year could be carried forward to be applied to the distributable amount for the following 5 years.

Minimum Investment Return.--This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire them and cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount."

Nonoperating Foundations (and Section 4947(a)(1) Charitable Trusts).--Nonoperating foundations and trusts generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to those (operating) foundations and trusts engaged in charitable activities, themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants to other organizations. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period.

Operating Foundations (and Section 4947(a)(1) Charitable Trusts).--These organizations generally expended their income for direct, active involvement in a taxexempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the private foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test." (The tests are described below with reference to private foundations but apply in the same manner to the charitable trusts.)

To meet the income test, a private foundation had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). The assets test was met if 65 percent or more of the foundation's assets were directly used for the active conduct of charitable activities. The endowment test was met if the foundation normally made distributions for the

active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." The support test was met if the foundation normally received substantially all of its support (other than from "gross investment income") from the public or from five or more qualifying exempt organizations, *and* (a) no more than 25 percent of its support (other than from "gross investment income") was normally received from any one such qualifying exempt organization; and (b) no more than half of its support was normally received from gross investment income.

Private Foundation .-- This type of organization is defined in Internal Revenue Code section 501(c)(3) as a nonprofit corporation, association, or trust with a narrow source of funds that operated or supported social, educational, scientific, charitable, religious, or other programs dedicated to improving the general welfare of society. A private foundation is: (1) not a church, school, hospital, or medical research organization; (2) not an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) not an organization that was operated by, or in connection with, any of the above described organizations; and (4) not an organization that conducted tests for public safety. The primary difference between a private foundation and a public charity was the sources of each type of organization's funding. A foundation usually receives its funds from an individual,

family, or corporation, while a public charity receives its funds primarily from a large number of sources within the general public.

Qualifying Distributions.--Qualifying distributions included disbursements for charitable purposes; amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation's or trust's obligation to pay out its "distributable amount."

Undistributed Income.--Undistributed income was the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carryover from prior years.

N/A - not applicable.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1991 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid in the income statement (Table 3) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

NOTE: Detail may not add to totals because of rounding.

Table 2.--All 4947(a)(1) Charitable Trusts Treated as Foundations: Number and Selected Financial Data, by Type of Charitable Trust and Size of Fair Market Value of Total Assets

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1991 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid in the income statement (Table 4) because foundations may use either the cash receipts and disbursements or the accrual method of accounting. NOTE: Detail may not add to totals because of rounding.

Table 3.--All Private Foundations: Balance Sheets and Income Statements, by Size of Fair Market Value of Total Assets

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

Data Release

or 1992, private foundations and charitable trusts reported \$23.9 billion in total revenues and \$11.5 billion in contributions, gifts, and grants paid out. Private foundations are generally larger in terms of asset size and more numerous than charitable trusts. The 42,428 private foundations accounted for 98 percent of the combined total of \$195.3 billion in assets (based on fair market value), while the 2,932 charitable trusts accounted for the remaining 2 percent.

A private foundation is a nonprofit, tax-exempt charitable organization that is narrowly supported and controlled, usually by an individual, family, or corporation. A charitable trust filing under Internal Revenue Code section 4947(a)(1) is also nonprofit, but is not tax-exempt and is typically supported and controlled by an individual or family. Both private foundations and charitable trusts are required to file and make public an annual information return, Form 990-PF, *Return of Private Foundation* (or *Section 4947(a)(1) Charitable Trust Treated as a Private Foundation*). The statistics contained in this data release are based on the data from these forms.

Private Foundations

Total private foundation revenues fell by 4 percent from \$24.8 billion for 1991 to \$23.6 billion for 1992 [1]. This decrease was largely due to one organization's sale of some of its assets in 1991 [2]. If this organization was excluded, total revenue for 1991 and 1992 would equal \$20.6 billion and \$23.0 billion, respectively. This would have represented a nearly 12-percent increase, instead of the actual 4-percent drop, from 1991 to 1992.

Because of the effect of this one organization's activities, one of the major sources of foundation revenue -- net gains (less losses) from sales of assets -- dropped 21 percent, from \$8.5 billion to \$6.7 billion. By excluding this organization from the data for 1991 and 1992, net gains (less losses) from sales of assets would have increased by 36 percent from \$4.8 billion to \$6.5 billion. This same foundation also accounted for net gains (less losses) from sales of assets more than doubling from 1990 to 1991 [3].

Total assets (based on fair market value) grew by 1 percent to \$192.2 billion for 1992 compared to the previous year. The largest component of total assets, investments in securities, increased by nearly 4 percent to \$144.4 billion. Nearly 66 percent of these investments were in corporate stock, which continued to dominate total investments in securities. The remaining 34 percent of invest-

This data release was written by Paul Arnsberger and Susan Eastep, economists with the Special Projects Section, Special Studies and Publications Branch, under the direction of Michael Alexander.

ments in securities was in Government obligations and corporate bonds. Investments in Government obligations, alone, fell by 2 percent to \$30.5 billion for 1992, while investments in corporate bonds increased by 7 percent to \$18.7 billion. (Tables 1 and 3 present both fair market and book values for these asset accounts.)

Section 4947(a)(1) Charitable Trusts

Charitable trusts, as defined under Internal Revenue Code section 4947(a)(1), reported slightly more than \$3.1 billion in total assets (fair market value) for 1992, an increase of 5 percent from 1991. Investments in securities, nearly 70 percent of total assets, grew from \$2.0 billion to \$2.2 billion. This increase was due to a 7-percent growth in corporate stock (fair market value), which increased to \$1.4 billion. Charitable contributions, gifts, and grants paid, fell by 2 percent to \$155 million (as reported on a cash basis in Table 2).

Total revenues grew significantly for 1992, to \$346.8 million, nearly 24 percent. The largest increase was for net gains (less losses) from sales of assets, up by over 70 percent, to \$126.1 million. Unlike private foundations, net gains (less losses) from sales of assets was the primary source of revenue for charitable trusts. Dividends and interest from securities accounted for \$120.1 million of revenues for 1992, followed by contributions, gifts, and grants of \$63.3 million (an increase of over 60 percent from the previous year).

Data Sources and Limitations

Tables 1 and 3 provide information for Reporting Year 1992 for private foundations, while Tables 2 and 4 provide similar data for charitable trusts. The statistics are based on a sample of Reporting Year 1992 Forms 990-PF that were filed with the Internal Revenue Service (IRS). These returns were filed by organizations with accounting periods beginning in 1992 (and therefore ending between December 1992 and November 1993). Some part-year returns were included in the sample for organizations that changed their accounting periods, or filed initial or final returns. Approximately 62 percent of the foundations and 57 percent of charitable trusts had full-year accounting periods covering Calendar Year 1992, or part-year accounting periods that ended in December 1992. Additionally, 60 percent of total foundation assets and 55 percent of total trust assets were for the calendar-year accounting period. Therefore, the majority of the financial activities reflected in the statistics can be associated with Calendar Year 1992.

The 1992 sample was stratified based on both the size of book value of total assets and the type of organization (either a private foundation or a charitable trust). Foundation returns were selected at rates that ranged from

approximately 5 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 31 to 100 percent. The 5,761 returns in the 1992 sample (4,929 foundations and 832 trusts) were drawn from the estimated population totals shown in Tables 1 through 4. The magnitude of sampling error, measured by the coefficient of variation, for selected financial data is shown in Figure A.

The population from which this sample was drawn consisted of 1992 Form 990-PF records posted to the IRS

Figure A

Coefficients of Variation for Selected Items, by Type of Organization, Reporting Year 1992

ltem	Private foundations	Charitable trusts
Total assets (fair market value)	0.39	0.57
Total revenue	1.87	1.24
Total expenses	2.06	2.06
Contributions, gifts, and grants paid	2.25	2.61

Business Master File during 1992 and 1993. Some of the records designated were for organizations deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations and trusts whose returns for the 1992 Reporting Year were not yet filed or were otherwise unavailable for the statistics, data were estimated using prior-year returns.

The data presented were obtained from returns as originally filed. The data were subjected to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Explanation of Selected Terms

Charitable Trust -- This type of organization, also referred to as a "nonexempt" charitable trust, is defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the same excise tax provisions that apply to private foundations and are

required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, *Return of Organization Exempt From Income Tax*, and are, therefore, not included in the statistics [4].) Nonexempt charitable trusts must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, *U.S. Income Tax Return for Estates and Trusts*.

Distributable Amount -- This was the minimum payout amount that was required to be distributed by the end of the year following the year for which the return was filed. Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of "net investment assets," called the "minimum investment return," minus taxes on both "net investment income" and "unrelated business income," plus or minus other adjustments, either allowed or required.

Excess Distributions Carryover -- The excess carryover equaled the excess of "qualifying distributions" for 1992 over the "distributable amount." "Excess" amounts from the current year could be carried forward to be applied to the distributable amount for the following 5 years.

Minimum Investment Return -- This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire them and cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount."

Nonoperating Foundations (and Section 4947(a)(1) Charitable Trusts) -- Nonoperating foundations and trusts generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to those (operating) foundations and trusts which engaged in charitable activities, themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants to other organizations. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period.

Operating Foundations (and Section 4947(a)(1) Charitable Trusts) -- These organizations generally expended their income for direct, active involvement in a tax-exempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to

their nonoperating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the private foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test." (The tests are described below with reference to private foundations, but apply in the same manner to charitable trusts.)

To meet the income test, a private foundation had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). The assets test was met if 65 percent or more of the foundation's assets were directly used for the active conduct of charitable activities. The endowment test was met if the foundation normally made distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." The support test was met if the foundation normally received substantially all of its support (other than from "gross investment income") from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from "gross investment income") was normally received from any one such qualifying exempt organization; and (b) no more than 50 percent of its support was normally received from gross investment income.

Private Foundation -- This type of organization is defined in Internal Revenue Code section 501(c)(3) as a nonprofit corporation, association, or trust with a narrow source of funds that operated or supported social, educational, scientific, charitable, religious, or other programs dedicated to improving the general welfare of society. A private foundation is not: (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that was operated by, or in connection with, any of the above described organizations; and (4) an organization that conducts tests for public safety. The primary difference between a private foundation and a public charity is the sources of each type of organization's funding. A founda-

tion usually receives its funds from an individual, a family, or a corporation, while a public charity receives its funds primarily from a large number of sources within the general public.

Qualifying Distributions -- Qualifying distributions include disbursements for charitable purposes; amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation's or trust's obligation to pay out its "distributable amount."

Undistributed Income -- Undistributed income was the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years.

Notes and References

N/A - not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1992 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

² Less than \$500.

N/A - not applicable.

NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1992 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipts and disbursements method of accounting.

NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500.

² The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipts and disbursements method of accounting.

NOTE: Detail may not add to totals because of rounding.

by Alicia Meckstroth and Paul Arnsberger

Private foundations, over 42,400 for 1992, contribute billions of dollars each year to charities and communities to support causes in such areas as education, health, human services, community development, the arts and humanities, and the environment. Private foundations represent over one-quarter of all Internal Revenue Code section 501(c)(3) nonprofit charitable organizations that file information returns with the Internal Revenue Service. For 1992, foundations made contributions, gifts, and grants totaling over \$10.9 billion [1]. This represents a two-year current-dollar increase of 23 percent over the contributions, gifts, and grants given for 1990. During the two-year period the number of foundations increased by 6 percent.

Foundations rely largely on asset growth, earned income on investments, and contributions received to support their charitable giving. In terms of gains in assets and revenues, foundations experienced a relatively strong twoyear period from 1990 to 1992, with the vast majority of the gains realized over the 1990 to 1991 period. Total foundation assets grew by 17 percent over the two-year period, to \$192.2 billion. Investment assets of \$181.2 billion represented the majority of foundation assets. Gains of 20 percent in the value of investments in corporate stock and 30 percent in the value of corporate bonds largely explain the 17 percent two-year increase. Total foundation revenue increased by 21 percent from 1990 to 1992, to \$23.6 billion, despite a decrease of 4 percent from 1991 to 1992. A significant increase of 70 percent in net gains from sales of assets and a smaller increase of 16 percent in the amount of contributions received by foundations, helps to explain the increased revenues. Additionally, the decrease in foundation revenues from 1991 to 1992 and the only minimal growth in assets from 1991 to 1992 was largely due to one organization's sale of some of its assets in 1991 [2]. Figure A shows the total amount and percentage changes for various private foundation revenue, asset, and expense items for the period 1990 to 1992 [3,4].

For 1992, over 2,900 nonexempt charitable trusts described in Internal Revenue Code section 4947(a)(1) held \$3.1 billion in total assets, realized \$346.8 million in total revenues, and distributed \$154.6 million in contributions, gifts, and grants. The amount of grants given by these charitable trusts increased by only 2 percent from 1990 to 1992 despite a 29 percent increase in revenues and a 13 percent increase in assets during this same period. These

Alicia Meckstroth is a private consultant and Paul Arnsberger is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief trusts are discussed in detail beginning with the section, Section 4947(a)(1) Nonexempt Charitable Trusts.

Statistics of Income Studies

The statistics presented in this article on both private foundations and charitable trusts are based on sample data from Form 990-PF, *Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation)*, the annual information return filed by these organizations [5]. The 1992 Reporting Year represents the fourth consecutive year that Statistics of Income has collected data on the 4947(a)(1) charitable trusts that are treated as private foundations. Statistical studies on private foundations have previously been conducted for Reporting Years 1974, 1979, 1982, 1983, and 1985 through 1991 [6].

Private foundations and charitable trusts are treated separately in both the statistical and descriptive analyses. In the analyses that follow a number of key topic areas on foundations are discussed, including:

- Overview of revenue, assets, and grants paid
- Organizational definition and legislative background
- Top ten domestic foundations
- Sources of foundation revenue
- Excise tax on investment income
- Foundation assets and investments
- Investment behavior by size of foundation
- Income yields and rates of total return
- Charitable distribution (or payout) requirement
- Charitable grants and other qualifying distributions
- Payout rates
- Asset growth and distribution goals

Following these is a similar, but shorter, discussion of charitable trusts and a summary of both types of organizations. The report ends with a discussion of the data sources and limitations and an explanation of key terms.

Private Foundations

Overview of Revenue, Assets, and Grants Paid

During the decade from 1982 to 1992, foundation assets and charitable grants paid increased steadily each year with overall real growth of 112 percent and 71 percent, respectively. Foundation revenue grew by 79 percent from 1982 to

Figure A

Dividends and interest from securities	6.4	6.7	6.6	3.1
Total expenses	11.7	13.2	14.5	23.9
Contributions, gifts, and grants paid	8.9	10.1	10.9	22.5
Excess of revenue (less loss) over expenses	7.8	11.4	9.1	16.7

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments" includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

1992, with steady annual increases from 1982 to 1986 and fluctuating year-to-year changes from 1986 to 1992. Substantial real increases in contributions received and net gains from sales of assets from 1982 to 1992, 104 percent and 162 percent, respectively, help to explain the overall increases in revenue. The overall growth in foundation assets and revenues markedly exceeds the 32 percent real growth of Gross Domestic Product from 1982 to 1992 [7]. The number of foundations increased by nearly 50 percent, from 28,468 in 1982 to 42,428 in 1992. Figure B graphically displays the growth in real assets, revenue, and grants from 1982 to 1992.

The asset growth of foundations during the 1982 to 1992 decade helped to increase total grants paid over the same period. The charitable payout requirement for certain types of foundations (explained in detail in the section Charitable Distribution (or Payout) Requirement) is based on the value of foundation investment assets; that is, as investment assets grow, so does the amount that foundations are required to distribute. Total investment assets, equal to \$181.2 billion for 1992, increased by 116 percent from 1982 to 1992. Investment assets for the "large" foundations, those holding \$50 million or more in fair market value of assets, grew in real terms by 163 percent over the decade, to \$121.8 billion. The real amount of charitable grants distributed by the large foundations grew by 165 percent over the same time period, to \$5.7 billion. The large foundations accounted for the majority of

foundation assets, 66 percent in 1992. The number of these large foundations increased from 165 in 1982 to 476 in 1992 as a few new large organizations were formed and as existing foundations increased past \$50 million in assets size.

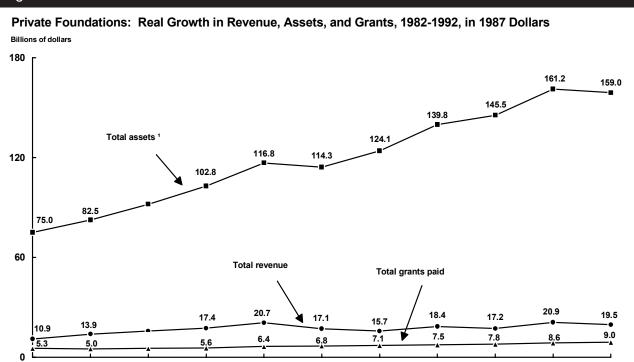

Comparisons of the different size classes of foundations are discussed throughout this article. The following classifications apply throughout, unless otherwise indicated: the "smallest foundations" refers to the group holding less than \$100,000 in fair market value of total assets (excluding foundations that either do not report assets or that report assets equal to zero); "small foundations" refers to the group holding less than \$1 million in assets (excluding foundations that either do not report assets or that report assets equal to zero); "medium-size foundations" refers to the group holding from \$1 million to less than \$50 million in assets; "large foundations" refers to the group holding \$50 million or more in assets; and, the "largest foundations" refers to the group holding \$100 million or more in assets.

Organizational Definition and Legislative Background

A private foundation is a nonprofit, tax-exempt corporation, association, or trust which is narrowly supported and controlled, usually by an individual, family, or corporation. It is this narrow base of support and control which

Figure B

1982

1987

Tax Year

1988

NOTE: Data for 1984 are not available.

1983

¹ Fair market value

differentiates a private foundation from a publicly supported tax-exempt charitable organization, although both receive tax exemption under section 501(c)(3) [8]. The other 501(c)(3) organizations, those filing the Form 990, Return of Organization Exempt From Income Tax, generally receive broad support from a large number of sources within the general public. Because of their centralized support and control, private foundations are more strictly regulated than the other section 501(c)(3) organizations. Private foundations held less than 16 percent of the book value of total assets and earned less than 5 percent of the total revenue of all section 501(c)(3) nonprofit charitable organizations that filed information returns for 1992 with the Internal Revenue Service [9].

1985

1986

The nonexempt charitable trusts included in this article are described in section 4947(a)(1). Charitable trusts represented only 6 percent of the total number of Form 990-PF filers for 1992. Unless otherwise noted, the same background information and requirements apply to both types of Form 990-PF filers [10]. A detailed discussion and analyses of the characteristics and behavior of the charitable trusts can be found beginning with the section, Section 4947(a)(1) Nonexempt Charitable Trusts.

The two types of private foundations or trusts, "operat-

ing" and "nonoperating," are distinguished by the type of charitable support they provide. Nonoperating foundations generally provide indirect charitable support by making grants to other nonprofit organizations that conduct charitable programs of their own [11]. Nonoperating foundations are annually required to distribute (typically through grants or related expenses) a minimum amount for charitable purposes, the "distributable amount." If they do not distribute the required amount in the current year, they have until the end of the following year to fulfill the charitable distribution requirement without penalty. The minimum required amount is based on 5 percent of the value of their "noncharitable-use (or net investment) assets" [12].

1990

1991

1992

1989

If an organization is sufficiently involved in the direct operation of its charitable activities, then it can qualify as an operating foundation and is exempted from the charitable distribution requirement that applies to nonoperating foundations. Although operating foundations are not subject to the annual distribution requirement, many choose to make grants in addition to carrying on charitable programs of their own. For a further explanation of the requirements of operating foundations, see operating foundations and section 4947(a)(1) charitable trusts in the Explanation of Selected Terms section.

Individual income tax deductions for contributions to nonoperating foundations are generally more restrictive than deductions for contributions made to operating foundations or other section 501(c)(3) organizations. Contributions that either establish or support a nonoperating foundation qualify for a Federal tax deduction of up to 30 percent of the donor's "adjusted gross income" (AGI). This compares to a deduction limit of 50-percent of AGI for donations to operating foundations and to other 501(c)(3) nonprofit charitable organizations (Form 990 filers).

Passage of the Tax Reform Act of 1969 (TRA69) subjected foundations to an excise tax on "net investment income" for the first time. While most foundations pay the excise tax, some operating foundations are exempt from the tax. For a further explanation of exempt operating foundations refer to operating foundations in the Explanation of Selected Terms section. TRA69 also imposed a series of excise taxes on foundations that engaged in "prohibited activities," which were deemed not to be in the public interest. These activities applied to any foundation that attempted to influence legislation by contacting legislators, encouraged the public to contact legislators, or participated in the campaign of a candidate for public office; any foundation that engaged in certain financial transactions (or acts of "self-dealing") with "disqualified persons" having a relationship with the foundation, such as substantial donors or officers, directors, or trustees of the foundation; any foundation which owned holdings in a business enterprise deemed to be excessive or which made investments deemed to jeopardize the charitable purpose of the foundation; and any nonoperating foundation that failed to distribute the required minimum payout after a 1-year grace period. Taxes on these prohibited activities are reported on Form 4720, Return of Certain Excise Taxes on Charities and Other Persons Under Chapters 41 and 42 of the Internal Revenue Code, and are not included in this article.

Of the estimated 42,400 private foundations filing Form 990-PF information returns for 1992, 91 percent were non-operating foundations and the remaining 9 percent were operating foundations, virtually the same percentages as prior years. Nearly 35,200 foundations, or 83 percent of all foundations, made grants for 1992. Nearly 87 percent of the nonoperating foundations and 47 percent of the operating foundations made grants. (Unless otherwise noted, data are for 1992.) [13] Of the non-grantmaking foundations, 28 percent were operating foundations that had no "distributable amount" and, therefore, were not required to make a minimum distribution (see the Explanation of Selected Terms section for a definition of the required distributable

amount); 29 percent were nonoperating foundations that made other types of disbursements in order to satisfy the charitable distribution requirement; and the remaining 26 percent were nonoperating foundations that did not fully make the required distribution for 1992 and legally had until the end of their 1993 accounting period to do so without tax penalty. The types of disbursements, other than grants, made by foundations to fulfill the charitable distribution requirement include the following: operating and administrative expenses used in the conduct of charitable programs or activities; amounts paid to acquire charitable-use assets; charitable "set-asides" for future time periods; and program-related investments. All of these expenditures counted towards a foundation's charitable distribution requirement. Some of the nongrantmaking foundations described above were "failed public charities" that had been reclassified by the Internal Revenue Service as nonoperating foundations. These organizations could no longer qualify for the favored public charity status of a Form 990 filer because they failed to maintain the required minimum support from public sources. Many, however, continued to operate direct charitable programs rather than make grants to other nonprofit organizations. Some of these organizations may have qualified as operating foundations, but did not request such status from the Internal Revenue Service.

Foreign foundations (those foundations organized abroad) comprise less than 0.1 percent of the foundation population. A foreign foundation was required to file Form 990-PF when it received a certain degree of support from either U.S. citizens or corporations. These foundations may or may not have chosen to distribute charitable grants within the United States. The IRS required that foreign foundations, like domestic foundations, pay an excise tax on investment income. While the excise tax equaled 2 percent of worldwide "net" investment income for the majority of domestic foundations, the tax on foreign foundations equaled 4 percent of their "gross" investment income derived from U.S. sources. The investment income on which these taxes are based does not include any income included in figuring the tax on unrelated business income, as reported on Form 990-T, Exempt Organization Business Income Tax Return.

TenLargestDomesticFoundations

Three-quarters of all foundations held less than \$1 million in total assets. The largest foundations, those holding \$100 million or more in total assets, comprised less than 1 percent of all foundations, but held 58 percent of total foundation assets, realized 46 percent of total revenue, and distributed nearly 44 percent of total grants for 1992. In

contrast, the small foundations, those holding less than \$1 million in assets, held only 3 percent of total assets, realized 7 percent of total revenue, and distributed 11 percent of total grants. These foundations accounted for 72 percent of all foundations.

The ten largest domestic foundations, displayed by asset size in Figure C, held over 18 percent of total foundation assets and distributed close to 12 percent of total foundation grants for 1992, \$35.3 billion and \$1.3 billion, respectively [14]. From 1990 to 1992 this represents only a 7 percent increase in assets of the largest ten foundations, but a 33 percent increase in grants. The increase in assets was much lower than the overall foundation asset increase of 17 percent for 1990 to 1992. However, the increase in top ten foundation grants was much higher than the increase of 23 percent in all foundation grants for 1990 to 1992. The huge Ford Foundation alone accounted for 3.6 percent of all foundation assets and 2.6 percent of all foundation grants for 1992. The ten largest foundations in terms of assets for 1992 are the same as for 1990, with the top three foundations assuming the same positions. While the Annenberg Foundation was the tenth largest foundation in terms of assets for 1992, its \$137 million of grants were third only to the Ford Foundation's \$282 million of grants and the combined W.K. Kellogg Foundations' \$227 million of grants.

The Robert Wood Johnson and Annenberg Foundations both realized gains in assets over the two-year period from 1990 to 1992 that were well above the overall 17 percent gain in all foundation assets, 28 percent and 27

percent, respectively. The Robert Wood Johnson Foundation realized all of its gains from 1990 to 1991 and actually realized a 9 percent loss from 1991 to 1992. The Annenberg Foundation, in contrast, realized comparable gains for both years. These two foundations also distributed grants over this same period at a rate well above the overall 23 percent increase in all foundation grants, 56 percent and 149 percent, respectively. A number of the ten largest foundations experienced overall losses in assets over the period from 1990 to 1992. The Lilly Endowment, MacArthur Foundation, and the combined W.K. Kellogg Foundations experienced two-year losses of 18 percent, 8 percent, and 7 percent, respectively. These three foundations realized all of their asset losses during the 1991 to 1992 period [15].

Sources of Foundation Revenue

Over the decade from 1982 to 1992, foundation revenues fluctuated from year to year, but realized an overall real increase of 79 percent. The two-year period from 1990 to 1992 was no exception, as foundation revenues increased in nominal terms a dramatic 26 percent from 1990 to 1991, only to decrease by 4 percent from 1991 to 1992, to \$23.6 billion. When the Wellcome Trust, a British foundation, is excluded from this calculation, revenues would have increased by 12 percent from 1991 to 1992. The overall revenue increase over the two-year period is largely explained by a huge increase in net gains from sales of assets from 1990 to 1991. Over the two-year period, total foundation net gains from sales of assets increased by 70

Figure C

¹ The J. Paul Getty Trust is an operating foundation. All other foundations listed are nonoperating foundations.

² The W.K. Kellogg Foundation Trust (classified as a private foundation and not as a section 4947(a)(1) charitable trust) is located in New York and has a "pass-through" relationship with the W.K. Kellogg Foundation, located in Michigan. Typically, the entire amount of the annual qualifying (charitable) distributions of the W.K. Kellogg Foundation Trust is made in the form of a grant to the W.K. Kellogg Foundation, which then redistributes the grant for charitable purposes (and does not count the redistribution as a qualifying distribution of its own). The combined total assets of the two organizations are shown in the "Total assets" column, but in order to avoid duplication, only the grants paid by the W.K. Kellogg Foundation are shown in the "Total grants paid" column.

³ Fair market value

percent, to \$6.7 billion for 1992. Overall gains of 116 percent were realized from 1990 to 1991, while an overall loss of 21 percent occurred from 1991 to 1992. This pattern can be largely explained by the Wellcome Trust's sale of some of its assets for 1991. The Wellcome Trust, alone, realized net gains from sales of assets of \$3.8 billion for 1991. These gains dropped to \$0.2 billion for 1992. Once again, by excluding the Wellcome Trust from the data for 1990 through 1992, net gains from sales of assets would have increased by only 21 percent from 1990 to 1991 and by 36 percent from 1991 to 1992.

The large foundations, which earn over half of foundation revenues, realized both the greatest gains and the greatest losses when compared to the smaller foundations. From 1990 to 1991, large foundation revenues increased by 45 percent, but from 1991 to 1992, their revenues declined by 12 percent. Excluding the Wellcome Trust from the calculations, large foundation revenues would have increased by 6 percent from 1991 to 1992 and by 16 percent the following year. In contrast, small foundation revenues increased by 25 percent for the 1990-1991 period, but then decreased by 9 percent for the next year. Medium-sized foundations achieved moderate increases of 4 percent and 10 percent for each of the time periods, 1990 to 1991 and 1991 to 1992, respectively. Figure D displays the sources of foundation revenue for 1992 for all foundations and for three different size groups: "small," "medium," and "large."

The year-to-year changes in revenue among the different size groups of foundations is better understood through an examination of the different sources of revenue upon which the different groups rely. The figure for total foundation revenue reveals that for 1992 over a third of total revenue came from contributions received by foundations; and well over a quarter each came from both net gains from sales of assets and dividends and interest from securities, 29 percent and 28 percent, respectively. Smaller amounts were earned from interest on savings and temporary cash investments and "other" sources. While the small foundations earned nearly three-quarters, or 72 percent, of their revenue from contributions, the large foundations earned only a fifth, or 21 percent, in this manner. Similarly, while the large foundations earned 71 percent of revenue from the combination of net gains from sales of assets and dividends and interest from securities, the small foundations earned only 19 percent of revenue from these two investment sources. As in past years, the data show that as the size of the foundation increases, the proportion of revenue from contributions declines and the proportion from investment income rises.

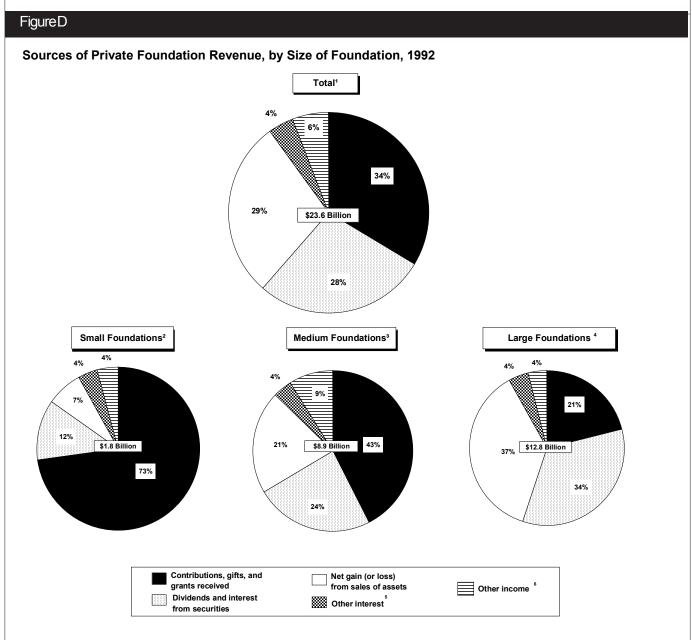

An examination of the actual number of small and large foundations receiving contributions and earning investment income shows that the large foundations may be a somewhat more homogeneous group relative to the small foundations. Of the large foundations, nearly all, or 98 percent, earned dividends and interest from securities for 1992; 94 percent realized net gains from sales of assets; and only 41 percent received contributions. In contrast, 57 percent of the small foundations earned dividends and interest from securities for that year; only 31 percent realized net gains from sales of assets; and fewer than half, or 47 percent, received contributions. These percentages were relatively comparable for 1991.

In terms of contributions received, small foundations received an amount for 1992, \$1.3 billion, that was 18 percent over the amount received for 1990. In contrast, the contributions given to medium-size foundations remained stagnant over the two-year period, at about \$3.8 billion. The large foundations, in contrast, realized notable increases in contributions received. From 1990 to 1992, these contributions increased by 49 percent, to \$2.7 billion. The large increase in net gains from sales of assets between 1990 and 1992 was widespread among foundations. Small foundation net gains from these sales increased 130 percent over the two years, to \$127.9 million. A similar pattern was true for the medium-size foundations, which realized increases in net gains of 139 percent, amounting to \$1.8 billion for 1992. Net gains from sales of assets also increased notably for the large foundations, to \$4.8 billion, a 53 percent increase over the same period.

In terms of dividends and interest from securities, overall foundation earnings increased by only 4 percent from 1990 to 1992. Small foundations realized 9 percent less dividends and interest from securities for 1992 as compared to 1990; medium foundations earned virtually the same amount from this type of revenue for 1992 as for 1990; and large foundations achieved a modest increase of 6 percent in dividends and interest from securities from 1990 to 1992.

Reporting Year 1992 represented only the fourth year for which information on the "unrelated business" activities of private foundations was available from the Form 990-PF. Only 3.1 percent of foundations reported a total of \$72.7 million in "unrelated business income" (UBI) for 1992. For 1991 these figures were 3.5 percent and \$65.5 million, respectively. For 1992, the amount of UBI represented only 0.5 percent of total revenue as reported on the "Analysis of Income-Producing Activities" schedule on the Form 990-PF. A tax was levied on the unrelated business income of foundations as it was reported on the Form 990-T, *Exempt Organization Business Income Tax Return* [16].

The section on the "Analysis of Income-Producing Activities" categorizes total foundation revenue (with the exception of contributions) as either "unrelated business income," "excluded income," or "related or exempt function

Includes foundations with assets unreported or equal to zero, which are not shown separately.
 Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets

income." Unrelated business income is that income from a trade or business that was regularly carried on by the organization and that was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). Excluded income represents income which was not directly related to

the tax-exempt, charitable function of the foundation and which was excluded or exempted from the tax on unrelated business income by Code sections 512, 513, or 514. Generally, dividends, interest, rental income, and gains from sales of investment assets were all considered excluded income. Related or exempt function income generally represents any income earned that is related to the

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets

⁴Large foundations are those holding \$50,000,000 or more in fair market value of total assets ⁵Represents "Interest on savings and temporary cash investments."

Fincludes "Gross rents and royalties" and "Gross profit (or loss) from business activities," as well as items such as imputed interest on deferred payments and program-related investment income. NOTE: Detail may not add to total because of rounding

organization's purpose or function constituting the basis for the organization's tax exemption.

The vast majority of revenue reported in the "Analysis of Income Producing Activities" section (which excludes contributions received) was reported as excluded income, 89 percent, with 11 percent reported as income which was (directly) related to the foundation's exempt, charitable purpose and only one-half of 1 percent reported as UBI [17]. In terms of the type of foundation, operating foundations tend to report a much higher proportion of income as exempt function income compared to nonoperating foundations, 33 percent compared to 8 percent, respectively. Both types of foundations report one-half of 1 percent or less as UBI. Small foundations tend to report a higher proportion of income as UBI and exempt function income, less than 2 percent and 29 percent, respectively, and a smaller percentage as excluded income, 69 percent. In contrast, the large foundations reported less than one-tenth of one percentage point as UBI, 6 percent as exempt function income, and 94 percent as excluded income.

Excise Taxon Investment Income

The excise tax on the investment income of private foundations was enacted as part of TRA69. Originally, it was levied in order to provide funds for Internal Revenue Service oversight of foundation activities and enforcement of laws governing their exempt status. Domestic foundations generally are liable for a tax equal to 2 percent of their net investment income and foreign foundations for an excise tax equal to 4 percent of their gross investment income. Domestic organizations compute the excise tax based on investment income from all sources, while foreign organizations compute the tax based on investment income from U.S. sources only. Some foreign foundations, classified as "exempt foreign foundations," are not subject to the charitable payout requirement, but still are required to pay the excise tax on investment income. These exempt foreign foundations are those that from the date of their creation have received at least 85 percent of their support from sources outside of the United States. Due to special treaty provisions with the United States, all Canadian foundations are exempted from the excise tax, regardless of whether or not they are considered "exempt foreign foundations." Additionally, domestic operating foundations, by meeting several requirements that show extensive public support and control, can be exempted from the excise tax on net investment income. Twenty-six percent of all operating foundations were exempted from the excise tax for 1992. For a complete discussion of the requirements for exempt operating foundations, see operating foundations in the Explanation of Selected Terms section.

One provision of the Deficit Reduction Act of 1984

allowed any domestic nonoperating foundation to reduce the annual 2 percent excise tax to 1 percent, if, simply stated, the foundation showed improvement in the rate at which it paid out charitable dollars. Specifically, if current "qualifying distributions" exceeded a 5-year average of qualifying distributions plus 1 percent of current net investment income, a foundation qualified for the reduced tax. Qualifying for the reduced tax was not affected by whether a foundation's charitable payout rate exceeded the required 5 percent; it was affected, however, by the level of increase in a foundation's payout rate.

Investment income, on which the excise tax is based, increased by 19 percent from 1990 to 1992, to \$14.3 billion. This rate of increase is comparable to the overall increase in foundation revenue. Small foundations, however, experienced declining investment income from 1990 to 1992, 6 percent, while both medium-size and large foundations realized increases of 24 percent and 19 percent, respectively. An increase of 19 percent in capital gain income explains much of the overall gain in investment income. (For a complete definition of net investment income and a further explanation of capital gain net income and how it differs from net gain (or loss) from sales of assets, see the appropriate entries in the Explanation of Selected Terms section.) For 1992, foundations reported excise tax on investment income of \$194.2 million. This amount was a 25 percent increase over that for 1990. Figure E displays selected statistics on the excise tax of foundations by size of foundation. Thirty-two percent of all foundations increased the rate at which they paid out charitable dollars for 1992, thereby qualifying for the reduced 1-percent excise tax. A greater percentage of the large foundations qualified for the reduced tax compared to the small foundations, 46 percent versus 29 percent.

Foundation Assets and Investments

Total foundation assets continued to grow steadily, to \$192.2 billion for 1992. This represents an overall increase of 17 percent from 1990 to 1992. Assets for each of the three size groups increased as well, the small foundations by 6 percent, and both the medium and large foundations by 17 percent. Excluding the Wellcome Trust, the assets of all foundations would have grown by 20 percent from 1990 to 1992. Investment assets of \$181.2 billion represent the vast majority of foundation assets, 94 percent. These investments increased by a two-year total of 16 percent. Investment assets include savings and temporary cash investments; U.S. and State Government obligations; corporate stock; corporate bonds; land, buildings, and equipment held for investment purposes; mortgage loans; and "other" investments. Non-investment assets include non-interest bearing cash; land, buildings, and equipment

used in the direct operation of a foundation's charitable activities; various receivables; inventories held for sale or use; prepaid expenses and deferred charges; and "other" assets, which include items such as escrow deposits, interest-free or low-interest loans made for charitable purposes, and program-related investments.

Holdings of investments in securities (including investments in U.S. and State Government obligations, corporate stocks, and corporate bonds), increased by over 14 percent from 1990 to 1992. These securities, valued at \$144.4 billion for 1992, represented 80 percent of total investment assets. Nearly two-thirds of all securities, or \$95.2 billion, were held in the form of corporate stock, with more than one-fifth and one-tenth of securities held in the form of U.S. and State Government obligations and corporate bonds, respectively. Reporting Year 1992 represents only the third consecutive year since 1979 for which the IRS required foundations to report separately the value of each of these types of securities on the Form 990-PF. Over the 1990 to 1992 period, foundations experienced considerable increases in investments in corporate stock, 20 percent, and investments in corporate bonds, 30 percent, and decreases in investments in government obligations, 6 percent. Foundations also experienced overall decreases in holdings of other types of investment assets, including savings and temporary cash investments and investments in land, buildings, and equipment, each of which declined by 8 percent from 1990 to 1992. While this same pattern was generally true for each of the three size groups of foundations, each group experienced increases and decreases of varying magnitudes [18].

As foundations grow in size they tend to engage in

more sophisticated investment practices and hold greater proportions of investment assets, particularly corporate stock. While the large foundations held 96 percent of all their assets as investments for 1992, the small foundations held 83 percent as investments. Figure F displays the composition of investment assets for small, medium, and large-sized foundations. While the large foundations held 80 percent of all investments as a combination of corporate stocks, corporate bonds, and government obligations, the small foundations held only 64 percent in this manner. Holdings of corporate stock, 53 percent of total investments, were the dominant investment for all foundation size groups, but particularly for the large foundations. While large foundations held 56 percent of investment assets as corporate stock, the small foundations held 38 percent in this manner. Small and medium-size foundations tend to hold somewhat more of their investments in U.S. and State Government obligations and corporate bonds compared to the larger foundations. As foundations grow in size, they also tend to hold a smaller percentage of their assets in the form of savings and temporary cash investments. For 1992, the small foundations held 25 percent of their investment assets as savings and temporary cash investments, compared to 9 percent for the medium size foundations and only 5 percent for the large foundations. Large foundations also tend to hold less non-interest bearing cash compared to the small foundations. For 1992, small foundations held 6 percent of total assets as noninterest bearing cash, compared to less than 1 percent for the large foundations. The distribution of assets by the different size groups may generally indicate that many of the small foundations have less of a preference for risky

² Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

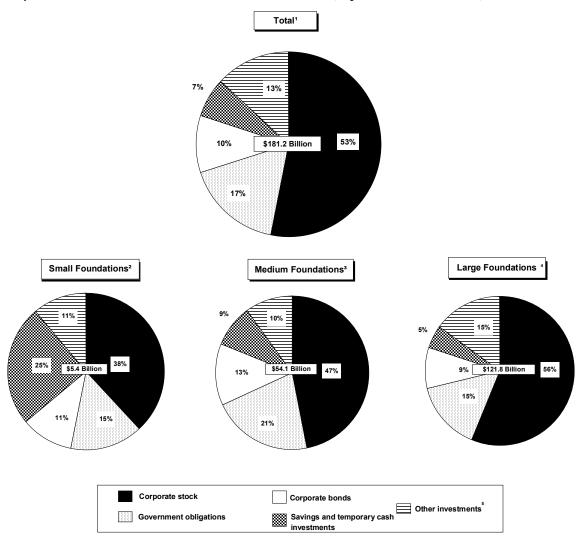

⁴ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁵ Includes \$170 million in gross investment income from 30 foreign foundations.

⁶ Less than 0.5 percent.

- ² Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.
- ⁹ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.
 ⁴ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

investments and more of a preference for asset liquidity compared to the large foundations. While holdings of cash for the small foundations remained relatively constant over the 1990 to 1992 period, the large foundation holdings of cash actually increased by over 300 percent from 1990 to 1992. This can be largely explained by the huge holdings of cash held by the Wellcome Trust for both 1991 and 1992.

Investment Behavior by Size of Foundation

In general, the larger the asset size of a foundation, the more it tends to emphasize the growth of its assets (or endowments) as a means by which to fund charitable giving, both now and in the future. Unlike other nonprofit charitable organizations, nonoperating foundations of all sizes most often distribute grants in order to fulfill their charitable purpose. Although foundations have relative

⁵ Sum of "Investmenst in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments' includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.
NOTE: Percentages may not add to 100% because of rounding.

freedom in the way that they choose to invest their taxexempt endowments, they are also subject to a minimum distribution or charitable payout requirement. Allowing for certain exceptions, nonoperating foundations must annually distribute for charitable purposes an amount that equals 5-percent of the average value of their net investment assets. (For an explanation and discussion of the payout requirement, see the sections beginning with The Charitable Distribution (or Payout) Requirement.) In order to fund charitable activity without reducing the value of their endowment, a foundation must earn an average "rate of total return on assets" (defined below) that equals at least 5 percent plus the costs of investment and the rate of inflation. To the extent that foundations wish to maintain or increase the value of their endowments to fund charitable giving into the future, this represents an important

Different sizes of foundations tend to have different charitable and investment objectives. For instance, larger foundations may tend to operate with more of a long-term focus. They may invest and manage their assets in order to maintain or increase the size of their endowments by earning income and realizing a return on assets which will allow them both to meet the annual 5-percent payout requirement and to use any remainder to increase their investment portfolio [19]. Many of the larger foundations pay out close to the required 5-percent of their net investment assets to charitable causes each year. The larger foundations hold a greater proportion of assets as investments in securities, including a greater proportion as corporate stock. Holdings of corporate stock tend to have greater risk but also higher returns compared to other investment holdings. Larger foundations may also tend to possess the resources necessary to use sophisticated investment management services. For these reasons, the larger foundations typically earn higher rates of total return on investments than do the smaller foundations.

Many of the smaller foundations do not possess the resources necessary to use sophisticated investment management techniques and may not have the same incentives to perpetuate their endowments. They tend to hold lower risk and lower-return assets than the larger foundations [20]. Moreover, they may operate with more of a short-term focus in order to distribute large contributions currently, so as to direct their resources to present concerns and immediate needs [21]. The smaller foundations rely much more on contributions as a source of revenue compared to other foundations. Given this, many may act as conduits or "pass-through" organizations, receiving contributions one year and then distributing them in the same year or the next. To note, the larger

foundations, which typically benefit from professional investment management services, realized the greatest rates of total return on their investments and "paid out" the smallest percentage of their assets as charitable distributions between 1990 to 1992.

Income Yields and Rates of Total Return

An income yield measures the realized investment income earned by a foundation on its investment assets. Figure G shows median "net investment income yields" for nonoperating foundations for 1988 through 1992. The median yield is calculated, rather than the mean, since it minimizes the influence of large outliers in the data, and therefore, may be a better representation of the typical foundation. The net investment income, or NII, yield was calculated by dividing net investment income by the end-of-year fair market value of investment assets [22]. Only nonoperating foundations were analyzed since only they are subject to the charitable payout requirement, discussed below. The use of only nonoperating foundations in the analysis here and in the sections that follow allows for comparisons of the NII yields, rates of total return, and payout rates, all discussed below.

During the period from 1988 to 1990 the median NII yields remained relatively constant between 7.1 and 7.7 percent. The total foundation NII yield declined from 7.1 percent for 1990 to 6.5 percent for 1991 and then to 5.6 percent for 1992. However, an examination of the yields for the different size groups reveals that the large foundations' median yield increased slightly during both 1991 and 1992. The largest foundations realized a median yield of 7.1 percent for 1992, up from 6.6 percent for 1990 and 6.8 percent for 1991. In contrast the median rate of the small foundations declined somewhat in both years. The smallest foundations realized an NII yield of 4.2 percent for 1992, down from a 6.4 percent yield for 1990. The large foundations typically earn somewhat higher NII yields than the smaller foundations. Since large foundations, compared to small foundations, rely more on investment income as a source of revenue and may use more sophisticated investment management techniques, it is not surprising that they typically realize higher NII yields.

The rate of total return, a measurement of the total capital appreciation of the endowment of a foundation, is a more comprehensive measure of investment performance than the NII yield. An examination of rates of total return on assets helps to show differences among the different sizes of nonoperating foundations. Figure H shows median rates of total return on nonoperating foundation assets for 1988 to 1992. A comparison with the charitable payout rates, discussed below, helps to further the understanding of the different sizes of foundations. Consis-

Figure G

tently strong rates of total return tend to lead to increased long-run giving power. The rate of total return formula used here measures the change in the value of the entire asset base with considerations for inflows and outflows of money [23]. The formula adjusts for inflation and measures the realized income from assets, investments and otherwise, as well as the unrealized appreciation or depreciation in the fair market value of assets.

Median foundation rates of total return on assets for 1991 and 1992 rebounded from the very low 1990 rates. For 1990, the total nonoperating foundation median rate was 2.4 percent. This increased to 6.7 percent for 1991, but fell

again to 3.6 percent for 1992. An examination of the different size groups shows a similar trend, but at a much different magnitude. Large foundations typically earn much higher rates of total return than do smaller foundations. Generally, as the holdings of investment assets increase, so do the total returns on assets. Median rates for the largest nonoperating foundations increased from a rate of only 1.3 percent for 1990 to 14.9 percent for 1991, the largest median rate of return realized by foundations in recent years. The year-to-year fluctuations in the returns of foundations, particularly the larger ones, tend to coincide with fluctuations in the stock market. The rate of total

return for these foundations then dropped to 6.2 percent for 1992. The median return of the smallest nonoperating foundations, in contrast, increased from 1.4 percent for 1990 to 2.5 percent for 1991, only to fall to 0.9 percent for 1992.

Charitable Distribution (or Payout) Requirement

The following discussion of the charitable distribution requirement and the payout rate excludes operating foundations since they are not subject to the distribution requirement. Therefore, all references to foundations in this section and in the sections that follow are to nonoperating foundations, unless otherwise indicated. For reasons of comparability, the operating foundations were also excluded from median net investment income yields and rates of total return, discussed previously.

The Federal Government first began to grant tax-exempt status to charitable foundations in the early 1900's. Legislative changes and discussions prior to 1969 focused on the regulation of foundation activities. However, beginning with TRA69, private nonoperating foundations were required to meet a charitable giving or "payout requirement." The 1969 legislation provided guidelines for foundation minimum giving levels. The original payout requirement, which was based on the greater of (adjusted) net income or a fixed percentage of net investment assets, was designed to prevent potential abusive foundation activity and ensure that a minimum amount was charitably distributed. Later, the Economic Recovery Tax Act of 1981 (ERTA) modified the payout requirement by basing the required amount only on net investment assets and not on income. Generally, the data indicate that, after ERTA, large foundations altered their giving patterns more noticeably than small foundations [24]. From 1982 to 1992 the large foundations realized the greatest percentage increase in both assets and distributions. The number of large foundations, not adjusting for those that moved to the large size group due to an inflationary increase in their assets, also increased at a much faster rate than the other size groups. (For a more detailed discussion, see the section, Asset Growth and Distribution Goals.)

Under the guidelines of ERTA, each year nonoperating foundations must calculate a "distributable amount," which is the minimum amount that the organizations must distribute for charitable purposes by the end of the next full reporting year in order to avoid a penalty tax on undistributed charitable dollars. The distributable amount, or required payout amount, equals 5 percent of the fair market value of net investment assets (the "minimum investment return"), plus or minus certain adjustments, either allowed or required [25]. See distributable (payout) amount, net investment assets, minimum investment return, and net

adjustments to distributable amount in the Explanation of Selected Terms section.

Charitable Grants and Other Qualifying Distributions

To fulfill the charitable payout requirement, nonoperating foundations can apply "qualifying distributions" from the current year, as well as any carryovers (distributions paid in excess of the minimum required amount) from the 5 previous years. The requirement can be met in either the current year or the following year. Qualifying distributions for 1992 for these nonoperating foundations are comprised primarily of contributions and grants, 88 percent; with smaller proportions for operating and administrative expenses, 8 percent; "set-asides" for future charitable distributions, 2 percent; program-related investments (e.g., loans made to public charities at below market or zero rates of interest), 1 percent; and amounts paid to acquire charitable-use assets (e.g., buildings, equipment, or supplies), less than 1 percent.

As mentioned previously, nonoperating foundations fulfill their exempt purpose in an indirect manner, primarily by making grants to other charitable organizations, while operating foundations generally expend their income for direct involvement in charitable activities and programs. Operating foundations are not subject to the same charitable payout requirement, but they must still expend a minimum amount each year on direct charitable support, usually through conducting their own charitable programs. These expenditures count as "qualifying distributions" in meeting the operating foundation requirements. For a discussion of the operating foundation requirements, see operating foundations and section 4947(a)(1) charitable trusts in the Explanation of Selected Terms section.

For 1992, nonoperating foundations paid out \$11.3 billion in qualifying distributions against a required payout (or distributable) amount of \$7.6 billion. As in years past, qualifying distributions increased at a relatively constant rate, 17 percent over the period from 1990-1992. The different size groups increased qualifying distributions at different rates between these years. The small foundations paid out 18 percent more qualifying distributions for 1992 than for 1990, while the medium foundations paid out 11 percent more and the large foundations, 22 percent more. When the Wellcome Trust's qualifying distributions are excluded, the large foundations qualifying distributions increased by 26 percent from 1990 to 1992. Foundation giving generally increases faster than the rate of inflation.

Over 79 percent of foundations with a charitable payout requirement either met or exceeded the required amount for 1992 in that same year. Those that did not had until the end of the following reporting year to fulfill the require-

ment. While 17 percent of the small foundations did not meet the 1992 requirement during 1992, thereby amassing "undistributed income," nearly 46 percent of the large foundations chose to wait until the following reporting year to distribute their required amount for 1992 [26]. Given that the annual payout amount is not calculated until the end of the reporting year and that it is based on the monthly average of investment assets, many foundations choose to take advantage of the 1-year tax- and penalty-free "grace period" for making required distributions. This lag time gives them an opportunity to consider their investment returns, payout rates, and contributions received, among other factors, when preparing their grantmaking budgets for the following year or years.

In contrast, while some foundations chose to wait until 1993 to disperse 1992 qualifying distributions, many gave in excess of the 1992 required amount during the 1992 Reporting Year. Small foundations typically distribute much more than their required amount. For 1992, the small foundations as a group distributed an amount of qualifying distributions that was over 325 percent more than their combined required distributable amount. In contrast, the large foundations for 1992 distributed an amount of qualifying distributions that was 18 percent more than their combined required distributable amount.

Contributions, gifts, and grants distributed by nonoperating foundations equaled \$10.7 billion for 1992. According to the Foundation Center's *Foundation Giving*, the largest proportions of total foundation grants for 1992 went to the areas of education, health, human services, and arts and culture [27]. The contributions and grants given by foundations accounted for less than one-tenth of

total philanthropic giving, with the vast majority of giving coming from individual gifts [28].

PayoutRates

Since the small foundations tend to distribute more charitable dollars relative to the required amount, they also tend to have higher charitable payout rates. Figure I displays median foundation payout rates by size of foundation for 1988 through 1992. To calculate the payout rate, the amount of (adjusted) qualifying distributions was divided by the amount of the monthly average of net investment assets [29]. The 1991 and 1992 median payout rates declined slightly over past years. Foundation payout rates are generally extremely steady, but from 1990 to 1992 they declined by half of a percentage point for the median foundation, from 7.0 percent for 1990 to 6.5 percent for 1992. The median payout rates for 1991 and 1992 for the smallest foundations, 12.0 percent and 11.7 percent, respectively, increased over the 1990 payout rate, 10.6 percent. In contrast, the median payout rate of the largest foundations remained very constant and equaled the required 5.0 percent for 1992. Overall, Figure I shows that foundation payout rates for all size groups remained relatively constant over the entire 5-year period.

The payout rates for the large and medium-sized foundations were very close to the required 5 percent. Those of the smaller foundations, which tend to emphasize current, rather than future, charitable giving, were much higher than the required rate. The smaller foundations seem to focus more on distributing charitable dollars currently, rather than on long-term endowment growth. The larger foundations, on the other hand, tend to reinvest a greater

Figure I

portion of their return on investments, perhaps to ensure endowment growth for future charitable giving. The trend of the large foundations to give consistently at a payout rate of 5.0 percent seems to demonstrate their use of long-range planning in setting grantmaking budgets. Salamon, in a survey of the payout policies of foundations, found that smaller foundations, as a group, tend to use their investment yields to help to structure their charitable payout rates, while the larger foundations, as a group, tend to structure their investment decisions in order to reduce the effect of the payout requirement on their assets [30].

Asset Growth and Distribution Goals

Over the decade from 1982 to 1992, total nonoperating foundation assets increased in real terms by 115 percent. This growth in nonoperating foundation assets is explained both by the growth in the value of assets and by the 52 percent increase in the number of foundations. The increasing assets helped to fund a real increase of 61 percent in the amount of qualifying charitable distributions made by foundations during that decade. The overall growth in foundation assets and charitable distributions exceeds the 32 percent real growth rate of the Gross Domestic Product from 1982 to 1992 [31].

The growing assets of foundations during the 1982 to 1992 decade helped to increase total grants over the same period. Foundation statistics suggest that a growing endowment may help to fund charitable giving at the same or at an increased amount in the future. During much of the 1980's and into the early 1990's, many foundations benefited from favorable stock market conditions that allowed them to realize rates of return and income yields high enough to easily meet the 5-percent charitable payout requirement. As foundation assets increased, so did the required distributable amounts, thereby leading to an increased amount of charitable distributions made by many foundations.

Large foundations historically have realized greater rates of total return on assets than have small foundations. The large foundations typically rely heavily on the growth of their endowments to fund charitable programs and, therefore, have distributed dollars at consistent rates and in such a way as to further long-run asset growth. From 1982 to 1992, the significant real asset growth of the large foundations allowed them to increase charitable distributions at a faster rate than either of the other size groups, despite paying out charitable dollars at rates hovering at the minimum 5.0 percent.

Figure J displays revenue, assets, and qualifying charitable distributions for the different size groups of foundations for the period 1982 to 1992. During that 10-year

period, the large foundations increased real assets by 164 percent, while increasing charitable distributions by 128 percent. In contrast, the small foundations, which typically pay out charitable dollars at more generous rates than the large foundations but realize lower rates of total return and income yields, increased real assets and distributions by 21 percent and less than one-half of 1 percent, respectively. It is important to note, however, that the number of large foundations increased at a rate nearly 5 times that of the small foundations during this decade. The number of large foundations increased by 290, or 196 percent, while the number of small foundations increased by over 8,000, or 41 percent.

¹ The total number of foundations includes 1,027 foundations for 1992 and 1,515 foundations for 1982 that had assets unreported or equal to zero. These foundations are not shown separately.

NOTE: Constant dollar amounts were calculated using the Gross Domestic Product (GDP) price deflator.

² Total assets represent "fair market value of total assets" from Form 990-PF.

³ Total charitable distributions represent "qualifying distributions" from Form 990-PF.

⁴ Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

 $^{^{6}}$ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁷ Less than 0.5 percent.

Section 4947(a)(1) Nonexempt Charitable Trusts

Overview of Revenue, Assets, and Grants Paid Charitable trusts described in Internal Revenue Code section 4947(a)(1) are organizations which have exclusively charitable interests but which are not exempt from federal income tax as Section 501(c)(3) organizations are. Charitable trusts that are not publicly supported are subject to the same requirements as foundations, including the excise tax provisions and the charitable payout requirement. Charitable trusts are typically supported and controlled by an individual or family and, like foundations, they file the Form 990-PF. The 4947(a)(1) charitable trusts that file the Form 990-PF, hereafter referred to as "charitable trusts" are unlike foundations in that they are not required to be formally recognized as tax-exempt organizations by IRS. Most were originally formed as 4947(a)(2) split-interest trusts that at one time had one or more noncharitable beneficiaries. Additionally, the 4947(a)(1) trusts must pay an annual tax on their income (usually from investments) that is not distributed for charitable purposes. Trusts must report such income and tax (under Subtitle A of the IRC) on Form 1041, U.S. Fiduciary Income Tax Return. Statistics for charitable trusts contained in this article are based on Forms 990-PF, but not on Forms 1041.

Two other types of section 4947(a)(1) charitable trusts file different returns with the Internal Revenue Service and are *not* covered in this article. First, certain charitable trusts, those that receive the majority of their support from public, rather than private, sources, file the Form 990. These trusts typically operate in connection with, and provide support to, one or more public charities. Second, split-interest trusts, which have both charitable and noncharitable beneficiaries, file the Form 5227, *Split-Interest Trust Information Return*.

Over 2,900 section 4947(a)(1) trusts filed Forms 990-PF for 1992. For this year, charitable trusts represented 2 percent or less of the total assets held, total revenue earned, and total grants distributed by all of the Form 990-PF filers. The number of Form 990-PF filers classified as trusts increased by 12 percent from 1990. Nearly 99 percent of these organizations were classified as nonoperating trusts. The vast majority of trusts, 92 percent, made charitable grants for 1992. This compares to 83 percent for private foundations. From 1990 to 1992, total trust revenues increased at a faster rate than the revenues of foundations, 29 percent (compared to 21 percent), from \$269.7 million to \$346.8 million. Large increases in both net gains from sales of assets, 219 percent, and contributions received, 63 percent, help explain the overall increase in revenues. Total trust assets, equal to \$3.1 billion for 1992,

also increased from 1990 to 1992, but a smaller percentage increase than the assets of foundations, 13 percent for trust assets compared to 17 percent for foundation assets. Increases of 25 percent in investments in corporate stock and 17 percent in investments in corporate bonds help explain the overall increase in trust assets. Despite large increases in both assets and revenues, the amount of grants distributed by trusts increased by only 2 percent between 1990 and 1992, to \$154.6 million. Figure K shows total amount and percentage changes for various charitable trust revenue, asset, and expense items for the period 1990 to 1992.

The following classifications apply, unless otherwise indicated, to the discussion of charitable trusts throughout the remainder of this article: "small charitable trusts" refers to the group holding less than \$1 million in assets (excluding trusts that either do not report assets or that report assets equal to zero); "medium-size charitable trusts" refers to the group holding from \$1 million to less than \$10 million in assets; and, "large charitable trusts" refers to the group holding \$10 million or more in assets. It should be noted that the medium and large-sized trusts are much smaller on average than the medium and large-sized foundations.

Sources of Charitable Trust Revenue

With large increases in net gains from sales of assets and in the amount of contributions received during the 1990 to 1992 period, the composition of trust revenue for 1992 changed somewhat from 1990. Trusts earn the majority of their revenue from net gain from the sales of assets, 36 percent, and dividends and interest from securities, 35 percent. A smaller proportion of total revenues, 18 percent, come from contributions received. Compared to foundations, which received over a third of their revenue from contributions, trusts relied much less on contributions as a source of revenue and much more on investment income. The overall trust revenue composition most resembles the large foundation revenue composition. Along with increases in overall revenue, charitable trust net investment income, on which the excise tax is based, increased by 27 percent from 1990 to 1992, to \$252.8 million, while the amount of excise tax reported increased by 36 percent, to \$4.3 million.

Less than 1 percent of charitable trusts reported "unrelated business income" for 1992, totalling only \$117,200, or less than one-tenth of one percentage point of the total revenue reported on the "Analysis of Income Producing Activities" schedule of the Form 990-PF. Like foundations, the majority of trust revenue reported on the aforementioned schedule was reported as excluded income, 87

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments" includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

percent, with the remaining amount reported as income that was (directly) related to the trust's charitable purpose, 13 percent [32]. Like the foundations, the operating trusts, compared to the nonoperating trusts, tend to report a much higher proportion of income on this schedule as exempt function income.

Charitable Trust Assets and Investments

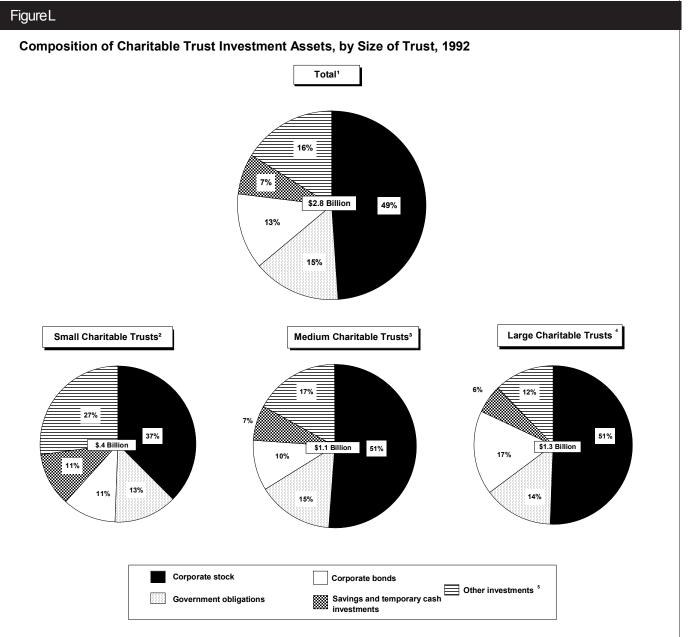

Like foundations, charitable trusts hold the majority of their assets as investments, 90 percent, which is somewhat less than the proportion of investment assets held by foundations. Over three-quarters of trust investment assets, or 77 percent, were held in the form of securities. The amount of investments in securities increased by 16 percent from 1990 to 1992, to \$2.2 billion. This increase was greater than the 13 percent overall increase in trust assets over this period. Figure L depicts the composition of investment assets for all trusts and for each of the different size groups. Investment assets include savings and temporary cash investments; government obligations; corporate stock; corporate bonds; land, buildings, and equipment; mortgage loans; and "other" investments. Over three-quarters of all trust investment assets were held as either government obligations, corporate stock, or corporate bonds. Compared to foundations, trusts held a somewhat smaller proportion of investment assets in corporate stock, 49 percent, and government obligations, 15 percent, and a somewhat larger proportion in corporate bonds, 13 percent. The remainder of investment assets was comprised of savings and short-term cash investments, 7

percent; and land, buildings, equipment, mortgage loans, and other investments, 16 percent. Like foundations, as trusts grow in size they tend to hold somewhat more of their investment portfolio as investments in securities, particularly corporate stock.

Charitable Trust Income Yields and Rates of Total Return

As in the case of foundations, the median net investment income (NII) yields and rates of total return on assets were calculated only for nonoperating trusts. Figure M displays the median NII yields for the different sizes of charitable trusts for 1989 through 1992. The trusts realized somewhat higher NII yields for 1991 and 1992 compared to foundations. For instance, for 1992 the median trust realized a 7.5 percent NII yield, while the median foundation realized only a 5.6 percent yield. For all of the years displayed in Figure M, the small trusts realized higher NII yields than either the medium or large-sized trusts. This trend is the opposite of that of foundations. Compared to foundations, there is little difference among the different trust size groups in terms of the extent to which they rely on investment income as a source of revenue.

Figure N displays the median rates of total return on assets for the different sizes of trusts for the years 1990 to 1992. For both 1991 and 1992, the median trust rate of total return exceeded the median foundation rate of total return, 10.5 percent to 6.7 percent for 1991 and 6.4 percent to 3.6 percent for 1992. In terms of both the NII yield and rate of

¹ Includes charitable trusts with assets unreported or equal to zero, which are not shown separately

total return data, it seems that the small trusts outperformed their small foundation counterparts. The large trusts, however, did not outperform foundations of the same size for either year. Unlike foundations, few notable differences existed among the different size groups of trusts.

Charitable Trust Distributions and Payout Rates

The section 4947(a)(1) charitable trusts distributed \$154.6 million as contributions, gifts, and grants paid for 1992, an increase of only 2 percent over 1990. The grants distrib-

² Small charitable trusts are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

Medium charitable trusts are those holding from \$1,000,000 to less than \$10,000,000 in fair market value of total assets.
Large charitable trusts are those holding \$10,000,000 or more in fair market value of total assets.

⁵ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments" includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

NOTE: Percentages may not add to 100% because of rounding.

\$10,000,000 or more	3.5	11.1	4.7

¹Excludes nonoperating trusts with assets unreported or equal to zero.

uted by the trusts represented 93 percent of the total amount of qualifying distributions. The nonoperating trusts paid out \$163.8 million in qualifying distributions or 21 percent more than the required distributable amount. As in the case of foundations, the discussion of the distribution requirement and payout rates excludes operating trusts because they are not subject to the same

payout requirements as nonoperating trusts.

The small trusts as a group distributed 28 percent more for charitable purposes than the required amount, while the medium trusts distributed 10 percent more than the required amount and the large foundations 27 percent more. Much less variation in the payout rate is evident among the different size groups of trusts, as compared with foundations. Approximately 72 percent of trusts either met or exceeded the required payout amount for 1992. This is somewhat less than the 79 percent of foundations that met or exceeded the required payout amount in that same year. The remaining 28 percent of trusts amassed undistributed income and had until the end of the following reporting year to fulfill the requirement.

Figure O presents median payout rates for charitable trusts for 1989 to 1992. The median payout rate for all trusts for 1992 was 5.0 percent, which was below the 6.5 percent median payout rate for foundations for that same year. While the smallest foundations paid out distributions at a rate of 11.7 percent for 1992, trusts of the same size paid out distributions at a rate of only 5.5 percent. The charitable trusts generally distributed charitable dollars at a lower rate than did foundations. Aside from the smallest trusts, those holding assets from \$1 to less

Summary

Private Foundations

Over 42,400 private foundations, representing over onequarter of all Internal Revenue Code 501(c)(3) nonprofit charitable organizations that filed information returns with the Internal Revenue Service, distributed over \$10.9 billion in charitable contributions and grants for 1992. Foundations increased the amount of contributions and grants given by 23 percent from 1990 to 1992. During this same time period, total foundation revenues and assets both realized relatively strong increases of 21 percent and 17 percent, respectively.

Total foundation revenue increased to \$23.6 billion from 1990 to 1992. All of the gain occurred from 1990 to 1991, as foundations actually realized a 4 percent loss in revenues from 1991 to 1992. A significant two-year increase of 70 percent in net gains from sales of assets and a smaller increase of 16 percent in the amount of contributions received by foundations, help to explain the increased total revenues from 1990 to 1992. Overall trends by size of foundation continue to show that as the size of a foundation increases, the proportion of revenue from contributions declines, while the proportion from net investment income rises.

Like total revenue, net investment income, on which the excise tax is based, increased by 19 percent from 1990 to 1992, to \$14.3 billion. Foundations reported a total of \$194.2 million for the excise tax paid on investment income, an increase of 25 percent compared to the tax paid for 1990.

Total foundation assets grew to \$192.2 billion for 1992, an increase of 17 percent from 1990. Nearly all of the gains were realized for the 1990 to 1991 period, as foundation assets only increased by 1 percent from 1991 to 1992. Foundations held the majority of their assets as investments, 94 percent, with investments in securities, alone, comprising 80 percent of total investment assets. Foundations held well over half of their investment assets, \$95.2 billion, as investments in corporate stock; followed by investments in Government obligations, 17 percent; and investments in corporate bonds, 10 percent. As the size of a foundation increased, the proportion of assets held as corporate stock tended to increase, while the proportion held as savings and temporary cash investments tended to decrease.

Along with the increases in assets, particularly from 1990 to 1991, foundations, especially the large foundations, realized very high rates of total return on assets for

1991. For this year, the median foundation achieved a return of 6.7 percent, while the largest foundations achieved a median return of 14.9 percent. For 1992, along with the small gains in total foundation assets, median foundation rates of total returns were more moderate. The median foundation achieved a return of 3.6 percent for 1992, while the largest foundations achieved a median return of 6.2 percent. The large foundations typically achieve higher rates of return than their small counterparts. As in past years, this was also true for both 1991 and 1992. For instance, for 1991, the smallest foundations realized a rate of total return of only 2.5 percent, compared to the 14.9 percent median return for the largest foundations. In terms of the income yield on net investment assets, or the "net investment income (NII) yield," the median foundation realized a slightly lower yield for both 1991 and 1992, 6.5 percent and 5.6 percent, respectively, compared to the 7.1 percent median yield for 1990.

Foundations typically rely largely on asset growth, earned income on investments, and contributions received to support their charitable giving. Charitable distributions continued to increase at a relatively consistent rate for 1991 and 1992 as foundations continued to make contributions to areas such as education, health, human services. community development, the arts and humanities, and the environment. In order to fulfill the charitable payout requirement, nonoperating foundations paid out \$11.3 billion in qualifying distributions against a required payout amount of \$7.6 billion. The amount of qualifying distributions made by the nonoperating foundations increased by 17 percent from 1990 to 1992. However, as a measure of rate of charitable giving, the median charitable payout rate decreased by half a percentage point from 1990 to 1992, from 7.0 percent to 6.5 percent. As in past years, the smaller foundations tended to pay out charitable dollars at higher rates than the larger foundations. The smallest foundations distributed charitable dollars at a median payout rate of 12.0 percent for 1991 and 11.7 percent for 1992. In contrast, the largest foundations distributed charitable dollars at a median payout rate of only 5.1 percent for 1991 and 5.0 percent for 1992. The rate of 5.0 percent was equal to the minimum required payout rate.

During the decade from 1982 to 1992, foundation assets and charitable grants increased in real terms by 112 percent and 71 percent, respectively. Real foundation revenue grew by 79 percent during the same decade, with steady annual increases from 1982 to 1986 and fluctuating year-to-year changes from 1986 to 1992. The overall growth in foundation assets and revenues markedly exceeds the 32 percent growth of the Gross Domestic Product from 1982 to 1992 [33].

Section 4947(a)(1) Charitable Trusts

Over 2,900 nonexempt charitable trusts defined under Internal Revenue Code 4947(a)(1) represented 6 percent of the total number of Form 990-PF filers for 1992, which includes both private foundations and 4947(a)(1) charitable trusts. Charitable trusts are subject to the same charitable distribution requirement as foundations and operate in a relatively similar manner. For 1992, these charitable trusts represented less than 2 percent of the total assets held, total revenue earned, and total grants distributed of all of the Form 990-PF filers. Charitable trusts distributed \$154.6 million in charitable contributions and grants for 1992, an increase of only 2 percent from 1990 to 1992. During this same period, trusts realized increases in both revenues and assets, 29 percent and 13 percent, respectively. Total trust revenues increased to \$346.8 million for 1992. Large increases in both net gains from sales of assets, 219 percent, and contributions received, 63 percent, help explain the overall increase in revenues. Compared to foundations, trusts relied much less on contributions as a source of revenue and, instead, relied more on investment income. In this respect, they behaved most like the large foundations.

Total charitable trust assets grew to \$3.1 billion for 1992, an increase of 13 percent over 1990. Two-year increases of 25 percent in investments in corporate stock and 17 percent in investments in corporate bonds help explain the overall increase in trust assets. Like foundations, trusts held the majority of their assets as investments, 90 percent, with investments in securities alone comprising 77 percent of total investment assets.

For both 1991 and 1992, the median trust rate of total return exceeded the median foundation rate of total return. For 1992, the median trust earned a total return on assets of 6.4 percent, and for 1991, 10.5 percent. The trusts realized somewhat higher NII yields for 1991 and 1992, compared to foundations. For 1992, the median trust realized a 7.5 percent NII yield and for 1991, 7.3 percent. For both years the small trusts realized higher NII yields than either the medium or large-sized trusts. Unlike foundations, there were few notable differences in NII yields and rates of total return on assets among the different size groups of trusts.

In terms of charitable giving, in order to fulfill the charitable payout requirement, the nonoperating trusts paid out \$163.8 million in total qualifying distributions against a required distributable amount of \$134.9 million. The amount of qualifying distributions made by the nonoperating trusts increased by less than 2 percent from 1990 to 1992. The median payout rate for all trusts was 5.0 percent for 1992, which was below the 6.5 percent median

payout rate for foundations. There was little variation in the rate at which trusts of different sizes paid out charitable dollars. For instance, for 1992, the smallest trusts paid out distributions at a rate of 5.5 percent, while the largest trusts paid out distributions at a rate equal to the required 5.0 percent.

Data Sources and Limitations

The statistics in this article are based on a sample of Reporting Years 1991 and 1992 Forms 990-PF that were filed with the IRS. For 1992, for example, IRS required organizations having accounting periods beginning in 1992 (and therefore ending between December 1992 and November 1993) to file a Form 990-PF. Some part-year returns were included in the samples for organizations that changed their accounting periods, or filed initial or final returns. More than 61 percent of the foundations in the sample had accounting periods covering Calendar Year 1992 or, in some cases, part-year periods that ended in December 1992. The same was true for Reporting Year 1991. For charitable trusts, 58 percent filed calendar year returns for 1992 and over 55 percent did so for 1991. The 1992 and 1991 samples were stratified based on both the size of book value of total assets and the type of organization (either a foundation or a 4947(a)(1) charitable trust) [34].

Foundation returns were selected at rates that ranged from approximately 5 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 31 to 100 percent. The 5,761 returns in the 1992 sample (4,929 foundations and 832 trusts) were drawn from an estimated population of 42,428 foundations and 2,932 trusts. Similarly, 5,574 returns in the 1991 sample (4,381 foundations and 1,193 trusts) were drawn from an estimated population of 41,348 foundations and 2,662 trusts. The magnitude of sampling error, measured by coefficients of variation for selected items for Reporting Year 1992 is shown in Figure P.

The samples were designed to provide reliable estimates of total assets and total revenue. For both 1991 and 1992, to accomplish this, 100 percent of foundation returns with book value of assets of \$10 million or more and 100 percent of charitable trust returns with book value of assets of \$1 million or more were included in the sample, since these were the returns that, in dollar terms, accounted for the majority of activity. Efforts were made to verify that organizations selected as foundations were, in fact, foundations; and that organizations selected as trusts were, in fact, trusts. The relatively small number of foun-

Figure P

Coefficients of Variation for Selected Items, by Type of Organization, 1992

Item	Private foundations	Charitable trusts
Total assets (fair market value) Total revenue	0.39 1.87	0.57 1.24
Total expenses	2.06	2.06
Contributions, gifts, and grants paid	2.25	2.61

dations in the sample that were incorrectly selected as trusts were ultimately re-classified as foundations (for the statistics) using identification codes from the IRS Exempt Organization Master File. However, the weights used for these organizations were based on the original sample selection classification. These same methods were used for the trusts that were incorrectly sampled as foundations.

Approximately 34 percent of all foundations, including those reclassified as foundations, reported \$10 million or more in book value of total assets for 1992. These foundations reported 80 percent of the estimated book value of assets of all foundations. While these foundations were selected at a rate of 100 percent, the remaining foundation population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 4.9 percent for returns with assets zero, unreported, or less than \$100,000; 5.9 percent for returns with assets of \$100,000 to less than \$1 million; and 14.4 percent for returns with assets of \$1 million to less than \$10 million.

Approximately 37 percent of all 4947(a)(1) charitable trusts in the sample reported \$1 million or more in book value of total assets for 1991. These trusts reported 79 percent of the book value of assets of all trusts. While these trusts were selected at a rate of 100 percent, the remaining trust population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 31.1 percent for returns with assets zero, unreported, or less than \$100,000; and 27.9 percent for returns with assets of \$100,000 to less than \$1 million. Sampling rates for both foundations and trusts were similar for 1991 data.

The population from which the 1991 and 1992 samples were drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1991 and 1992 for the 1991 sample and during 1992 and 1993 for the 1992 sample. Some of the records designated were for organizations that were deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations whose returns for the 1991 and 1992 Reporting Years were not yet

filed or were otherwise unavailable for the statistics (approximately 5 returns in each year), data were estimated using other returns having similar characteristics. For the unavailable active trust returns, which were smaller in size than those for foundations, prior-year data of those trusts were in most instances used as a substitute, approximately 5 returns in each year.

The data presented were obtained from returns as originally filed with IRS. The data were subject to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base. A general discussion of the reliability of estimates based on samples, methods for evaluating both the magnitude of sampling and non-sampling error, and the precision of sample estimates can be found in the general Appendix to this report.

Explanation of Selected Terms

The following explanations describe terms as they applied to both private foundations and charitable trusts for 1991 and 1992. Unless otherwise indicated, all references to foundations also apply to trusts.

Adjusted Net Income. -- In general, this was the amount by which a private foundation's gross income exceeded the expenses associated with earning the income. Included were all amounts derived from, or connected with, property held by the foundation, such as net short-term capital gain, ordinary investment income (dividends, interest, rents, and royalties), and income from amounts set aside for future charitable use, from all charitable functions, or from unrelated trade or business activities. Excluded were contributions received and long-term capital gains. Long-term capital losses could be reported as "other expenses" for the calculation of adjusted net income. This item is primarily used to determine if an operating foundation met the required "income test." This test demonstrates if the operating foundation spent the vast majority of its investment income on the direct, active conduct of tax-exempt charitable activities. See operating foundation and section 4947(a)(1) charitable trusts in this section. This item was reported on Form 990-PF, Part I, line 27c, column (c).

Assets Zero or Unreported.--Included in this asset size category were: (1) final returns of liquidating or dissolving foundations that had disposed of all assets; (2) returns of those foundations reporting zero end-of-year assets that had apparently distributed (or disposed of) all assets and income received during the year; and (3) returns of those foundations that did not report assets. A liquidating or

dissolving foundation usually passes its assets on to another foundation or to a public charity.

Capital Gain Net Income.--This was the amount of net gains from sales or dispositions of property used for investment purposes (property used for charitable purposes was excluded). Capital losses from the sale or other disposition of property could be subtracted from capital gains only to the extent of such gains. Capital gain net income was used in the computation of "net investment income" (on which an excise tax generally had to be paid). In contrast, the net gain (or loss) per the books from the sale of all assets (other than inventory), including those used for both investment and charitable purposes, was reported as "net gain (or loss) from the sale of assets" on Form 990-PF, Part I, line 6, column (a). This item, capital gain net income, was reported on Form 990-PF, Part I, line 7, column (b).

Charitable Trust.--A charitable trust, also referred to as a "nonexempt" charitable trust, was defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) that has amounts in trust for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the excise tax provisions that apply to private foundations and are required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in the statistics.) Nonexempt charitable trusts that are treated as private foundations must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Fiduciary Income Tax Return. Data from this form are not included in the statistics of this article.

Disbursements for Exempt Purposes.--These deductions comprised the largest component of "qualifying distributions" and included grants paid, operating expenses, and necessary and reasonable administrative expenditures for activities that were directly related to the tax-exempt purposes of the foundation. These amounts were determined solely on the basis of the cash receipts and disbursements method of accounting, as required by law and regulations. This item was reported on Form 990-PF, Part I, line 26, column (d).

Disqualified Persons.--With respect to engaging in prohibited transactions with a private foundation, such as "self-dealing," the following were considered disqualified persons: (1) all substantial contributors to the foundation

(generally, those who contributed an amount over \$5,000 that was also more than 2 percent of total contributions received by the foundation); (2) foundation officers, directors, trustees, or managers; (3) an owner of more than a 20-percent interest (based on voting power, profits interest, or beneficial interest) in an organization that was a substantial contributor to the foundation; (4) a member of the family of any individual described above (including spouses, ancestors, children, grandchildren, great-grandchildren, and spouses of children, grandchildren and great-grandchildren; but not including brothers or sisters); (5) organizations in which persons described above held a total beneficial interest of more than 35 percent; (6) another private foundation, for purposes of the tax on excess business holdings, that was effectively controlled by a person or persons in control of the foundation in question or to which substantially all of the contributions were made by a disqualified person; and (7) certain government officials, for purposes of the tax on "self-dealing."

Distributable (Payout) Amount.--This was the minimum payout amount that was required to be distributed by nonoperating foundations by the end of the year following the year for which the return was filed. Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of net investment assets, called the "minimum investment return," minus the excise tax on net investment income and the income tax under subtitle A, plus or minus other adjustments, either allowed or required (see "Net Adjustments to Distributable Amount").

The tax under subtitle A is levied on charitable trust and taxable private foundation income (usually from investments) that is not distributed for charitable purposes. The tax reported on Form 1041 for trusts and Form 1120, *U.S. Corporation Income Tax Return* for taxable private foundations. Taxable private foundations are those entities that may operate as taxable entities but will continue to be treated as private foundations until their tax status as such is terminated.

The distributable amount item was reported on Form 990-PF, Part XI, line 7.

Excess Distributions Carryover.--This was the amount distributed, after fulfilling the charitable payout requirement, that equaled the excess of qualifying distributions for 1992 over the distributable amount. If necessary, excess amounts from the current year could be carried forward to be applied to the distributable amount for the 5 following years. This item was reported on Form 990-PF, Part XIII, line 9.

Inventories.--Included was the value of materials, goods and supplies purchased or manufactured by the organization and held for sale or use in some future period. This item was reported on Form 990-PF, Part II, line 8, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Charitable-use.--This represented either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment not held for investment purposes and used by the organization in conducting its charitable activities. This item was reported on Form 990-PF, Part II, line 14, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Investment-use.--This represented either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment held for investment purposes, such as rental properties. This item was reported on Form 990-PF, Part II, line 11, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Minimum Investment Return.--This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire these assets and the cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount." This item was reported on Form 990-PF, Part X, line 6.

*Net Adjustments to Distributable Amount.--*Adjustments that increased the "distributable amount" consisted of increases attributable to the income portion (as distinct from the principal portion) of distributions from split-interest trusts on amounts placed in trust after May 26, 1969. (A split-interest trust is a trust that is not exempt from tax and not all of whose interests are devoted to charitable, religious, educational, and like purposes, but that has amounts in trust for which a charitable contribution deduction was allowed.) These organizations file Form 5227, Split-Interest Trust Information Return. Recoveries of amounts previously treated as qualifying distributions also had to be added back to the distributable amount. Adjustments that decreased the distributable amount were the result of income required to be accumulated by the terms of an organization's governing instrument. These adjustments were allowed only for foundations or trusts organized before May 27, 1969, whose governing instrument continued to require such accumulation, since State Courts would not allow the organization to change its governing instrument. These items were reported on Form 990-PF, Part XI, lines 4a, 4b, and 6.

Net Gain (or Loss) from Sales of Assets.--Included were profits and losses from sales of items such as securities, land, buildings, or equipment. Gain or loss reflected the amount shown on the books of the foundation and included any amount from the sale of property used for either investment or tax-exempt charitable purposes. Most of the gain or loss was from sales of stocks and bonds. Profit or loss from the sale of inventory items was included in gross profit (loss) from business activities. This item was reported on Form 990-PF, Part I, line 6, column (a).

Net Investment Assets (Noncharitable-use Assets).--For purposes of calculating "minimum investment return," only the average, rather than end-of-year, fair market value of assets that were not used or held for use for tax-exempt purposes entered into the computation. An asset was considered an investment asset if it was not used in carrying out a charitable, educational, or other similar function which gave rise to the tax-exempt status of the foundation. Examples include the fair market value of securities and rental property owned by the foundation for investment purposes. The asset amounts included on the balance sheet in Part II of the Form 990-PF included both investment and charitable-use assets. This item, which was reported on Form 990-PF, Part X, line 5, is not shown separately in the tables of this article. However, "minimum investment return," which is based on net investment assets, is shown in the tables.

Net Investment Income.--This was the amount by which the sum of gross investment income plus capital gain net income exceeded allowable deductions. Included in investment income were interest, dividends, capital gain net income, rents, payments with respect to securities loans, and royalties. Excluded were tax-exempt interest on state and local government obligations and any investment income derived from unrelated trade or business activities that were subject to the "unrelated business income" tax reported on Form 990-T, Exempt Organization Business Income Tax Return. This item was reported on Form 990-PF, Part I, line 27b, column (b).

Nonoperating Foundations (and Section 4947(a)(1) Charitable Trusts).--These were organizations that generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to those (operating) foundations and trusts that engaged in charitable activities themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants.

Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period. An organization's status as a nonoperating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Operating Foundations (and Section 4947(a)(1) Charitable Trusts).--These organizations generally expended their income for direct, active involvement in a tax-exempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test."

To meet the income test, a foundation or trust had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). Simply put, to meet the assets test, a foundation or trust had to directly use 65 percent or more of its assets for the active conduct of charitable activities. To meet the endowment test, a foundation or trust had to regularly make distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." To meet the support test, a foundation or trust had to regularly receive substantially all of its support (other than from gross investment income) from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from gross investment income) from any one such qualifying exempt organization; and (b) no more than 50 percent of its support from gross investment

Distributions made by a private nonoperating foundation or trust to an operating foundation or trust qualified toward meeting the nonoperating organization's distribution requirement. (Distributions made by one nonoperating foundation or trust to another were subject to a number of conditions and restrictions requiring a "pass-through" of the distribution, whereby the donor organization received credit for a qualifying distribution but the donee organization did not.) Additionally, contributions to operating foundations or trusts were deductible on the donors' individual income tax returns, up to 50 percent of their "adjusted gross income" (as opposed to 30 percent for contributions to nonoperating foundations).

While most operating foundations paid the excise tax on net investment income, 26 percent of operating foundations were considered exempt from this tax for 1992 under section 4940(d)(2) of the Internal Revenue Code. In order to be exempt, an operating foundation was required to meet the following requirements in any given year: (1) maintain public support for a minimum of 10 taxable years; (2) maintain a governing body at all times that is broadly representative of the general public and that is comprised of no more than 25 percent disqualified individuals; and 3) at no time during the year include a disqualified individual as an officer of the foundation. An organization's status as an operating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Other Assets.--Assets reported as "other" included: (1) those assets not allocable to a specific asset item on the Form 990-PF balance sheet or not included elsewhere on the return; and (2) certain amounts given special treatment in the course of statistical processing. The first category included such items as construction reserve land, dividends receivable, escrow deposits, income tax refunds, interest discounts, interest-free loans, overdraft protection and program-related investments. The second category included atypical amounts reported by the return filer as "negative liabilities." These items were reported on Form 990-PF, Part II, line 15, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Other Investments.--Investments reported as "other" included such items as advances, bank certificates, cash values of life insurance, certificates of investment, miscellaneous loan income, patronage dividends, and investments in art, coins, gold, and gems. These items were reported on Form 990-PF, Part II, line 13, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Private Foundation.--A private foundation was defined in Internal Revenue Code section 501(c)(3) as a nonprofit organization with a narrow source of funds that operated or supported educational, scientific, charitable, religious, and other programs dedicated to improving the general welfare of society. A private foundation qualified for tax-exempt status under Code section 501(c)(3) but was not (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that was operated by, or in connection with, any of the above described organizations; or (4) an organization that conducted tests for public safety. The primary difference between a private foundation and a public charity was the sources of each type of

organization's funding. A foundation typically received its funds from an individual, a family, or a corporation, while a public charity received its funds primarily from a large number of sources within the general public.

Qualifying Distributions.--Qualifying distributions included disbursements for charitable purposes (grants, direct expenditures to accomplish charitable purposes, and charitable-purpose operating and administrative expenses); amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation's or trust's obligation to pay out its "distributable amount." This item was reported on Form 990-PF, Part XII, line 4.

Set-Asides.--Amounts set-aside for specific charitable purposes can be treated as qualifying distributions only if the foundation establishes to the satisfaction of the IRS that the amount will be paid for the specific project within 60 months from the date of the first set-aside and if the foundation meets either the suitability test or the cash distribution test. To meet the suitability test a foundation must receive prior approval from the IRS and must demonstrate that the project can better be accomplished by a setaside than by an immediate payment of funds. To meet the cash distribution test under section 4942(g)(2)(B)(ii) a foundation must attach a schedule to its annual return showing how the requirements are met. The foundation must attach a schedule for the year of the set-aside and for each subsequent year until the set-aside amount has been distributed. Set-asides were reported on Form 990-PF, Part XII. lines 3a and 3b.

Total Assets.--This was the sum of all assets reported in the foundation's balance sheet, shown at both book value and fair market value. Total assets were reported on Form 990-PF, Part II, line 16, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Total Expenses.--This was the sum of contributions, gifts, and grants paid, plus various operating and administrative expenses related to both investment and charitable-purpose activities. Total expense items were reported as shown on the books and records of the foundation and were based on either the cash receipts or the accrual method of accounting. Total expenses were reported on Form 990-PF, Part I, line 26, column (a).

Total Revenue.--This was the sum of gross contributions, gifts, and grants received; interest on savings and temporary cash investments; dividends and interest from securities; net gain (or loss) from sales of assets (mostly investment assets, but also charitable-use assets); gross rents and royalties; gross profit (or loss) from business activities; and other income (such as royalty income, program-related investment income, interest earned on assets used for charitable purposes, and imputed interest on certain deferred payments). These other income items were reported on Form 990-PF, Part I, line 11, column (a). Total revenue items included both investment and charitable-use items, were reported as shown on the books and records of the foundation, and were based on either the cash receipts or the accrual method of accounting. Total revenues were reported on Form 990-PF, Part I, line 12, column (a).

Undistributed Income.--This is the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years. Sanctions were imposed in the form of excise taxes on private foundations that did not pay out an amount equal to the "distributable amount" by the end of the following tax year. This item was reported on Form 990-PF, Part XIII, line 6f, column (d).

*Unrelated Business Income (UBI).--*This is an exempt organization's income from a trade or business that was regularly carried on by the organization and that was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. A tax, as reported on the Form 990-T, Exempt Organization Business Income Tax Return, was imposed on "unrelated" business taxable income (UBTI)." Unrelated business taxable income is gross unrelated business income, less deductions directly connected with carrying on the trade or business and less certain other deductions. The unrelated business income tax was determined based on the corporate or trust tax rates that were in effect for a given tax year. (Gross) unrelated business income and the associated business codes were reported on Form 990-PF, Part XVI-A, columns (a) and (b).

Notes and References

- [1] The amount of contributions, gifts, and grants paid by foundations is based on the amount that foundations actually disbursed for 1992 using the cash receipts and disbursements method of accounting.
- [2] This organization, the Wellcome Trust, is a private foundation funded by a British pharmaceutical

company. For 1990, the foundation reported \$9.0 billion in fair market value of total assets and earned \$158 million in total revenues. For 1991, the foundation held \$10.6 billion in assets and later sold \$3.8 billion of its asset holdings (which increased its total revenue to \$4.0 billion). By the end of 1992, its assets dropped to \$5.1 billion and its total revenue dropped to \$574 million.

Because Forms 990-PF on which private foundations report their financial information are public documents, the names of individual foundations can be used in this article.

- [3] Unless otherwise indicated, dollar amounts and percentages in the text and figures are not adjusted for inflation. However, Figure B, which presents data over a 10-year time period, does present *real* changes in revenue, assets, and charitable distributions. Adjustments for inflation are based on the 1987 implicit price deflators for the Gross Domestic Product from the Department of Commerce, Bureau of Economic Analysis, found in Council of Economic Advisors, *Economic Report of the President*, 1995, Table B-3.
- [4] The Explanation of Selected Terms section at the end of this article defines total assets, total revenues and other selected items reported on Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation). Also, all references to assets are stated at fair market value unless book value is specifically noted.
- [5] The data presented in this article are from the Forms 990-PF, filed for Reporting Years 1991 and 1992, by organizations which had accounting periods beginning in either 1991 or 1992. Therefore, the statistics for Reporting Year 1991 include organizations with accounting periods that ended sometime during the period December 1991 through November 1992. Similarly, the statistics for Reporting Year 1992 include organizations with accounting periods that ended sometime during the period December 1992 through November 1993. For a more detailed analysis, see the section, Data Sources and Limitations.
- [6] Statistics of Income periodically consolidates exempt organization data by publishing volumes in the *Exempt Compendium* series. These volumes include annual analyses of data that have appeared in the

quarterly Statistics of Income Bulletin, or which were originally prepared for other publications such as the Journal of Nonprofit Management and Leadership, Trusts and Estates, the Independent Sector's Research Forum, and the American Statistical Association. Private foundation data for 1987 and earlier years were published in the Compendium of Studies of Tax-Exempt Organizations, 1974-1987. Data for Reporting Years 1986 through 1990 are included in the second volume of the series, the Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2.

Both volumes of the Compendium are included under Publication 1416 and are available exclusively from the Statistics of Income Division. Results of private foundation studies for 1982, 1983, and 1985-1992 have also been published in various issues of the Statistics of Income Bulletin: Fall 1985, Volume 5, Number 2 (1982 data); Winter 1986-1987, Volume 6, Number 3 (1983 data); Summer 1989, Volume 9, Number 1 (1985 data); Spring 1991, Volume 10, Number 4 (1986-1987) data); Winter 1991-1992, Volume 11, Number 3 (1988) data); Winter 1992-1993, Volume 12, Number 3 (1989) data); Winter 1993-1994, Volume 13, Number 3 (1990 data); Winter 1994-1995, Volume 14, Number 3 (1991 data); and Winter 1995-1996, Volume 15, Number 3 (1992 data). Private foundation data, primarily for 1974, were published in the special report, Statistics of Income—1974-1978, Private Foundations.

- [7] Council of Economic Advisors, *Economic Report of the President*, 1995, Table B-2.
- [8] For an in-depth discussion of organizations other than private foundations that are tax-exempt under Internal Revenue Code section 501(c)(3), see "Charities and Other Tax-Exempt Organizations, 1992," *Statistics of Income Bulletin*, same issue.
- [9] Of the 466,961 nonprofit charitable organizations recognized by the Internal Revenue Service under section 501(c)(3), there were 157,941 Forms 990 and 990-EZ and 42,428 Forms 990-PF filed for 1992. Those not required to file included religious organizations.
- [10] For purposes of the analyses, "charitable trusts" refer only to the section 4947(a)(1) charitable trusts that file Form 990-PF, while "private foundations" refer to the section 501(c)(3) private foundations that file Form 990-PF.

- [11] Programs termed "charitable" refer to tax-exempt activities which are charitable, educational, scientific, social, literary, or religious in nature.
- [12] The net value of noncharitable-use assets was reported on Form 990-PF, Part X, line 5. For more information, see net investment assets in the Explanation of Selected Terms section.
- [13] For purposes of the analyses, the term "grantmaking" in the text and tables refers to any organization reporting contributions, gifts, and grants paid on Part I of the Form 990-PF.
- [14] A foundation is considered domestic if it is organized in the United States; however, this does not necessarily imply that all of its assets, activities, or grant recipients are domestic.
- [15] Six out of the ten largest foundations had calendar year accounting periods, meaning that all of their activity occurred during the calendar year period. However, four of the ten had other fiscal year accounting periods. For instance, for the 1992 Reporting Year, the Ford Foundation had an accounting period ending in September 1993; the two W.K. Kellogg Foundations in August 1993; and the Annenberg Foundation and J. Paul Getty Trust both in June 1993; therefore, much of their activity for 1992 occurred in Calendar Year 1993. See the section, Data Sources and Limitations.
- [16] For more information on the unrelated business income of exempt organizations, see Riley, Margaret, "Exempt Organization Business Income Tax Returns, 1992," *Statistics of Income Bulletin*, Volume 15, Number 4, pp. 64-81.
- [17] While all foundations reporting revenue (with the exception of those reporting only contributions) were required to complete the "Analysis of Income-Producing Activities" schedule of the return, only 77 percent actually did so on their return as originally filed.
- [18] This pattern was true for all of the investment categories noted, with the exception of investments in land, buildings, and equipment. While both small and large foundations realized decreases in investments in land, buildings, and equipment, 9 percent and 15 percent, respectively, medium foundations realized an increase of 7 percent in this asset.

- [19] Salamon, Lester M. and Voytek, Kenneth P., Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance, Washington, DC: The Council on Foundations, 1989; and Salamon, Lester M. and Voytek, Kenneth P., Foundation Investment and Payout Performance: An Update, Washington, DC: The Council on Foundations, 1991.
- [20] Salamon and Voytek, Ibid.
- [21] Salamon and Voytek, Ibid.
- [22] Net investment income is comprised of income not considered to be related to a foundation's charitable purpose, such as interest, dividends, and capital gain net income. The net investment income amount used in calculating NII yield was obtained from column (b) of the income statement, found in Part I of the Form 990-PF.
- [23] The rate of total return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation assets. See Salamon and Voytek, *Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance*, Washington, DC: The Council on Foundations, 1989, p. 32. The formula is as follows:

Rate of Total Return=

[Ending Fair Market Value of Assets

- Beginning Fair Market Value of Assets
- Contributions Received
- + Grants Paid
- + Operating and Administrative Expenses
- + Excise Tax Paid on Net Investment Income]
 DIVIDED BY

[Beginning Fair Market Value of Assets

+ 50% of Contributions Received]

To calculate the rate of total return shown in Figure H, samples of private foundation information returns for consecutive years were matched in order to analyze both the beginning- and end-of-year fair market value data. Due to the lower sampling rates used for the smaller foundations, the rate at which returns were matched for consecutive years was not

high enough for 1988 to ensure a proper level of statistical reliability. Therefore, the rate of total return was only calculated for the medium- and large-size foundations for that year.

The beginning fair market value of assets for any given year equals the ending fair market value reported on the prior year's tax return. Thus, in order to provide a consistent form of measurement by which to compare rates of total return among different years, the ending fair market value of asset amounts (reported for both the year subject to the computation and the prior year) were used to compute the rate of return. In order to obtain an inflation-adjusted real rate of return, the figure equaling the beginning-of-year fair market value of assets was adjusted using the Gross Domestic Product implicit price deflator (see footnote 3).

- [24] For a more detailed discussion, see Meckstroth, Alicia, "Analyzing the Trends Within Private Foundations," *Trusts and Estates*, August 1991, pp. 38-47; and, Meckstroth, Alicia, and Riley, Margaret, "Private Foundation Returns, 1986-1987," *Statistics of Income Bulletin*, Spring 1991, Volume 10, Number 4.
- [25] For valuing net investment (noncharitable-use) assets for the purpose of computing the minimum investment return, reductions for "blockage" or other marketability discounts were permitted. These discounts (limited to 10 percent in the case of securities, but statutorily unlimited in other cases, such as for land holdings) could effectively reduce the net investment asset base and, thus, result in a minimum payout level of less than 5 percent of the full fair market value. An example of this type of discounting was a foundation that owned 15 percent of the stock of a publicly-held corporation. This percentage represented a block of securities so large in relation to the volume of actual sales on the existing market that it could not be liquidated in a reasonable time without depressing the market price of the securities. Because of this situation, the foundation was allowed to discount the fair market value of the stock for the purposes of reporting it on the Form 990-PF.
- [26] After applying current-year qualifying distributions and any carryovers from previous years, the amount

- by which foundations fell short of meeting the charitable payout requirement was called "undistributed income."
- [27] Renz, Loren; Lawrence, Steven; and Treiber, Rikard R., Foundation Giving: Yearbook of Facts and Figures on Private, Corporate and Community Foundations, 1995 edition, New York: The Foundation Center, 1995, Table 56, p. 56.
- [28] Ibid., pp. 49-50.
- [29] To calculate the payout rate, the amount of (adjusted) qualifying distributions was divided by the amount of the monthly average of net investment (or noncharitable-use) assets. This payout formula adjusts qualifying distributions with additions and subtractions that are made to the required "distributable amount" on the Form 990-PF. The numerator of the formula also includes excess distributions made in the past and applied to the requirement of the current filing year.
- [30] Salamon, Ibid., pp. 269-270.
- [31] Department of Commerce, Bureau of Economic Analysis, *Ibid.*, Table B-2.
- [32] While all trusts reporting revenue (with the exception of those receiving only contributions) were required to complete the "Analysis of Income Producing Activities" schedule of the return, only 90 percent did.
- [33] Department of Commerce, Bureau of Economic Analysis, *Ibid.*, Table B-2.
- [34] The samples were stratified based on book value of assets, rather than fair market value, because fair market value of assets was not fully validated by the Internal Revenue Service during administrative processing for the Business Master File (BMF) system, from which the Statistics of Income samples were drawn. Book value of assets, on the other hand, was fully validated. Beginning with the 1992 Reporting Year, the IRS fully validated the fair market value of assets for purposes of the BMF system. This makes it possible for Statistics of Income to begin sampling the 990-PF tax returns based on the fair market value of total assets for the 1994 Reporting Year.

N/A - not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Includes \$170 million in gross investment from 30 foreign foundations.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1992 using a cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

NOTE: Detail may not add to totals because of rounding.

Table 2.--All 4947(a)(1) Charitable Trusts Treated as Foundations: Number and Selected Financial Data, by Type of Charitable Trust and Size of Fair Market Value of Total Assets

N/A - not applicable.
* Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500.

² Includes some gross investment income from foreign trusts.

³ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1992 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because trusts may use either the cash receipts and disbursements or the accrual method of accounting. NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipts and disbursements method of accounting.

NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500.

² The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipts and disbursements method of accounting.

NOTE: Detail may not add to totals because of rounding.

Data Release

or 1993, private foundations and charitable trusts reported \$25.7 billion in total revenues and \$11.8 billion in contributions, gifts, and grants paid out. Private foundations are generally larger in terms of asset size and more numerous than charitable trusts. The 44,004 private foundations accounted for 98.6 percent of the combined total of \$210.4 billion in assets (based on fair market value), while the 2,934 charitable trusts accounted for the remaining 1.4 percent.

A private foundation is a nonprofit, tax-exempt charitable organization that is narrowly supported and controlled, usually by an individual, family, or corporation. A charitable trust filing under Internal Revenue Code section 4947(a)(1) is also nonprofit, but is not tax-exempt and is typically supported and controlled by an individual or family. Both private foundations and charitable trusts are required to file and make public an annual information return, Form 990-PF, *Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation)*. The statistics contained in this data release are based on the data from these forms.

Private Foundations

Total private foundation revenues increased by nearly 8 percent from \$23.6 billion for 1992 to \$25.4 billion for 1993 [1]. The two largest sources of foundation revenue, net gains (less losses) from the sales of assets and contributions, gifts, and grants received, increased overall by approximately 13 percent over this period to \$7.6 billion and \$9.0 billion, respectively.

Total assets (based on fair market value) grew by 8 percent to \$207.5 billion for 1993 compared to the previous year. The largest component of total assets, investments in securities, increased by nearly 5 percent to \$151.2 billion. Nearly 68 percent of these investments were in corporate stock, which continued to dominate total investments in securities. The remaining 32 percent of investments in securities was in government obligations and corporate bonds. Investments in government obligations, alone, fell by 5 percent to \$29.1 billion for 1993, while investments in corporate bonds increased by 3 percent to \$19.3 billion. (Tables 1 and 3 present both fair market and book values for these asset accounts.)

Section 4947(a)(1) Charitable Trusts

Charitable trusts, as defined under Internal Revenue Code section 4947(a)(1), reported nearly \$2.9 billion in total

This data release was written by Paul Arnsberger, an economist with the Special Projects Section, Special Studies and Publications Branch, under the direction of Michael Alexander, Chief. assets (fair market value) for 1993, a decrease of nearly 9 percent from 1992. Investments in securities, nearly 73 percent of total assets, decreased 4 percent to \$2.1 billion. This decrease was due to a 5-percent drop in corporate stock (fair market value), which fell to \$1.3 billion. Charitable contributions, gifts, and grants paid, plummeted 18 percent to \$.13 billion (as reported on a cash basis in Table 2).

Total revenues dropped sharply for 1993, to \$291.3 million, nearly 16 percent. The largest decrease was for net gains (less losses) from sales of assets, down by nearly 21 percent, to \$99.8 million. Unlike private foundations, net gain (less losses) from sales of assets was the primary source of revenue for charitable trusts. Dividends and interest from securities accounted for \$106.7 million of revenues for 1993, followed by contributions, gifts, and grants of \$52.1 million.

Data Sources and Limitations

Tables 1 and 3 provide information for Reporting Year 1993 for private foundations, while Tables 2 and 4 provide similar data for charitable trusts. The statistics are based on a sample of Reporting Year 1993 Forms 990-PF that were filed with the Internal Revenue Service (IRS). These returns were filed by organizations with accounting periods beginning in 1993 (and therefore ending between December 1993 and November 1994). Some part-year returns were included in the sample for organizations that changed their accounting periods, or filed initial or final returns. Approximately 63 percent of the foundations and 60 percent of charitable trusts had full-year accounting periods covering Calendar Year 1993, or part-year accounting periods that ended in December 1993. Additionally, 61 percent of total foundation assets and 52 percent of total trust assets were for the calendar-year accounting period. Therefore, the majority of the financial activities reflected in the statistics can be associated with Calendar Year 1993.

The 1993 sample was stratified based on both the size of book value of total assets and the type of organization (either a private foundation or a charitable trust). Foundation returns were selected at rates that ranged from approximately 3.5 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 29 to 100 percent. The 5,364 returns in the 1993 sample (4,533 foundations and 831 trusts) were drawn from the estimated population totals shown in Tables 1 through 4. The magnitude of sampling error, measured by the coefficient of variation, for selected financial data is shown in Figure A.

Figure A

Coefficients of Variation for Selected Items, by Type of Organization, Reporting Year 1993

Item	Private foundations	Charitable trusts
Total assets (fair market value)	1.08	4.29
Total revenue	1.35	6.79
Total expenses	1.55	4.57
Contributions, gifts, and grants paid	1.78	5.10

The population from which this sample was drawn consisted of 1993 Form 990-PF records posted to the IRS Business Master File during 1993 and 1994. Some of the records designated were for organizations deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations and trusts whose returns for the 1993 Reporting Year were not yet filed or were otherwise unavailable for the statistics, data were estimated using prior-year returns.

The data presented were obtained from returns as originally filed. The data were subjected to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Explanation of Selected Terms

Charitable Trust -- This type of organization, also referred to as a "nonexempt" charitable trust, is defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the same excise tax provisions that apply to private foundations and are required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in the statistics [2].) Nonexempt charitable trusts must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Fiduciary Income Tax Return.

Distributable Amount -- This was the minimum payout amount that was required to be distributed by the end of the year following the year for which the return was filed.

Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of "net investment assets," called the "minimum investment return," minus taxes on both "net investment income" and "unrelated business income," plus or minus other adjustments, either allowed or required.

Excess Distributions Carryover -- The excess carryover equaled the excess of "qualifying distributions" for 1993 over the "distributable amount." "Excess" amounts from the current year could be carried forward to be applied to the distributable amount for the following 5 years.

Minimum Investment Return -- This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire them and cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount."

Nonoperating Foundations (and Section 4947(a)(1) Charitable Trusts) -- Nonoperating foundations and trusts generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to those (operating) foundations and trusts which engaged in charitable activities, themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants to other organizations. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period.

Operating Foundations (and Section 4947(a)(1) Charitable Trusts) -- These organizations generally expended their income for direct, active involvement in a taxexempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the private foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test." (The tests are described below with reference to private foundations, but apply in the same manner to charitable trusts.)

To meet the income test, a private foundation had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such pro-

grams). The assets test was met if 65 percent or more of the foundation's assets were directly used for the active conduct of charitable activities. The endowment test was met if the foundation normally made distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." The support test was met if the foundation normally received substantially all of its support (other than from "gross investment income") from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from "gross investment income") was normally received from any one such qualifying exempt organization; and (b) no more than 50 percent of its support was normally received from gross investment income.

Private Foundation -- This type of organization is defined in Internal Revenue Code section 501(c)(3) as a nonprofit corporation, association, or trust with a narrow source of funds that operated or supported social, educational, scientific, charitable, religious, or other programs dedicated to improving the general welfare of society. A private foundation is not: (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that was operated by, or in connection with, any of the above described organizations; and (4) an organization that conducts tests for public safety. The primary difference between a private foundation and a public charity is the source of each type of organization's funding. A foundation usually receives its funds from an individual, a family, or a corporation, while a public charity receives its funds primarily from a large number of sources within the general public.

Qualifying Distributions -- Qualifying distributions include disbursements for charitable purposes; amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation's or trust's obligation to pay out its "distributable amount."

Undistributed Income -- Undistributed income was the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years.

\$50,000,000 unde \$100,000,000							N/A N/A

N/A - not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1993 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

² Less than \$500.
NOTE: Detail may not add to totals because of rounding.

Table 2.--All Section 4947(a)(1) Charitable Trusts Treated as Foundations: Number and Selected Financial Data, by Type of Charitable Trust and Size of Fair Market Value of Total Assets

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that trusts actually disbursed for charitable purposes for 1993 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because trusts may use either the cash receipts and disbursements or the accrual method of accounting. NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipts and disbursements method of accounting. NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipts and disbursements method of accounting.

² Less than \$500.

by Paul Arnsberger

or 1994, private foundations and charitable trusts reported \$30.3 billion in total revenues and \$12.5 billion in contributions, gifts, and grants paid out. Private foundations are generally larger in terms of asset size and more numerous than charitable trusts. The 45,841 private foundations accounted for 98.5 percent of the combined total of \$225.9 billion in assets (based on their fair market value), while the 2,909 charitable trusts accounted for the remaining 1.5 percent.

A private foundation is a nonprofit, tax-exempt charitable organization, but in contrast to most charities, it is narrowly supported and controlled, usually by an individual, family, or corporation. A charitable trust filing under Internal Revenue Code section 4947(a)(1) is also a nonprofit organization, but it is not tax-exempt and is typically supported and controlled by an individual or family. Both private foundations and charitable trusts are required to file and make public an annual information return, Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation). The statistics contained in this data release are based on data from these forms.

Figure A shows a 2-year comparison of selected data items for private foundations and charitable trusts [1]. Both types of organizations reported aggregate increases in all the major asset, revenue, and expense items. A large part of the 32-percent increase in the contributions, gifts, and grants received by private foundations can be attributed to a single organization, which received a gift of nearly \$900 million [2]. Charitable trusts received over twice as much in contributions, gifts, and grants as those reported for 1993. The reason for such a large gain is twofold: many established trusts received significant contributions during the year; and several more new trusts were set up with very large gifts. Net gains from sales of assets rose sharply as well, because a few of the largest trusts reported huge increases in this area.

Data Sources and Limitations

Tables 1 and 3 provide information for Reporting Year 1994 for private foundations, while Tables 2 and 4 provide similar data for charitable trusts. The statistics are based on a sample of Reporting Year 1994 Forms 990-PF that were filed by organizations with accounting periods beginning in 1994 (and, therefore, ending between December 1994 and November 1995). Some part-year

This data release was written by Paul Arnsberger, an economist with the Special Projects Section, Special Studies and Publications Branch, under the direction of Michael Alexander, Chief. returns were included in the sample for organizations that changed their accounting periods or filed initial or final returns. Approximately 63 percent of the foundations and 60 percent of charitable trusts had full-year accounting periods covering Calendar Year 1994 (or part-year accounting periods that ended in December 1994). Additionally, 59 percent of total foundation assets and 55 percent of total trust assets were reported for the calendar-year accounting period. Therefore, the majority of the financial activities reflected in the statistics can be associated with Calendar Year 1994.

The 1994 stratified sample was based on type of organization (either private foundation or charitable trust) and, for the first time, size of fair market value of total assets. (Previous-year samples were based on the book value of total assets.) Foundation returns were selected at rates that ranged from approximately 2.4 percent (for the

Both types of organizations reported aggregate increases in all the major asset, revenue, and expense items.

more numerous, but very small asset-size returns) to 100 percent (for the relatively few returns reporting large amounts of assets). Charitable trust returns were selected at rates that ranged from 13.6 to 100 percent. The 5,914 returns in the 1994 combined

sample (5,246 foundations and 668 trusts) were drawn from the estimated population totals shown in Tables 1 through 4.

Because the estimates are based on a sample, they are subject to sampling error. To properly use the data, the magnitude of the potential sampling error needs to be known. Coefficients of variation (CV's) are used to measure this magnitude. Figure B presents coefficients of variation for selected financial data. The smaller the coefficient of variation, the more reliable the estimate is judged to be.

The population from which this sample was drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1994 and 1995. For the small number of large foundations and trusts whose returns for the 1994 Reporting Year were not yet filed or were otherwise unavailable for statistics, data were estimated using prior-year returns.

The data presented were obtained from returns as originally filed. These returns were subjected to comprehensive testing and correction procedures to ensure statistical reliability and validity. In most cases, changes made to the original return through administrative processing,

audit procedures, or a taxpayer amendment were not incorporated into the data base.

Explanation of Selected Terms

Charitable Trust -- This type of organization, also referred to as a "nonexempt" charitable trust, is defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) for which donors are allowed to claim an income tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the same excise tax provisions as private foundations (described under Distributable Amount below) and are required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in the statistics [3].) Nonexempt charitable trusts must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes and must report such income and tax on Form 1041, U.S. Income Tax Return for Estates and Trusts.

Distributable Amount -- This was the minimum payout amount required to be distributed by the end of the year following the year for which the return was filed. Failure to distribute income within this period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of "net investment assets" (called the "minimum investment return"), minus taxes on both "net investment income"

and "unrelated business income," plus or minus other adjustments either allowed or required.

Excess Distributions Carryover -- The excess carryover equaled the excess of "qualifying distributions" for 1994 (see below) over the "distributable amount" (see above). "Excess" amounts from the current year could be carried forward to be applied to the distributable amount for the following 5 years.

Minimum Investment Return -- This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire them and cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount" (see above).

Nonoperating Foundations (and Section 4947(a)(1) Charitable Trusts) -- Nonoperating foundations and trusts generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, unlike (operating) foundations and trusts which engaged in charitable activities themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants to other organizations. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a specified period.

Operating Foundations (and Section 4947(a)(1) Charitable Trusts) -- These organizations generally expended their income for direct, active involvement in a tax-

Figure B

Coefficients of Variation for Selected Items, by Type of Organization, 1994

Item	Private foundations	Charitable trusts
Total assets (fair market value)	1.18	4.16
Total revenue	1.70	12.80
Total expenses	1.96	7.64
Contributions, gifts, and grants paid	2.28	9.11

exempt activity, such as operating a library or museum or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes applicable to their non-operating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the private foundation or trust had to meet both an "income test" and one of the following: an "assets test," an "endowment test," or a "support test." (The tests described below with reference to private foundations also apply to charitable trusts.)

To meet the "income test," a private foundation had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). The "assets test" was met if 65 percent or more of the foundation's assets were directly used for the active conduct of charitable activities. The "endowment test" was met if the foundation normally made distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." The "support test" was met if the foundation normally received substantially all of its support (other than from "gross investment income") from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from "gross investment income") was normally received from any one such qualifying exempt organization; and (b) no more than 50 percent of its support was normally received from "gross investment income."

Private Foundation -- This type of organization is defined in Internal Revenue Code section 501(c)(3) as a nonprofit corporation, association, or trust with a narrow source of funds that operated or supported social, educational, scientific, charitable, religious, or other programs

dedicated to improving the general welfare of society. A private foundation is *not*: (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that is operated by, or in connection with, any of the above-described organizations; and (4) an organization that conducts tests for public safety. The primary difference between a private foundation and a public charity is the source of funding for each type of organization. A foundation usually receives its funds from an individual, a family, or a corporation, while a public charity receives its funds primarily from a large number of sources within the general public.

Qualifying Distributions -- Qualifying distributions include disbursements for charitable purposes; amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions can be credited toward a foundation or trust's obligation to pay out its "distributable amount."

Undistributed Income -- Undistributed income is the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years.

Notes and References

- [1] For information on private foundations and charitable trusts for 1993, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1993," *Statistics of Income Bulletin*, Winter 1996-1997, Volume 16, Number 3.
- [2] The Ewing Marion Kauffman Foundation of Missouri reported revenue of \$892 million in 1994 thanks almost entirely to an \$891 million contribution from the EMK Charitable Remainder Trust. (Mr. Kauffman died in 1993.)
 - Because Forms 990-PF on which private foundations report their financial information are public documents, the names of individual foundations can be used in this article.

N/A - not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1994 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash receipts and disbursements or the accrual method of accounting.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that trusts actually disbursed for charitable purposes for 1994 using the cash receipts and disbursements method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because trusts may use either the cash receipts and disbursements or the accrual method of accounting.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipts and disbursements method of accounting.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipts and disbursements method of accounting.

² Less than \$500.

by Paul Arnsberger

rivate foundations contribute billions of dollars each year to charities and communities to support causes in such areas as education, health, human services, community development, the arts and humanities, and the environment. They represent over one-fifth of all Internal Revenue Code section 501(c)(3) nonprofit charitable organizations that file information returns with the Internal Revenue Service. For 1995, foundations made contributions, gifts, and grants totaling nearly \$12.9 billion, an increase of nearly 5 percent from the previous year [1]. The number of foundations also increased by 5 percent from 1994 to 1995 to nearly 48,000.

Foundations rely largely on asset growth, earned income on investments, and contributions received to support their charitable giving. Total foundation fair market value assets grew by 18 percent in 1995 to \$263.4 billion. Investment assets of \$246.1 billion represented the majority of foundation assets. Gains of 23 percent in the value of investments in corporate stock and 12 percent in the value of government obligations largely account for the 18-percent increase in investment assets. Total foundation revenue increased by 8 percent from 1994 to 1995 to \$32.3 billion. A significant increase of 38 percent in net gains from sales of assets offset a 20-percent drop in the amount of contributions received by foundations. Figure A shows the amounts of various private foundation revenues, assets, and expense items for 1994 and 1995 and the percentage change [2].

For 1995, over 2,700 nonexempt charitable trusts described in Internal Revenue Code section 4947(a)(1) held \$3.7 billion in total fair market value assets, realized \$411.8 million in total revenues, and distributed \$222.3 million in contributions, gifts, and grants. The amount of grants given by these charitable trusts increased by 34 percent from 1994 to 1995, despite a 3-percent decrease in revenue over this period. These trusts are discussed in detail later in this article under the heading Section 4947(a)(1) Nonexempt Charitable Trusts.

Paul Arnsberger is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief.

Statistics of Income Studies

The statistics presented in this article on both private foundations and charitable trusts are based on sample data from Form 990-PF, *Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation)*, the annual information return filed by these organizations [3]. Statistics of Income studies on private foundations have been conducted for Reporting Years 1974, 1979, 1982, 1983, and 1985 through 1994. Studies on 4947(a)(1) charitable trusts that are treated as private foundations have been conducted for Reporting Year 1979 and annually since 1989.

Private Foundations

Overview of Revenues, Assets, and Grants Paid

During the period from 1990 to 1995, charitable grants made by private foundations increased steadily each year with overall inflation-adjusted growth of 32 percent. Foundation assets and revenues increased in each year in this period except 1992, with total real growth of 39 percent and 44 percent, respectively. Substantial real increases in investments in corporate stock and net gains from sales of assets from 1990 to 1995, 69 percent and 164 percent, respectively, account for the overall increases in assets and revenues. The overall growth in foundation assets and revenues markedly exceeds the 10-percent real growth of Gross Domestic Product from 1990 to 1995 [4]. Figure B graphically displays the growth in real assets, revenues, and grants from 1990 to 1995.

The asset growth of foundations during the early 1990's helped to increase total grants paid over this same period. The charitable payout requirement for certain types of foundations (explained in detail in the section Charitable Payout Requirement and Qualifying Distributions) is based on the value of foundation investment assets; that is, as investment assets grow, so does the amount that foundations are required to distribute. Total investment assets increased in real terms by 37 percent from 1990 to 1995. Investment assets for "large" foundations, those holding \$50 million or more in fair market value of assets, grew in real terms by 41 percent over this period. The real amount of charitable grants distributed by large foundations also grew by 41

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" include such items as advances; certificates of investment; and investments in art, coins, gold, and gems.

percent from 1990 to 1995. Large foundations accounted for over two-thirds of all foundation assets in 1995. The number of these large foundations increased from 396 in 1990 to 609 in 1995 as a few new large organizations were formed and as existing foundations increased to over \$50 million in asset size.

Comparisons of the different size classes of foundations are discussed throughout this article. The following classifications apply throughout, unless otherwise indicated: the "smallest foundations" refer to the group holding less than \$100,000 in fair market value of total assets (excluding foundations that either do not report assets or that report assets equal to zero); "small foundations" refer to the group holding less than \$1 million in assets and include all the foundations in the "smallest" group; "medium-size foundations" refer to the group holding from \$1 million to less than \$50 million in assets; "large foundations" refer to the group holding \$50 million or more in assets; and, the "largest foundations" refer to the group holding \$100 million or more in assets, which are also included in the "large" group.

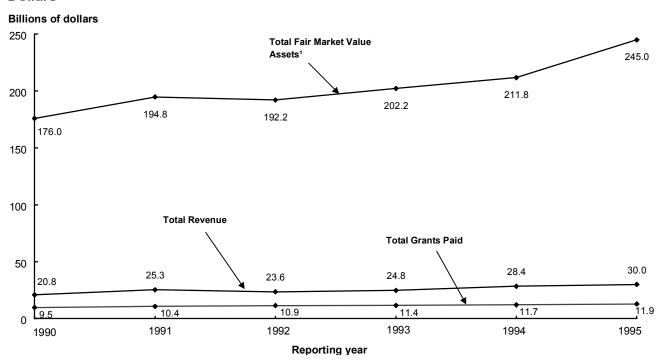

Organizational Definition and Legislative Background

A private foundation is a nonprofit, tax-exempt corporation, association, or trust, which is narrowly supported and controlled, usually by an individual, family, or corporation. It is this narrow base of support and control, which differentiates a private foundation from a publicly supported tax-exempt charitable organization, although both receive taxexempt status under section 501(c)(3) of the Internal Revenue Code [5]. The other 501(c)(3) organizations, those filing Form 990, Return of Organization Exempt From Income Tax, generally receive broad support from a large number of sources within the general public. Because of their centralized support and control, private foundations are more strictly regulated than the other section 501(c)(3) organizations. Private foundations held less than 16 percent of the book value of total assets and earned less than 5 percent of the total revenue of all section 501(c)(3) nonprofit charitable organizations that filed information returns for 1995 with the Internal Revenue Service [6].

The charitable trusts included in this article, and

Figure B

Private Foundations: Total Assets, Revenue, and Grants Paid, 1990-1995, in Constant Dollars¹

Adjustments for inflation are based on the 1992 chain-type price index for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, Volume 78, Number 8, August 1998, Table 7.1.

described in section 4947(a)(1) of the Internal Revenue Code, are not formally recognized as taxexempt organizations by the IRS. Charitable trusts represented only 5 percent of the total number of Form 990-PF filers for 1995. Unless otherwise noted, the same requirements apply to both types of Form 990-PF filers [7]. A detailed discussion and analyses of the characteristics and behavior of the charitable trusts can be found later in this article under the heading Section 4947(a)(1) Nonexempt Charitable Trusts.

The two types of private foundations or trusts, "operating" and "nonoperating," are distinguished by the type of charitable support they provide. Nonoperating foundations generally provide indirect charitable support by making grants to other nonprofit organizations that conduct charitable programs of their own [8]. Nonoperating foundations are annually required to distribute (typically through grants or related expenses) a minimum amount for

charitable purposes, the "distributable amount." If they do not distribute the required amount in the current year, they have until the end of the following year to fulfill the charitable distribution requirement without penalty. The minimum required amount is based on 5 percent of the value of their

"noncharitable-use (or net investment) assets" [9].

If an organization is sufficiently involved in the direct operation of its charitable activities, then it can qualify as an operating foundation and is exempted from the charitable distribution requirement that applies to nonoperating foundations. Although operating foundations are not subject to the annual distribution requirement, many choose to make grants in addition to carrying on charitable programs of their own. For a further explanation of the requirements of operating foundations, see Operating Foundations (and Charitable Trusts) in the Explanation of Selected Terms section.

Passage of the Tax Reform Act of 1969 (TRA69)

initiated an excise tax on foundation "net investment income." While most foundations pay the excise tax, some operating foundations are exempt from the tax. For a further explanation of exempt operating foundations, refer to Operating Foundations (and Charitable Trusts) in the Explanation of Selected Terms section. TRA69 also imposed a series of excise taxes on foundations that engaged in "prohibited activities," which were deemed not to be in the public interest. These activities applied to any foundation that attempted to influence legislation by contacting legislators, encouraged the public to contact legislators, or participated in the campaign of a candidate for public office; any foundation that engaged in certain financial transactions (or acts of "self-dealing") with "disqualified persons" having a relationship with the foundation, such as substantial donors or officers, directors, or trustees of the foundation; any foundation that owned holdings in a business enterprise deemed to be excessive or that made investments deemed to jeopardize the charitable purpose of the foundation; and any nonoperating foundation that failed to distribute the required minimum payout after a 1-year grace period. Taxes on these prohibited activities are reported on Form 4720, Return of Certain Excise Taxes on Charities and Other Persons Under Chapters 41 and 42 of the Internal Revenue Code, and are not included in this article

Of the nearly 48,000 private foundations filing Form 990-PF information returns for 1995, 92 percent were nonoperating foundations, and the remaining 8 percent were operating foundations, virtually the same percentages as for prior years. Nearly 39,700 foundations, or 83 percent of all foundations, made grants for 1995. Nearly 86 percent of nonoperating foundations and 50 percent of operating foundations made grants. Of the non-grantmaking foundations, 24 percent were operating foundations; 11 percent were nonoperating foundations that had no "distributable amount" and, therefore, were not required to make a minimum distribution (see the Explanation of Selected Terms section for a definition of the required distributable amount); 33 percent were nonoperating foundations that made other types of disbursements in order to satisfy the charitable distribution requirement; and the remaining 32 percent were nonoperating foundations that did not fully

make the required distribution for 1995 and legally had until the end of their 1996 accounting periods to do so without penalty. The types of disbursements, other than grants, made by foundations to fulfill the charitable distribution requirement include the following: operating and administrative expenses used in the conduct of charitable programs or activities; amounts paid to acquire charitable-use assets; charitable "set-asides" for future time periods; and program-related investments. All of these expenditures counted toward a foundation's charitable distribution requirement.

Foreign foundations (those foundations organized abroad) comprise less than 0.1 percent of the foundation population. A foreign foundation was required to file Form 990-PF when it received a certain degree of support from either U.S. citizens or corporations. These foundations may or may not have chosen to distribute charitable grants within the United States. The IRS requires that foreign foundations, like domestic foundations, pay an excise tax on investment income. While the excise tax equaled 2 percent of worldwide "net" investment income for the majority of domestic foundations, the tax on foreign foundations equaled 4 percent of their "gross" investment income derived from U.S. sources. The investment income on which these taxes are based does not include unrelated business income, as reported on Form 990-T, Exempt Organization Business Income Tax Return.

Ten Largest Domestic Foundations

Seventy-two percent of all foundations each held less than \$1 million in total assets. The largest foundations, those holding \$100 million or more in total assets, comprised less than 1 percent of all foundations, but held 60 percent of total foundation assets, realized half of all revenue, and distributed nearly 46 percent of total grants for 1995. In contrast, foundations holding less than \$1 million in assets held only 3 percent of total assets, realized 6 percent of total revenue, and distributed 10 percent of total grants.

The ten largest domestic foundations, displayed by asset size in Figure C, held nearly 17 percent of total foundation assets and distributed over 10 percent of total foundation grants for 1995, \$44.2 billion and \$1.3 billion, respectively [10]. This represents an 18-percent increase in assets of the ten largest

¹ Fair market value.

foundations and an 8-percent increase in grants from the previous year. The rise in assets of these foundations is consistent with the overall foundation asset increase from 1994, while the increase in the amount of grants paid is nearly double the overall rate. The huge Ford Foundation alone accounted for 3 percent of all foundation assets and grants for 1995 [11]. Nine of the ten largest foundations in terms of assets for 1995 are the same as for 1994. The David and Lucille Packard Foundation reported large increases in assets and grants for 1995 (53 percent and 48 percent, respectively), pushing it past the Robert W. Woodruff Foundation into tenth place. For the first time, each of the top ten domestic foundations held over \$2 billion in assets.

With the exception of the W. K. Kellogg Foun-

dations, whose combined assets remained virtually unchanged, each of the ten largest foundations reported increases in assets from 1994 to 1995. The largest increases were realized by the Lilly Endowment, 71 percent; the Robert Wood Johnson Foundation, 40 percent; and the Packard Foundation. Two of the top ten foundations reported a reduction in the amount of charitable grants they distributed. The J. Paul Getty Trust, which is the only operating foundation on the list, reported a 10-percent decrease in grants, while grants by the Robert Wood Johnson Foundation were down 43 percent after reporting the third highest total in 1994 [12].

Sources of Foundation Revenue

From 1994 to 1995, total revenue increased nominally 8 percent. Large foundations, which earn 58 percent of all foundation revenues, realized the greatest increase in revenues from 1994 to 1995, about 18 percent. Medium-sized foundations, those with assets between \$1 million and \$50 million, saw their revenues remain virtually unchanged in 1995. In contrast, small foundation revenues dropped by nearly 22 percent for the 1994-1995 period.

The year-to-year changes in revenue among the different size groups of foundations are better understood through an examination of the sources of revenue upon which the different groups rely. Figure D reveals that for 1995, 90 percent of total foundation revenues came from a combination of net gain from sales of assets (37 percent), contributions received (29 percent), and dividends and interest from securities (24 percent). The rest was earned from interest on savings and temporary cash investments and "other" sources. While small foundations earned nearly two-thirds of their revenues from contributions, large foundations earned only 17 percent in this manner. Similarly, while large foundations earned three-quarters of their revenues from the combination of net gains from sales of assets, and dividends and interest from securities, small foundations earned only 21 percent from these two investment sources. As in past years, the data show that as the size of the foundation increases, the proportion of revenue from contributions declines, and the proportion from investment income rises.

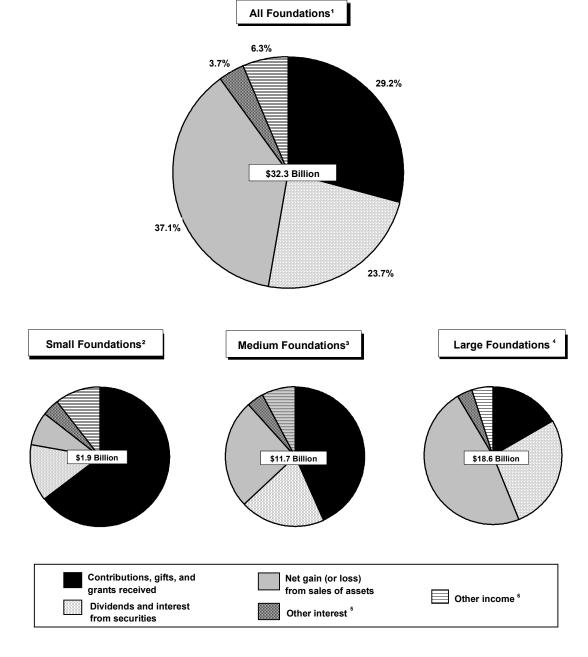

An examination of the actual number of small and large foundations receiving contributions and

² The J. Paul Getty Trust is an operating foundation. All other foundations listed are nonoperating foundations.

³ The W.K. Kellogg Foundation Trust (classified as a private foundation and not as a section 4947(a)(1) charitable trust) is located in New York and has a "pass-through" relationship with the W.K. Kellogg Foundation, located in Michigan. Typically, the entire amount of the annual qualifying (charitable) distributions of the W.K. Kellogg Foundation Trust is made in the form of a grant to the W.K. Kellogg Foundation, which then redistributes the grant for charitable purposes (and does not count the redistribution as a qualifying distribution of its own). The combined total assets of the two organizations are shown in the "Total assets" column, but, in order to avoid duplication, only the grants paid by the W.K. Kellogg Foundation are shown in the "Total grants paid" column.

Figure D

Sources of Private Foundation Revenue, by Size of Foundation, 1995

¹ Includes foundations with assets unreported or equal to zero, which are not shown separately.

NOTE: Detail may not add to totals because of rounding.

 $^{^{2}}$ Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

⁴ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁵ Represents "Interest on savings and temporary cash investments," as reported on Form 990-PF.

⁶ Includes "Gross rents and royalties" and "Gross profit (or loss) from business activities," as reported on Form 990-PF, as well as such items as imputed interest on deferred payments and program-related investment income.

earning investment income shows that the large foundations may be a somewhat more homogeneous group relative to the small foundations. Of the large foundations, nearly all, or 98 percent, earned dividends and interest from securities for 1995; 93 percent realized net gains from sales of assets; and only 39 percent received contributions. In contrast, 59 percent of the small foundations earned dividends and interest from securities for that year; only 35 percent realized net gains from sales of assets; and 47 percent received contributions. These percentages are relatively consistent with previous years.

In terms of contributions received, all three groups of foundations reported decreases for 1995. The amount of contributions made to large foundations fell 9 percent; medium foundations showed a 22-percent decline; and small foundations, the group that relies on contributions as the primary source of revenue, reported a 35-percent decrease in this area. Overall net gains from sales of foundation assets rose substantially between 1994 and 1995, led by the large and medium-size foundations. Large foundations reported \$8.9 billion from sales of these assets in 1995, an increase of 31 percent over the previous year. Foundations classified as "medium-size" saw their gains from asset sales climb 64 percent to \$2.9 billion in 1995. In contrast, small foundations reported a 6-percent decline in the amount of money gained from the sale of assets. Increases in dividends and interest from securities were reported by all three groups of foundations. Total foundation dividends and interest rose 10 percent to \$7.6 billion in 1995; with large foundations increasing 12 percent; medium foundations, 6 percent; and small foundations, 10 percent.

Three percent of private foundations reported nearly \$100 million in "unrelated business income" (UBI) for 1995. This figure accounted for less than 1 percent of total revenue as reported on the "Analysis of Income-Producing Activities" schedule of Form 990-PF. A tax was levied on the unrelated business income of foundations as it was reported on Form 990-T, Exempt Organization Business Income Tax Return [13].

The section on the "Analysis of Income-Producing Activities" categorizes total foundation revenues (with the exception of contributions) as either "unrelated business income," "excluded income," or

"related or exempt function income." Unrelated business income is income from a trade or business that was regularly carried on by the organization and that was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). Excluded income represents income that was not directly related to the tax-exempt, charitable function of the foundation and was excluded or exempted from the tax on unrelated business income by Code sections 512. 513, or 514. Generally, dividends, interest, rental income, and gains from sales of investment assets were all considered excluded income. Related or exempt function income generally represents any income earned that is related to the organization's purpose or function constituting the basis for the organization's tax exemption. The vast majority of revenue reported in the "Analysis of Income Producing Activities" section (which excludes contributions received) was reported as excluded income, 91 percent, with 8 percent reported as income (directly) related to the foundation's exempt, charitable purpose and only one-half of 1 percent reported as UBI [14].

Excise Tax on Investment Income

The excise tax on the investment income of private foundations was enacted as part of TRA69 to provide funds for Internal Revenue Service oversight of foundation activities and enforcement of laws governing their exempt status. Domestic foundations generally are liable for a tax equal to 2 percent of their net investment incomes and foreign foundations for an excise tax equal to 4 percent of their gross investment incomes. Domestic organizations compute the excise tax based on investment incomes from all sources, while foreign organizations compute the tax based on investment incomes from U.S. sources only. Some foreign foundations, classified as "exempt foreign foundations," are not subject to the charitable payout requirement, but are still required to pay the excise tax on investment incomes. These exempt foreign foundations have from the dates of their creation received at least 85 percent of their support from sources outside the United States. Due to special treaty provisions with the United States, all Canadian foundations are exempt from the

excise tax, regardless of whether or not they are considered "exempt foreign foundations." Additionally, domestic operating foundations, by meeting several requirements that show extensive public support and control, can be exempt from the excise tax on net investment income. Seventeen percent of all operating foundations were exempt from the excise tax for 1995.

One provision of the Deficit Reduction Act of 1984 allowed any domestic nonoperating foundation to reduce the annual 2-percent excise tax to 1 percent, if, simply stated, the foundation showed improvement in the rate at which it paid out charitable dollars. Specifically, if current "qualifying distributions" exceeded a 5-year average of qualifying distributions plus 1 percent of current net investment income, a foundation qualified for the reduced tax rate.

Net investment income, on which the excise tax is based, increased by 36 percent from 1994 to 1995 to \$20.4 billion. An increase of 67 percent in capital gains net income explains much of the overall gain in investment income. (For a complete definition of net investment income and a further explanation of capital gains net income and how it differs from net gain (or loss) from sales of assets, see the appropriate

entries in the Explanation of Selected Terms section.) For 1995, foundations reported excise tax on investment income of \$280.9 million. This amount was a 48-percent increase over the amount of excise tax paid in 1994. Figure E displays selected statistics on the excise tax of foundations by size of foundation. Thirty-six percent of all foundations increased the rate at which they paid out charitable dollars for 1995, thereby qualifying for the reduced 1-percent excise tax. A greater percentage of the large foundations qualified for the reduced tax compared to the small foundations, 47 percent versus 34 percent.

Foundation Assets and Investments

Assets of private foundations increased for the third straight year to \$263.4 billion. The 18-percent jump in 1995 represents the largest single-year gain in assets for the past ten years. The vast majority of foundation assets, 93 percent, are held as investments. These investments, which also increased 18 percent, totaled \$246.1 billion for 1995. Investment assets include savings and temporary cash investments; government obligations; corporate stock; corporate bonds; land, buildings, and equipment held for investment purposes; mortgage loans; and "other" investments. Non-investment assets include non-

¹ Includes 398 foundations with assets unreported or equal to zero, which are not shown separately. These foundations earned \$58.3 million in net investment income and paid excise tax of \$0.6 million.

² Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

 $^{^{4}}$ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁵ Represents net investment income of foundations reporting excise tax. Total net investment income for all foundations was \$20.4 billion.

⁶ Less than 0.5 percent.

interest-bearing cash; land, buildings, and equipment used in the direct operation of a foundation's charitable activities; various receivables; inventories held for sale or use; prepaid expenses and deferred charges; and "other" assets, which include such items as escrow deposits, interest-free or low-interest loans made for charitable purposes, and program-related investments.

Holdings of investments in securities increased by over 19 percent from 1994 to 1995. These securities, valued at \$206.6 billion for 1995, represented 84 percent of total investment assets. Nearly threequarters of all securities, or \$153.5 billion, were held in the form of corporate stock, with the remaining securities held as either corporate bonds or government obligations. Strong growth in stock markets led to a 23-percent increase in the amount of corporate stock held by private foundations. Smaller increases in government obligations and corporate bonds were reported, 12 percent and 5 percent, respectively. The other components of investment assets showed gains from 1994 to 1995 as well: savings and temporary cash investments rose 6 percent; investments in land buildings, and equipment increased 27 percent; investments in mortgage loans rose 7 percent; and "other investments," which include such items as advances, certificates of investment, and investments in art, coins, gold, and gems, increased 14 percent.

As foundations grow in size, they tend to engage in more sophisticated investment practices and hold greater proportions of investment assets, particularly corporate stock. While large foundations held 94 percent of all their assets as investments for 1995. small foundations held 86 percent as investments. Figure F displays the composition of investment assets for small, medium, and large-sized foundations. Large foundations held 86 percent of all investments as a combination of corporate stocks, corporate bonds, and government obligations, while small foundations held only 69 percent in this manner. Holdings of corporate stock, 62 percent of total investments, were the dominant investment for all foundation size groups, but particularly for large foundations. While large foundations held two-thirds of their investment assets as corporate stocks, small foundations held less than half in this manner. Small and medium-size foundations tend to hold somewhat more of their investments in government obligations

and corporate bonds compared to the larger foundations. As foundations grow in size, they also tend to hold a smaller percentage of their assets in the form of savings and temporary cash investments. For 1995, small foundations held 20 percent of their investment assets as savings and temporary cash investments, compared to 9 percent for medium-size foundations and only 4 percent for large foundations. Large foundations also tend to hold less non-interestbearing cash compared to small foundations. For 1995, small foundations held 6 percent of total assets as non-interest-bearing cash, compared to less than 1 percent for large foundations. The distribution of assets by the different size groups may generally indicate that many small foundations have less preference for risky investments and more preference for asset liquidity compared to large foundations.

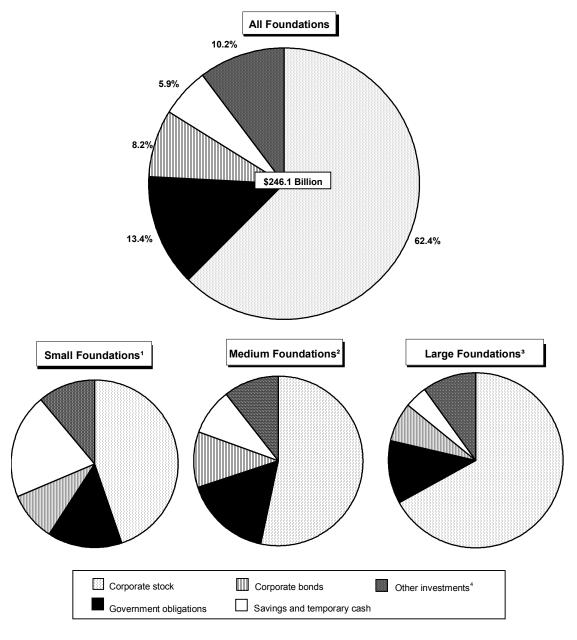

Investment Behavior by Size of Foundation

Private foundations tend to emphasize the growth of their assets (or endowments) as a means by which to fund charitable giving, both now and in the future. Unlike other nonprofit charitable organizations, nonoperating foundations of all sizes most often distribute grants in order to fulfill their charitable purposes. Although foundations have relative freedom in the way that they choose to invest their tax-exempt endowments, they are also subject to a minimum distribution or charitable payout requirement. Allowing for certain exceptions, nonoperating foundations must annually distribute for charitable purposes an amount that equals 5 percent of the average value of their net investment assets. (For an explanation and discussion of the payout requirement, see the sections beginning with Charitable Payout Requirements and Qualifying Distributions.) In order to fund charitable activity without reducing the real value of its endowment, a foundation must earn a "rate of total return on assets" (defined below) that equals at least 5 percent plus the costs of investment and the rate of inflation. To the extent that foundations wish to maintain or increase the real value of their endowments to fund charitable giving into the future, this represents an important goal.

Different sizes of foundations seem to have different charitable and investment objectives. For instance, larger foundations may tend to operate with more long-term focus. They may invest and manage

Figure F

Composition of Private Foundation Investment Assets, by Size of Foundation, 1995

¹ Small foundations are those holding from \$1 to less than \$1,000,000 in fair market value of total assets.

² Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

³ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁴ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" include such items as advances; certificates of investment; and investments in art, coins, gold, and gems. NOTE: Detail may not add to totals because of rounding.

their assets in order to maintain or increase the size of their endowments by earning income and realizing a return on assets, which will allow them both to meet the annual 5-percent payout requirement and to use any remainder to increase their investment portfolio [15]. Many larger foundations pay out close to the required 5 percent of their net investment assets to charitable causes each year. The larger foundations hold a greater proportion of assets as investments in securities, including a greater proportion as corporate stocks. Holdings of corporate stocks tend to have greater risks but also higher returns compared to other investment holdings. Larger foundations may also tend to possess the resources necessary to use sophisticated investment management services. For these reasons, larger foundations typically earn higher rates of total return on investments than smaller ones.

Many smaller foundations do not possess the resources necessary to use sophisticated investment management techniques, and they often hold lower-risk and lower-return assets than larger foundations. Moreover, they may operate with more short-term focus in order to distribute large contributions currently, so as to direct their resources to present concerns and immediate needs [16]. Smaller foundations rely much more on contributions as a source of

revenue compared to other foundations. Given this, many may act as conduits or "pass-through" organizations, receiving contributions one year and then distributing them in the same year or the next.

Income Yields and Rates of Total Return

An income yield measures the realized investment income earned by a foundation on its investment assets. Figure G shows median "net investment income yields" for nonoperating foundations for 1990 through 1995. The median yield is calculated, rather than the mean, since it minimizes the influence of large outliers in the data and, therefore, may be a better representation of the typical foundation. The net investment income (NII) yield was calculated by dividing net investment income by the end-of-year fair market value of investment assets [17]. Only nonoperating foundations were analyzed since only they are subject to the charitable payout requirement, discussed below. The use of only nonoperating foundations in the analysis here and in the sections that follow allows for comparisons of the NII yields, rates of total return, and payout rates, all discussed below.

During the period from 1990 to 1995, the median NII yields ranged between 4.9 and 7.1 percent. The total NII yield for nonoperating foundations in-

Figure G

Nonoperating Private Foundation Net Investment Income Yields, by Size of Fair Market Value of Total Assets, 1990-1995

of total assets	1990	1991	1992	1993	1994	1995
	(1)	(2)	(3)	(4)	(5)	(6)
All nonoperating foundations	7.1	6.5	5.6	5.7	4.9	5.8
Small foundations 51 under \$100,000	6.4	5.6	4.2	3.7	3.5	4.5
\$100,000 under \$1,000,000	7.3	6.5	5.6	5.7	5.0	5.7
Medium foundations						
61,000,000 under \$10,000,000	7.1	6.9	6.6	6.3	5.5	6.5
10,000,000 under \$50,000,000	7.2	6.9	7.0	7.1	6.0	6.9
Large foundations						
50,000,000 under \$100,000,000	6.7	7.3	7.2	7.5	6.4	7.2
\$100,000,000 or more	6.6	6.8	7.1	7.6	6.0	8.0

creased to 5.8 percent for 1995 after declining in most of the previous years. An examination of the yields for the different groups over the years reveals that large foundations typically earn somewhat higher NII yields than smaller foundations. Since large foundations, compared to small foundations, rely more on investment incomes as a source of revenue and may use more sophisticated investment management techniques, it is not surprising that they typically realize higher NII yields.

The rate of total return, a measurement of the total capital appreciation of the endowment of a foundation, is a more comprehensive measure of investment performance than the NII yield. Figure H shows median rates of total return on nonoperating foundation assets for 1990 to 1995. A comparison with the charitable payout rates, discussed below, helps to further understanding of the different sizes of foundations. Consistently strong rates of total return tend to lead to increased long-run giving capability. The rate-of-total-return formula used here measures the change in the value of the entire asset base with considerations for inflows and outflows of money [18]. The formula measures the realized income from assets, investments, and otherwise, as well as the unrealized appreciation or depreciation in the fair market value of assets.

Median foundation rates of total return on assets

for 1995 rebounded strongly from the very low rates of 1994, which represented the third consecutive year of decline. For 1995, the total nonoperating foundation median rate was 10.2 percent, with all but the smallest group showing very high rates of return on assets. As a rule, large foundations earn higher rates of total return than do smaller foundations. Generally, as the holdings of investment assets increase, so do the total returns on assets. Median rates for the largest nonoperating foundations increased from a rate of only 1.7 percent for 1994 to 19.8 percent for 1995, the largest median rate of return realized by foundations in recent years.

Charitable Payout Requirement and Qualifying Distributions

The following discussion of the charitable distribution requirement and the payout rate excludes operating foundations since they are not subject to the distribution requirement. Therefore, all references to foundations in this section and in the sections that follow are to nonoperating foundations, unless otherwise indicated. For reasons of comparability, operating foundations were also excluded from median net investment income yields and rates of total return, discussed previously.

Under the guidelines of the Economic Recovery Tax Act of 1981, each year nonoperating foundations

Figure H

Nonoperating Private Foundation Rates of Total Return on Assets, by Size of Fair Market Value of Total Assets, 1990-1995

Medium foundations								
\$1,000,000 under \$10,000,000	3.4	10.0	5.1	3.6	1.7	15.3		
\$10,000,000 under \$50,000,000	2.3	12.2	5.2	4.8	-0.3	17.4		
Large foundations								
\$50,000,000 under \$100,000,000	1.5	12.9	6.3	5.2	0.1	19.1		
\$100,000,000 or more	1.3	14.9	6.2	6.5	1.7	19.8		

must calculate a "distributable amount," which is the minimum amount that the organizations must distribute for charitable purposes by the end of the next full reporting year in order to avoid a penalty on undistributed charitable dollars. The distributable amount, or required payout amount, equals 5 percent of the fair market value of net investment assets (the "minimum investment return"), plus or minus certain adjustments, either allowed or required. (See Distributable (Payout) Amount, Net Investment Assets, Minimum Investment Return, and Net Adjustments to Distributable Amount in the Explanation of Selected Terms section.)

To fulfill the charitable payout requirement, nonoperating foundations can apply "qualifying distributions" from the current year, as well as any carryovers (distributions paid in excess of the minimum required amount) from the 5 previous years. The requirement can be met in either the current year or the following year. Qualifying distributions for 1995 for these nonoperating foundations are comprised primarily of contributions and grants, 88 percent; with smaller proportions for operating and administrative expenses, 9 percent; "set-asides" for future charitable distributions, 1 percent; programrelated investments (e.g., loans made to public charities at below-market or zero rates of interest), 1 percent; and amounts paid to acquire charitable-use assets (e.g., buildings, equipment, or supplies), less than 1 percent.

As mentioned previously, nonoperating foundations fulfill their exempt purposes in an indirect manner, primarily by making grants to other charitable organizations, while operating foundations generally expend their incomes for direct involvement in charitable activities and programs. Operating foundations are not subject to the same charitable payout requirement but must still expend a minimum amount each year on direct charitable support, usually through conducting their own charitable programs. These expenditures count as "qualifying distributions" toward meeting the operating foundation requirements.

For 1995, nonoperating foundations paid out \$13.7 billion in qualifying distributions against a required payout (or distributable) amount of \$9.9 billion. These figures represent increases from 1994 of 6 percent and 18 percent, respectively. In terms of

size, large foundations increased their qualifying distributions by 12 percent, while medium foundations distributed 5 percent more in 1995. Small foundations, on the other hand, reported 18 percent less in qualifying distributions that year, though still considerably more than the distributable amount.

Nearly 70 percent of foundations with a charitable payout requirement either met or exceeded the required amount for 1995 in that same year. Those that did not had until the end of the following reporting year to fulfill the requirement. While 27 percent of the small foundations did not meet the 1995 requirement during that year, thereby amassing "undistributed income," 48 percent of the large foundations chose to wait until the following reporting year to distribute their required amounts for 1995. Given that the annual payout amount is not calculated until the end of the reporting year and that it is based on the monthly average of investment assets, many foundations choose to take advantage of the 1-year tax-and penalty-free "grace period" for making required distributions. This lag time gives them an opportunity to consider their investment returns, payout rates, and contributions received, among other factors, when preparing their grantmaking budgets for the following year or years.

In contrast, while some foundations chose to wait until 1996 to disperse 1995 qualifying distributions, many gave in excess of the 1995 required amount during the 1995 Reporting Year. Small foundations typically distribute much more than their required amounts. For 1995, small foundations as a group distributed an amount of qualifying distributions that was over 250 percent more than their combined required distributable amounts. In contrast, large foundations for 1995 distributed an amount of qualifying distributions that was only 9 percent more than their combined required distributable amounts.

Contributions, gifts, and grants distributed by nonoperating foundations equaled \$12.5 billion for 1995. According to *Foundation Giving*, the largest proportions of total foundation grants for 1995 went to the areas of education, health, human services, and arts and culture [19]. The contributions and grants given by foundations accounted for only 7 percent of total philanthropic giving, with the vast majority of giving coming from individual gifts [20].

Payout Rates

Since small foundations tend to distribute more charitable dollars relative to the required amount, they also tend to have higher charitable payout rates. Figure I displays median payout rates by size of foundation for 1990 through 1995. To calculate the payout rate, the amount of (adjusted) qualifying distributions was divided by the amount of the average of net investment assets [21]. While the 1994 and 1995 median payout rates declined slightly over past years, overall foundation payout rates for all size groups remained relatively constant over the entire 6-year period.

The payout rates for large and medium-sized foundations were very close to the required 5 percent. Those of the smallest foundations, which tend to emphasize current, rather than future, charitable giving, were much higher than the required rate. Small foundations seem to focus more on distributing charitable dollars currently, rather than on long-term endowment growth. Larger foundations, on the other hand, tend to reinvest a greater portion of their returns on investments, perhaps to ensure endowment growth for future charitable giving. The trend of large foundations to give consistently at a payout rate of 5.0 percent seems to demonstrate their use of long-range planning in setting grantmaking budgets. In a survey of the payout policies of foundations, a

study found that smaller foundations tend to use their investment yields to help to structure their charitable payout rates, while larger foundations tend to structure their investment decisions in order to reduce the effect of the payout requirement on their assets [22].

Section 4947(a)(1) Nonexempt Charitable Trusts

Overview of Revenues, Assets, and Grants Paid

Charitable trusts described in Internal Revenue Code section 4947(a)(1) are organizations that have exclusively charitable interests but are not formally recognized as tax-exempt by the IRS, as are Section 501(c)(3) organizations. Charitable trusts that are not publicly supported are subject to the same requirements as foundations, including the excise tax provisions and the charitable payout requirement. Charitable trusts are typically supported and controlled by an individual or family and, like foundations, they file Form 990-PF. Most were originally formed as 4947(a)(2) split-interest trusts that at one time had one or more noncharitable beneficiaries. Additionally, the 4947(a)(1) trusts must pay an annual tax on their incomes (usually from investments) that is not distributed for charitable purposes. Trusts must report such income and tax (under Subtitle A of the IRC) on Form 1041, U.S.

Figure I

Nonoperating Private Foundation Payout Rates, by Size of Fair Market Value of Total Assets, 1990-1995

¹ Includes nonoperating foundations with assets unreported or equal to zero, which are not shown separately.

Fiduciary Income Tax Return. Statistics for charitable trusts contained in this article are based on Forms 990-PF, but not on Forms 1041.

Two other types of charitable trusts file different returns with the Internal Revenue Service and are *not* covered in this article. First, certain 4947(a)(1) charitable trusts, those that receive the majority of their support from public, rather than private, sources, file Form 990. These trusts typically operate in connection with, and provide support to, one or more public charities. Second, split-interest trusts, which have both charitable and noncharitable beneficiaries, file Form 5227, *Split-Interest Trust Information Return*.

The 2,743 section 4947(a)(1) trusts that filed Forms 990-PF for 1995 represented less than 2 percent of the total assets held, total revenue earned, and total grants distributed by all Form 990-PF filers. The number of Form 990-PF filers classified as trusts decreased by 6 percent from 1994. Ninety-nine percent of these organizations were classified as

nonoperating trusts. The vast majority of trusts, 93 percent, made charitable grants for 1995. (This compares to 83 percent for private foundations.) From 1994 to 1995, total trust revenues decreased slightly from \$425.0 million to \$411.8 million. This decrease was largely due to an 11-percent drop in net gains from sales of assets. The amount of contributions received by charitable trusts remained virtually unchanged from the previous year, while dividends and interest earned from securities increased 3 percent. Total trust assets, equal to \$3.7 billion for 1995, increased at about half the rate of assets held by private foundations, 9 percent versus 18 percent. Like private foundations, charitable trusts reported their largest asset gains in corporate stocks, 21 percent. Despite the decrease in revenues and only modest gain in assets, the amount of grants distributed by charitable trusts increased by 34 percent between 1994 and 1995, to \$222.3 million. Figure J shows total amount and percentage change for various charitable trust asset, revenue, and expense items

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" include such items as advances; certificates of investment; and investments in art, coins, gold and gems.

for 1994 and 1995.

The following classifications apply, unless otherwise indicated, to the discussion of charitable trusts throughout the remainder of this article: "small charitable trusts" refer to the group holding less than \$1 million in assets (excluding trusts that either do not report assets or that report assets equal to zero); "medium-size charitable trusts" refer to the group holding from \$1 million to less than \$10 million in assets; and "large charitable trusts" refer to the group holding \$10 million or more in assets. It should be noted that medium and large-sized trusts are much smaller on average than medium and large-sized foundations.

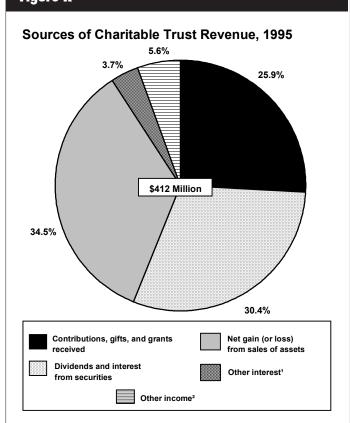

Charitable Trust Revenues and Assets

Charitable trusts earned the vast majority of their revenues from three sources in 1995: net gains from sales of assets, 35 percent; dividends and interest from securities, 30 percent; and contributions received, 26 percent as shown in Figure K. These percentages differ from the amounts reported by charitable trusts several years ago. For example, in 1990, 45 percent of trust revenues came from dividends and interest from securities, while contributions received and net gains from sales of assets each accounted for less than 15 percent. As a result of these changes, the overall trust revenue composition now more closely resembles that of private foundations.

Net investment income earned by charitable trusts totaled \$289.6 million in 1995, an increase of 5 percent over the previous year. Like foundations, most trusts are also required to pay excise tax on this net investment income. Ninety-seven percent of charitable trusts that reported net investment income paid excise tax in 1995; of these, 18 percent qualified for the reduced 1-percent tax rate, while the rest paid 2 percent.

Like foundations, charitable trusts hold the majority of their assets as investments in securities. Investments in corporate stocks, corporate bonds, and government obligations accounted for over three-quarters of trust assets in 1995, or \$2.8 billion. This amount represents a 12-percent increase over 1994. The rise in securities held by trusts was due primarily to a 20-percent increase in investments in corporate stocks, which offset the 6-percent drop in

Figure K

- ¹ Represents "Interest on savings and temporary cash investments," as reported on Form 990-PF.
- ² Includes "Gross rents and royalties" and "Gross profit (or loss) from business activities," as reported on Form 990-PF, as well as such items as imputed interest on deferred payments and program-related investment income.
 NOTE: Detail may not add to totals because of rounding.

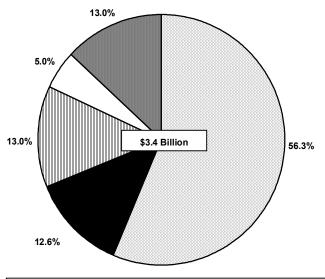

corporate bonds. In addition to securities, charitable trusts invest in savings accounts, land, buildings and equipment, mortgage loans, and "other" investments, as depicted in Figure L.

Charitable Trust Income Yields and Rates of Total Return

As in the case of foundations, the median net investment income (NII) yields and rates of total return on assets were calculated only for nonoperating trusts. Figure M displays the median NII yields for the different sizes of charitable trusts for 1990 through 1995. In each year, the median NII yield for trusts was higher than that for private foundations (see Figure G). For instance, for 1995, the median trust realized a 7.4-percent NII yield, while the median foundation realized only a 5.8-percent yield. Com-

Composition of Charitable Trust Investment Assets, 1995

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" include such items as advances; certificates of investment; and investments in art, coins, gold, and gems.
NOTE: Detail may not add to totals because of rounding.

pared to foundations, there is little difference among the different trust-size groups in terms of the extent to which they rely on investment income as a source of revenue.

Figure N displays the median rates of total return on assets for the different sizes of nonoperating trusts for 1995 and the previous 5 years. As with private foundations, the charitable trust rate of total return on assets rebounded strongly from the very low levels of 1994. For 1995, the total trust rate of return was 16.2 percent. Medium and large trusts earned higher rates of return than small ones for 1995, a pattern consistent with private foundations but previously unseen in charitable trusts.

Charitable Trust Distributions and Payout Rates

The section 4947(a)(1) charitable trusts distributed \$222.3 million in contributions, gifts, and grants for 1995, an increase of 34 percent over 1994. Most of this increase can be attributed to a single charitable trust, the Bella Mabury Trust, which reported nearly \$73 million in charitable distributions for 1995. When this trust is excluded from the calculation, total charitable trust distributions show a 10-percent decrease from 1994. Grants distributed by the trusts represented 94 percent of the total amount of qualifying distributions. Nonoperating trusts paid out \$231.7 million in qualifying distributions. Small trusts as a group distributed 9 percent more for

Figure M

Nonoperating Charitable Trust Net Investment Income Yields, by Size of Fair Market Value of Total Assets, 1990-1995

Size of fair market value	Median net investment income yields (percentages)								
of total assets	1990	1991	1992	1993	1994	1995			
	(1)	(2)	(3)	(4)	(5)	(6)			
All nonoperating trusts	7.4	7.3	7.5	7.8	6.1	7.4			
Small trusts									
\$1 under \$100,000	7.3	7.3	7.2	6.8	6.4	6.4			
\$100,000 under \$1,000,000	7.5	7.4	8.0	8.4	5.8	7.6			
Medium and large trusts									
\$1,000,000 under \$10,000,000	7.2	7.0	6.9	8.4	6.1	7.6			
\$10,000,000 or more	6.6	6.9	7.1	7.6	6.2	7.6			

Figure N

Nonoperating Charitable Trust Rates of Total Return on Assets, by Size of Fair Market Value of Total Assets, 1990-1995

Size of fair market value	Median rates of total return (percentages)								
of total assets	1990	1991	1992	1993	1994	1995			
	(1)	(2)	(3)	(4)	(5)	(6)			
All nonoperating trusts	3.4	10.5	6.4	3.1	-0.6	16.2			
Small trusts									
\$1 under \$100,000	3.2	10.3	5.7	3.1	-1.4	11.4			
\$100,000 under \$1,000,000	3.5	10.5	6.4	3.4	-0.4	16.8			
Medium and large trusts									
\$1,000,000 under \$10,000,000	3.5	10.1	6.5	2.5	3.1	17.3			
\$10,000,000 or more	3.5	11.1	4.7	3.0	-0.2	17.8			

charitable purposes than the required amount; medium trusts, which include the Mabury Trust, distributed over 80 percent more than the required amount; and large trusts 7 percent more [23]. As in the case of foundations, the discussion of the distribution requirement and payout rates excludes operating trusts because they are not subject to the same payout requirements as nonoperating trusts. The median payout rate for all sizes of charitable trusts was 5.0 percent for 1995, virtually unchanged from previous years.

Data Sources and Limitations

The statistics in this article are based on a sample of Reporting Year 1995 Forms 990-PF that were filed with the IRS. IRS required organizations having accounting periods beginning in 1995 (and therefore ending between December 1995 and November 1996) to file Form 990-PF. Some part-year returns were included in the samples for organizations that changed their accounting periods or filed initial or final returns. Sixty-four percent of the foundations in the sample had accounting periods covering Calendar Year 1995 or, in some cases, part-year periods that ended in December 1995. For charitable trusts, 57 percent filed calendar year returns. The 1995 sample was stratified based on both the size of fair market value of total assets and the type of organization (either a foundation or a 4947(a)(1)charitable trust).

Foundation returns were selected at rates that

ranged from approximately 2.8 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 14.0 to 100 percent. The 6,389 returns in the sample (5,580 foundations and 809 trusts) were drawn from an estimated population of 49,823 foundations and 2,247 trusts. The magnitude of sampling error, measured by coefficients of variation for selected items, is shown in Figure O.

The samples were designed to provide reliable estimates of total assets and total revenues. To accomplish this, 100 percent of foundation returns with fair market value assets of \$10 million or more and 100 percent of charitable trust returns with fair market value assets of \$1 million or more were

Figure 0

Coefficients of Variation for Selected Items, by Type of Organization, 1995

ltem	Private foundations	Charitable trusts
Total assets (fair market value)	1.12	3.97
Total revenue	1.18	10.31
Total expenses	2.35	18.13

included in the samples, since these were the returns that accounted for the majority of financial activity. Efforts were made to verify that organizations selected as foundations were, in fact, foundations; and that organizations selected as trusts were, in fact, trusts. The relatively small number of foundations in the sample that were incorrectly selected as trusts were ultimately reclassified as foundations (for the statistics) using identification codes from the IRS Exempt Organization Master File. However, the weights used for these organizations were based on the original sample selection classification. These same methods were used for the trusts that were incorrectly sampled as foundations.

Approximately 47 percent of all foundations, including those reclassified as foundations, reported \$10 million or more in fair market value of total assets for 1995. While these foundations were selected at a rate of 100 percent, the remaining foundation population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 2.8 percent for returns with assets zero, unreported, or less than \$125,000; 3.8 percent for returns with assets of \$125,000 to less than \$400,000; 6.8 percent for returns with assets of \$400,000 to less than \$1 million; 8.8 percent for returns with assets of \$1 million; and 19.5 percent for returns with assets of \$2.5 million to less than \$10 million.

Approximately 5 percent of all 4947(a)(1) charitable trusts in the sample reported \$1 million or more in fair market value of total assets for 1995. While these trusts were selected at a rate of 100 percent, the remaining trust population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 14.0 percent for returns with assets zero, unreported, or less than \$100,000; and 23.3 percent for returns with assets of \$100,000 to less than \$1 million.

The population from which the 1995 sample was drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1995 and 1996. Some of the records designated were for organizations that were deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations whose returns were not yet filed or were otherwise unavailable for the statistics, data were

estimated using other returns having similar characteristics. For the unavailable active trust returns, which were smaller in size than those for foundations, prior-year data of those trusts were substituted in most instances.

The data presented were obtained from returns as originally filed with IRS. The data were subject to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original returns as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base. A general discussion of the reliability of estimates based on samples, methods for evaluating both the magnitude of sampling and non-sampling error, and the precision of sample estimates can be found in the general Appendix to this issue of the *SOI Bulletin*.

Explanation of Selected Terms

The following explanations describe terms as they applied to both private foundations and charitable trusts for 1995. Unless otherwise indicated, all references to foundations also apply to trusts.

Adjusted Net Income.—In general, this was the amount by which a private foundation's gross income exceeded the expenses associated with earning the income. Included were all amounts derived from, or connected with, property held by the foundation, such as net short-term capital gain, ordinary investment income (dividends, interest, rents, and royalties), and income from amounts set aside for future charitable use, from all charitable functions, or from unrelated trade or business activities. Excluded were contributions received and long-term capital gains. Long-term capital losses could be reported as "other expenses" for the calculation of adjusted net income. This item is primarily used to determine if an operating foundation met the required "income test." This test demonstrates if the operating foundation spent the vast majority of its investment income on the direct, active conduct of tax-exempt charitable activities. See Operating Foundations and Trusts in this section. This item was reported on Form 990-PF, Part I, line 27c, column (c).

Assets Zero or Unreported.—Included in this asset-size category were: (1) final returns of liquidating or dissolving foundations that had disposed of

all assets; (2) returns of those foundations reporting zero end-of-year assets that had apparently distributed (or disposed of) all assets and income received during the year; and (3) returns of those foundations that did not report assets. A liquidating or dissolving foundation usually passes its assets on to another foundation or to a public charity.

Capital Gains Net Income.—This was the amount of net gains from sales or dispositions of property used for investment purposes (property used for charitable purposes was excluded). Capital losses from the sale or other disposition of property could be subtracted from capital gains only to the extent of such gains. Capital gains net income was used in the computation of "net investment income" (on which an excise tax generally had to be paid). In contrast, net gain (or loss) per books from the sale of all assets (other than inventory), including those used for both investment and charitable purposes, was reported as "net gain (or loss) from the sale of assets" on Form 990-PF, Part I, line 6, column (a). This item, capital gains net income, was reported on Form 990-PF, Part I, line 7, column (b).

Charitable Trust.—A charitable trust, also referred to as a "nonexempt" charitable trust, was defined in Internal Revenue Code section 4947(a)(1) as an organization that: (1) is not considered tax-exempt under section 501(a); (2) has exclusively charitable interests; and (3) has amounts in trust for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the excise tax provisions that apply to private foundations and are required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in these statistics.) Nonexempt charitable trusts that are treated as private foundations must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Fiduciary Income Tax *Return.* Data from this form are not included in the statistics of this article.

Disbursements for Exempt Purposes.—These deductions comprised the largest component of "qualifying distributions" and included grants paid,

operating expenses, and necessary and reasonable administrative expenditures for activities that were directly related to the tax-exempt purposes of the foundation. These amounts were determined solely on the basis of the cash receipts and disbursements method of accounting, as required by law and regulations. This item was reported on Form 990-PF, Part I, line 26, column (d).

Distributable (Payout) Amount.—This was the minimum payout amount required to be distributed by nonoperating foundations by the end of the year following the year for which the return was filed. Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of net investment assets, called the "minimum investment return," minus the excise tax on net investment income and the income tax under subtitle A, plus or minus other adjustments, either allowed or required (see Net Adjustments to Distributable Amount in this section).

Excess Distributions Carryover.—This was the amount distributed, after fulfilling the charitable payout requirement, that equaled the excess of qualifying distributions for 1995 over the distributable amount. If necessary, excess amounts from the current year could be carried forward to be applied to the distributable amount for the 5 following years. This item was reported on Form 990-PF, Part XIII, line 9

Grantmaking Foundations (and Charitable Trusts).—For the statistics in this article, grantmaking foundations and trusts are those organizations that reported \$1 or more in contributions, gifts, and grants paid for charitable purposes on Form 990-PF, Part I, line 25, column (d).

Inventories.—Included was the value of materials, goods, and supplies purchased or manufactured by the organization and held for sale or use in some future period. This item was reported on Form 990-PF, Part II, line 8, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Charitable-Use.—This represented either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment not held for investment purposes and used by the organization in con-

ducting its charitable activities. This item was reported on Form 990-PF, Part II, line 14, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Investment-Use.—This represented either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment held for investment purposes, such as rental properties. This item was reported on Form 990-PF, Part II, line 11, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Minimum Investment Return.—This was the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire these assets and the cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount." This item was reported on Form 990-PF, Part X, line 6.

Net Adjustments to Distributable Amount.— Adjustments that increased the "distributable amount" consisted of increases attributable to the income portion (as distinct from the principal portion) of distributions from split-interest trusts on amounts placed in trust after May 26, 1969. (A split-interest trust is one not exempt from tax and not all of whose interests are devoted to charitable, religious, educational, and like purposes, but that has amounts in trust for which a charitable contribution deduction was allowed. These organizations file Form 5227, Split-Interest Trust Information Return.) Recoveries of amounts previously treated as qualifying distributions also had to be added back to the distributable amount. Adjustments that decreased the distributable amount were the result of income required to be accumulated by the terms of an organization's governing instrument. These adjustments were allowed only for foundations or trusts organized before May 27, 1969, whose governing instruments continued to require such accumulation, since State Courts would not allow the organizations to change their governing instruments. These items were reported on Form 990-PF, Part XI, lines 4a, 4b, and 6.

Net Gain (or Loss) from Sales of Assets.—Included were profits and losses from sales of such items as securities, land, buildings, or equipment.

Gain or loss reflected the amount shown on the books of the foundation and included any amount from the sale of property used for either investment or tax-exempt charitable purposes. Most of the gain or loss was from sales of stocks and bonds. Profit or loss from sales of inventory items was included in gross profit (loss) from business activities. This item was reported on Form 990-PF, Part I, line 6, column (a).

Net Investment Assets (Noncharitable-Use Assets).—For purposes of calculating the "minimum" investment return," only the average, rather than end-of-year, fair market value of assets that were not used or held for use for charitable purposes entered into the computation. An asset was considered an investment asset if it was not used in carrying out a charitable, educational, or other similar function that gave rise to the tax-exempt status of the foundation. Examples include the fair market value of securities and rental property owned by the foundation for investment purposes. The asset amounts included on the balance sheet in Part II of Form 990-PF included both investment and charitable-use assets. This item, which was reported on Form 990-PF, Part X, line 5, is not shown separately in the tables of this article. However, "minimum investment return," which is based on net investment assets, is shown in the tables.

Net Investment Income.—This was the amount by which the sum of gross investment income plus capital gain net income exceeded allowable deductions. Included in investment income were interest, dividends, capital gains net income, rents, payments with respect to securities loans, and royalties. Excluded was any investment income derived from unrelated trade or business activities subject to the "unrelated business income" tax reported on Form 990-T, Exempt Organization Business Income Tax Return. This item was reported on Form 990-PF, Part I, line 27b, column (b).

Nonoperating Foundations (and Charitable Trusts).—These were organizations that generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to operating foundations and trusts that engaged in charitable activities themselves. However, some nonoperating foundations and trusts were actively

involved in charitable programs of their own, in addition to making grants. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period. An organization's status as a nonoperating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Operating Foundations (and Charitable Trusts).—These organizations generally expended their incomes for direct, active involvement in a tax-exempt activity, such as operating a library or museum or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for a particular taxable year, the foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test."

To meet the income test, a foundation or trust had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). Simply put, to meet the assets test, a foundation or trust had to use directly 65 percent or more of its assets for the active conduct of charitable activities. To meet the endowment test, a foundation or trust had to regularly make distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." To meet the support test, a foundation or trust had to regularly receive substantially all of its support (other than from gross investment income) from the public or from five or more qualifying exempt organizations; and (a) no more than 25 percent of its support (other than from gross investment income) from any one such qualifying exempt organization; and (b) no more than 50 percent of its support from gross investment income.

Distributions made by a private nonoperating foundation or trust to an operating foundation or trust qualified toward meeting the nonoperating organization's distribution requirement. (Distributions made by one nonoperating foundation or trust to another were subject to a number of conditions

and restrictions requiring a "pass-through" of the distribution, whereby the donor organization received credit for a qualifying distribution but the donee organization did not.) Additionally, contributions to operating foundations or trusts were deductible on the donors' individual income tax returns, up to 50 percent of their "adjusted gross incomes" (as opposed to 30 percent for contributions to nonoperating foundations).

While most operating foundations paid the excise tax on net investment income, 17 percent of operating foundations were considered exempt from this tax for 1995 under section 4940(d)(2) of the Internal Revenue Code. In order to be exempt, an operating foundation was required to meet the following requirements in any given year: (1) maintain public support for a minimum of 10 taxable years; (2) maintain a governing body at all times that is broadly representative of the general public and comprised of no more than 25-percent disqualified individuals; and (3) at no time during the year include a disqualified individual as an officer of the foundation. An organization's status as an operating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Other Assets.—Assets reported as "other" included: (1) those assets not allocable to a specific asset item on Form 990-PF balance sheet or not included elsewhere on the return; and (2) certain amounts given special treatment in the course of statistical processing. The first category included such items as construction reserve land, dividends receivable, escrow deposits, income tax refunds, interest discounts, interest-free loans, overdraft protection, and program-related investments. The second category included atypical amounts reported by the return filer as "negative liabilities." These items were reported on Form 990-PF, Part II, line 15, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c) end-of-year fair market value.

Other Investments.—Investments reported as "other" included such items as advances, bank certificates, cash values of life insurance, certificates of investment, miscellaneous loan income, patronage dividends, and investments in art, coins, gold, and gems. These items were reported on Form 990-PF, Part II, line 13, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c)

end-of-year fair market value.

Private Foundation.—A private foundation was defined in Internal Revenue Code section 501(c)(3) as a nonprofit organization with a narrow source of funds that operated or supported educational, scientific, charitable, religious, and other programs dedicated to improving the general welfare of society. A private foundation qualified for tax-exempt status under Code section 501(c)(3) but was not (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization operated by, or in connection with, any of the above described organizations; or (4) an organization that conducted tests for public safety. The primary difference between a private foundation and a public charity was the sources of the organization's funding. A foundation typically received its funds from an individual. family, or corporation, while a public charity primarily received its funds from a large number of sources within the general public.

Qualifying Distributions.—Qualifying distributions included disbursements for charitable purposes (grants, direct expenditures to accomplish charitable purposes, and charitable-purpose operating and administrative expenses); amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation or trust's obligation to pay out its "distributable amount." This item was reported on Form 990-PF, Part XII, line 4.

Set-Asides.—Amounts set-aside for specific charitable purposes can be treated as qualifying distributions only if the foundation establishes to the satisfaction of the IRS that the amount will be paid for the specific project within 60 months from the date of the first set-aside and if the foundation meets either the suitability test or the cash distribution test. To meet the suitability test, a foundation must receive prior approval from the IRS and must demonstrate that the project can be better accomplished by a set-aside than by an immediate payment of funds. To meet the cash distribution test under section 4942(g)(2)(B)(ii), a foundation must attach a schedule to its annual return showing how the require-

ments are met. The foundation must attach a schedule for the year of the set-aside and for each subsequent year until the set-aside amount has been distributed. Set-asides were reported on Form 990-PF, Part XII, lines 3a and 3b.

Total Assets.—This was the sum of all assets reported in the foundation's balance sheet, shown at both book value and fair market value. Total assets were reported on Form 990-PF, Part II, line 16, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c) end-of-year fair market value.

Total Expenses.—This was the sum of contributions, gifts, and grants paid, plus various operating and administrative expenses related to both investment and charitable-purpose activities. Total expense items were reported as shown on the books and records of the foundation and were based on either the cash receipts or the accrual method of accounting. Total expenses were reported on Form 990-PF, Part I, line 26, column (a).

Total Revenue.—This was the sum of gross contributions, gifts, and grants received; interest on savings and temporary cash investments; dividends and interest from securities; net gain (or loss) from sales of assets (mostly investment assets but also charitable-use assets); gross rents and royalties; gross profit (or loss) from business activities; and other income (such as royalty income, program-related investment income, interest earned on assets used for charitable purposes, and imputed interest on certain deferred payments). These other income items were reported on Form 990-PF, Part I, line 11, column (a). Total revenue items included both investment and charitable-use items, were reported as shown on the books and records of the foundation, and were based on either the cash receipts or the accrual method of accounting. Total revenues were reported on Form 990-PF, Part I, line 12, column (a).

Undistributed Income.—This is the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years. Sanctions were imposed in the form of excise taxes on private foundations that did not pay out an amount equal to the "distributable amount" by the end of the following tax year. This item was reported on Form 990-PF,

Part XIII, line 6f, column (d).

Unrelated Business Income (UBI).—This is an exempt organization's income from a trade or business regularly carried on by the organization and not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. A tax, as reported on Form 990-T, Exempt Organization Business Income Tax Return, was imposed on "unrelated business taxable income (UBTI)." Unrelated business taxable income is gross unrelated business income, less deductions directly connected with carrying on the trade or business, and less certain other deductions. The unrelated business income tax was determined based on the corporate or trust tax rates that were in effect for a given tax year. (Gross) unrelated business income and the associated business codes were reported on Form 990-PF, Part XVI-A, columns (a) and (b).

Notes and References

- [1] The amount of contributions, gifts, and grants paid by foundations is based on the amount that foundations actually disbursed for 1995 using the cash receipts and disbursements method of accounting.
- [2] Unless otherwise indicated, dollar amounts and percentages in the text and figures are not adjusted for inflation. However, Figure B, which presents data over a 5-year period, does present inflation-adjusted, real changes in revenues, assets, and charitable distributions. Adjustments for inflation are based on the 1992 chain-type price index for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, Volume 78, Number 8, August, 1998, Table 7.1.
- [3] The data presented in this article are from Forms 990-PF, filed for Reporting Year 1995 by organizations with accounting periods *beginning* in 1995. Therefore, the statistics include organizations with accounting periods that ended sometime during the period December 1995

- through November 1996. For a more detailed analysis, see the Data Sources and Limitations section.
- [4] U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, Volume 78, Number 8, August, 1998, Table 1.2.
- [5] For an indepth discussion of organizations other than private foundations that are tax-exempt under Internal Revenue Code section 501(c)(3), see Hilgert, Cecelia and Whitten, Melissa, "Charities and Other Tax-Exempt Organizations, 1995," in this issue.
- [6] Of the 525,134 nonprofit charitable organizations recognized by the Internal Revenue Service under section 501(c)(3), there were 180,931 Forms 990 and 990-EZ and 47,983 Forms 990-PF filed for 1995. Those not required to file included religious organizations and those with annual gross receipts of less than \$25,000.
- [7] For purposes of the analyses, "charitable trusts" refer only to the section 4947(a)(1) charitable trusts that file Form 990-PF, while "private foundations" refer to the section 501(c)(3) private foundations that file Form 990-PF.
- [8] Programs termed "charitable" refer to taxexempt activities that are charitable, educational, scientific, social, literary, or religious in nature.
- [9] The net value of noncharitable-use assets was reported on Form 990-PF, Part X, line 5. For more information, see Net Investment Assets in the Explanation of Selected Terms section.
- [10] Because Forms 990-PF, on which private foundations and charitable trusts report their financial information, are public documents, the names of individual organizations can be used in this article.
- [11] A foundation is considered domestic if it is organized in the United States; however, this does not necessarily imply that all its assets, activities, or grant recipients are domestic.

- [12] Seven of the ten largest foundations had calendar year accounting periods, meaning that all of their activity occurred during the calendar-year period. However, three of the ten had other fiscal year accounting periods. For instance, for the 1995 Reporting Year, the Ford Foundation had an accounting period ending in September 1996; the two W.K. Kellogg Foundations in August 1996; and the J. Paul Getty Trust in June 1996; therefore, much of their activity for 1995 occurred in Calendar Year 1996. See the Data Sources and Limitations section.
- [13] For more information on the unrelated business income of exempt organizations, see Riley, Margaret, "Unrelated Business Income of Nonprofit Organizations, 1994," *Statistics of Income Bulletin*, Volume 17, Number 4.
- [14] While all foundations reporting revenue (with the exception of those reporting only contributions) were required to complete the "Analysis of Income-Producing Activities" schedule of the return, only 80 percent actually did so on their returns as originally filed.
- [15] Salamon, Lester M. and Voytek, Kenneth P., Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance, Washington, DC: The Council on Foundations, 1989; and Salamon, Lester M. and Voytek, Kenneth P., Foundation Investment and Payout Performance: An Update, Washington, DC: The Council on Foundations, 1991.
- [16] Salamon and Voytek, ibid.
- [17] Net investment income is comprised of income not considered to be related to a foundation's charitable purpose, such as interest, dividends, and capital gains net income. The net investment income amount used in calculating the NII yield was obtained from column (b) of the income statement, found in Part I of Form 990-PF.
- [18] The rate-of-total-return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation

assets. See Salamon and Voytek, *Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance*, Washington, DC: The Council on Foundations, 1989, p. 32. The formula is as follows:

Rate of Total Return =

[Ending Fair Market Value of Assets

- Beginning Fair Market Value of Assets
- Contributions Received
- + Grants Paid
- + Operating and Administrative Expenses
- + Excise Tax Paid on Net Investment Income]

DIVIDED BY

[Beginning Fair Market Value of Assets + 50 percent of Contributions Received]

To calculate the rate of total return shown in Figure H, samples of private foundation information returns for consecutive years were matched in order to analyze both the beginning- and end-of-year fair market value data.

The beginning fair market value of assets for any given year equals the ending fair market value reported on the prior year's tax return. Thus, in order to provide a consistent form of measurement by which to compare rates of total return among different years, the ending fair market value of asset amounts (reported for both the year subject to the computation and the prior year) was used to compute the rate of return. In order to obtain an inflation-adjusted real rate of return, the figure equaling the beginning-of-year fair market value of assets was adjusted using the Gross Domestic Product chain-type price index (see footnote 2).

- [19] Renz, Loren; Mandler, Crystal; and Tran, Trinh, Foundation Giving: Yearbook of Facts and Figures on Private, Corporate, and Community Foundations, 1997 edition, New York: The Foundation Center, 1997, Table 60, p. 66.
- [20] *Ibid.*, pp. 57-58.
- [21] To calculate the payout rate, the amount of

(adjusted) qualifying distributions was divided by the amount of the monthly average of net investment (or noncharitable-use) assets. This payout formula adjusts qualifying distributions with additions and subtractions that are made to the required "distributable amount" on Form 990-PF. The numerator of the formula also includes excess distributions made in the past and applied to the requirement of the current filing year.

- [22] Salamon, op cit., pp. 269-270.
- [23] For 1995, the Bella Mabury Trust reported a required distributable amount of \$717,000 and qualifying distributions of \$72.8 million. It also reported revenue of \$888,000 and an excess of revenue over expenses deficit of \$72.0 million.

N/A--Not applicable

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1995 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash receipt and disbursement or the accrual method of accounting.

NOTE: Detail may not add to totals because of rounding.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Less than \$500.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that trusts actually disbursed for charitable purposes for 1995 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because trusts may use either the cash receipt and disbursement or the accrual method of accounting. NOTE: Detail may not add to totals because of rounding.

by Melissa Whitten

private foundations provided more than \$15.1 billion in contributions, gifts, and grants for 1996, an 18-percent increase over 1995. These outlays, which are generally awarded to charitable organizations, communities, or individuals, contribute to the operation of charitable programs in such areas as education, arts and humanities, health, human services, and environmental protection [1]. Foundations, which are tax-exempt under Internal Revenue Code section 501(c)(3), are required annually to file the information return, Form 990-PF. The 50,811 returns filed for 1996, including both domestic and foreign foundations, represented an increase of 6 percent from the prior year.

Total fair market value of assets for private foundations grew by 19 percent to \$312.8 billion for 1996, with investment assets, at \$291.1 billion, representing the majority of that amount. Gains of 23 percent and 10 percent, respectively, in the value of investments in corporate stock and corporate bonds contributed to the 18-percent overall increase in investment assets. Total revenue, at \$49.6 billion. grew by more than 50 percent. The substantial increase in total revenue was due, in large part, to an increase of more than 100 percent in contributions received, which totaled \$21.0 billion. This dramatic rise can be interpreted, in part, as a recovery from the uncharacteristic 20-percent decrease in contributions received for 1995. Additionally, two foundations alone, the David and Lucile Packard Foundation and the recently-founded California Endowment, reported substantial contributions which accounted for nearly three-fourths of the total [2]. Additional increases of 41 percent in net gains from sales of assets and 4 percent in dividends and interests in securities were also reported. Various financial data, including private foundation revenue, asset, and expense items for 1995 and 1996, are shown in Figure A.

Form 990-PF is also filed by nonexempt charitable trusts, as described in Internal Revenue Code section 4947(a)(1). Nearly 2,900 of these organizations filed the return for 1996, 5 percent more than 1995. Nonexempt charitable trusts filing Form 990-

PF reported fair market value of assets of \$4.6 billion, revenue totaling \$497.2 million, and distributions of \$214.4 million in contributions, gifts, and grants [3].

Statistics of Income Studies

The statistics presented in this article on both private foundations and charitable trusts are based on sample data from Form 990-PF, *Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation)*, the annual information return filed by these organizations [4]. Statistics of Income studies on private foundations have been conducted for reporting years 1974, 1979, 1982, 1983, and 1985 through 1995. Studies on 4947(a)(1) charitable trusts that are treated as private foundations have been conducted for reporting year 1979 and annually since 1989.

Private Foundations

Organizational Definitions and Legislative Background

Together, nonprofit organizations tax-exempt under Internal Revenue Code 501(c)(3), including both private foundations and publicly-supported organizations, represent more than \$1.5 trillion in total assets (book value) [5]. They contribute billions of dollars to charitable activities each year. A private foundation is distinguished from a publicly-supported charitable organization, which receives broad support from diverse sources in the general public, by its narrow sphere of support and control, which is generally limited to an individual, family, or corporation. In most cases, a foundation is organized in the form of a corporation, association, or trust, which provides some manner of charitable support or conducts charitable activities. Due to this centralization of control, foundations are subject to greater regulation than publicly-supported organizations. Therefore, for tax purposes, all organizations receiving tax-exemption are initially considered to be private foundations, required to file Form 990-PF. Organizations that meet certain requirements will then be further defined as publicly-supported or charitable, and will instead file Form 990, Return of Organization Exempt From Income Tax or Form 990-EZ, the short version of this information return. Some publicly supported exempt organizations,

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" include items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

including churches and organizations with minimal asset holdings and income, are exempted from filing any information return. See Private Foundation in the Explanation of Selected Terms section for a detailed description of the requirements for Form 990 versus Form 990-PF filers.

For 1996, private foundations represented less than one-quarter of all Forms 990-PF, 990, and 990-EZ filed. Additionally, they held 17 percent of total assets (book value) and earned 7 percent of total revenue reported [6].

Depending upon the type of charitable support that a private foundation provides, it may be classified as either "operating" or "nonoperating." An operating foundation is directly involved in the operation of its own charitable activities [7]. Examples of this type of organization include certain museums, facilities providing housing or healthcare, or organizations conducting scientific research. Although operating foundations are not legally required to distribute grants to other organizations, many choose to contribute to other nonprofit programs. A nonoperating foundation is defined as such

because it generally supports charitable programs indirectly, providing grants to other nonprofit organizations rather than operating programs of its own. These foundations, the most common Form 990-PF filers, are required to annually distribute a minimum amount for charitable purposes, which is based on 5 percent of the value of their "noncharitable-use (or net investment) assets" [8]. Those organizations that do not meet the required "distributable amount" in the current year may avoid being penalized by fulfilling the requirement by the end of the following year.

In addition to the "distributable amount" requirement, most foundations are required, under the Tax Reform Act of 1969 (TRA69), to pay an excise tax on income received only from investments, or "net investment income." Certain operating foundations are exempt from this tax. For a further explanation of exempt operating foundations, refer to Operating Foundations (and Charitable Trusts) in the Explanation of Selected Terms section. Additional excise taxes on "prohibited activities" (those which are contrary to public interest) were also imposed by TRA69. Business ventures or investments which in

² These data are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting.

some way jeopardize the foundation's charitable purpose, or acts of "self-dealing," which are defined as financial transactions with foundation officers. directors, or trustees, substantial contributors, or "other disqualified persons," are considered to be contrary to public interest and taxable under TRA69. The Act also penalizes certain political and legislative activities, such as participation by a foundation on behalf of, or in opposition to, a candidate for public office, or efforts to influence legislation by contacting (or encouraging the public to contact) legislators. Additionally, TRA69 established the tax penalty, which is imposed on any nonoperating foundation that fails to meet the required minimum payout after the 1-year grace period. Taxes on these prohibited activities are reported separately on Form 4720, Return of Certain Excise Taxes on Charities and Other Persons Under Chapters 41 and 42 of the Internal Revenue Code. For 1996, private foundations reported \$1.1 million in such taxes on Form 4720.

A Profile of the 1996 Form 990-PF Filers

Throughout this article, foundations will be discussed based on size class, as determined by the size of their end-of-year fair market value of assets. "Small foundations" refer to the group holding less than \$1 million in fair market value of total assets as of the end of the year (including foundations that either do not report assets or that report assets equal to zero), "medium-size foundations" refer to the group holding from \$1 million to less than \$50 million in assets, and large foundations refer to the group holding \$50 million or more in assets.

Small foundations accounted for 71 percent of the more than 50,800 returns filed for 1996, but held only 3 percent of assets, as shown in Figure B. In contrast, large foundations accounted for less than 2 percent of all returns filed, but accounted for 70 percent of asset holdings, with 62 percent of total assets held by those foundations with fair market value of assets of \$100 million or more. Large foundations also dominated the revenue category,

with those foundations holding \$100 million or more in fair market value of assets reporting more than half of total revenue.

As in past years, the number of nonoperating foundations far outnumbered that of operating foundations for 1996. Nonoperating foundations were represented by 91 percent of Forms 990-PF filed. with the remaining 9 percent made up of operating foundations. Grantmaking foundations filed 40,889 Forms 990-PF, or slightly more than 80 percent of all foundation returns filed, with 84 percent of nonoperating and 47 percent of operating foundations making grants. Foundations awarded \$15.1 billion dollars in contributions, gifts, and grants for 1996. According to Foundation Giving, the largest dollar amount of grants distributed for 1996 benefited the area of education, with human services and health also receiving large proportions of funding [9]. Of those nonoperating foundations that were not classified as grantmaking, 42 percent satisfied the distribution requirement through other types of charitable disbursements, including administrative and operational expenses for charitable purposes, program-related investments, acquisition of charitable-purpose assets, and charitable "set-asides" for future projects. Additionally, 13 percent reported no "distributable amount" and were, therefore, not subject to the distribution requirement (see the Explanation of Selected Terms section for a definition of the required distributable amount), and the remaining 45 percent opted to meet the 1996 requirement in their 1997 accounting periods [10].

In addition to domestic foundations, foreign organizations receiving certain degrees of support from U.S. citizens or corporations must also file Form 990-PF. Foreign foundations are those that are organized abroad; they do not necessarily choose to distribute grants within the United States. For 1996, foreign organizations accounted for less than 0.1 percent of returns filed. Like domestic foundations, organizations based in foreign countries are required to pay excise tax on their net investment income from U.S. sources. For domestic foundations, this tax equaled 2 percent of their worldwide "net" investment income; it equaled 4 percent of "gross" investment income derived from U.S. sources for foreign foundations.

Ten Largest Domestic Foundations

Forms 990-PF are available for public disclosure under Internal Revenue Code section 6104(b). Currently, a private foundation is required to publish a public notice stating that it has filed a Form 990-PF and must make the return available to the public for 180 days from the date that the notice is published. With the Tax and Trade Relief Extension Act of 1998, Congress directed that foundations furnish copies of their three most recent annual returns, as well as their original application for exempt status, to the public. Final IRS regulations incorporating these new rules are pending. Due to this public disclosure requirement, data from Form 990-PF differ from most other IRS return data, since return information for individual organizations may be published.

The largest foundations, those holding \$100 million or more in assets, held 62 percent of all assets, but accounted for fewer than 400 returns, or less than 1 percent of all foundations. Additionally, the largest organizations were responsible for 46 percent of all contributions paid. Ten foundations alone accounted for nearly one-third of the total assets held by the largest foundations, excluding those organizations organized abroad. These foundations, along with data on total assets and grants paid for 1996 are shown in Figure C. The Ford Foundation remained the largest, by asset size, of the domestic foundations for 1996, with more than \$9.5 billion in total assets and \$390.6 million in grants paid (3 percent of the total for all foundations) [11]. Overall, the total asset and grants paid amounts for the top ten domestic foundations were 25 percent and 29 percent higher, respectively, than the prior year totals.

There were several major changes in the list for 1996, the most dramatic of which was the movement of the David and Lucile Packard Foundation, which, driven by an increase in assets of more than 200 percent, rose from tenth to third on the list. This foundation, which entered the list as the tenth largest for 1995, replaced the W.K. Kellogg Foundation and W.K. Kellogg Trust as the third-largest domestic foundation for 1996. In addition, the Pew Memorial Trust dropped from the list this year, and the Robert W. Woodruff Foundation re-entered as the eighth-largest foundation, with assets increasing by 26 percent [12]. Large increases in asset holdings were

also reported by the Lilly Endowment, Inc. and the W.K. Kellogg Foundation, both of which reported increases of well over 25 percent, and the Ford Foundation, which reported a 17-percent increase.

For eight of the ten largest foundations, Reporting Year 1996 also included increases in grants paid, the largest of which were reported by the Robert W. Woodruff Foundation (249 percent), and the Robert Wood Johnson Foundation (174 percent). Reductions in grants paid were reported by the Rockefeller Foundation and by the J. Paul Getty Trust, which, again for 1996, was the second-largest of all foundations and the only operating foundation to be included in the top ten [13].

Sources of Foundation Revenue

From 1995 to 1996, total revenue for private foundations increased by 54 percent. Much of this change is attributable to marked revenue increases among the largest foundations, as those foundations holding \$100 million or more in fair market value of assets reported a 67-percent increase over 1996. Medium foundations also experienced a 36-percent rise in total revenue.

An examination of the sources of foundation revenue for 1996 provides greater insight into the substantial increase in total revenue. The majority of foundation revenue (92 percent) was gained from contributions received, dividends and interest from securities, and net gain from sales of assets. Contributions received, after dropping 20 percent for 1995, increased by 122 percent for 1996. Additionally, this item replaced net gain from sales of assets as the major source of foundation revenue, accounting for 42 percent of the total. Although net gain from sales of assets represented a smaller percentage of total revenue for 1996, the category itself experienced an increase of 41 percent from 1995. Of the three major components of revenue, dividends and interest from securities increased at the lowest rate (4 percent) and made up just 16 percent of total revenue. Figure D shows revenue sources for 1996 for all foundations, as well as by asset-size class.

As previously noted, the largest foundations contributed dramatically to the increase in revenue overall. Contributions received, the largest revenue component for 1996, rose to \$9.7 billion, an amount four times larger than the \$2.3 billion reported for 1995. Of total contributions received for 1996, more than \$4.7 billion alone were reported by the Packard Foundation, while the recently-founded California Endowment reported an additional \$1.2 billion. Medium and small foundations also recovered from 1995's drop in contributions, reporting increases of 54 percent and 47 percent, respectively.

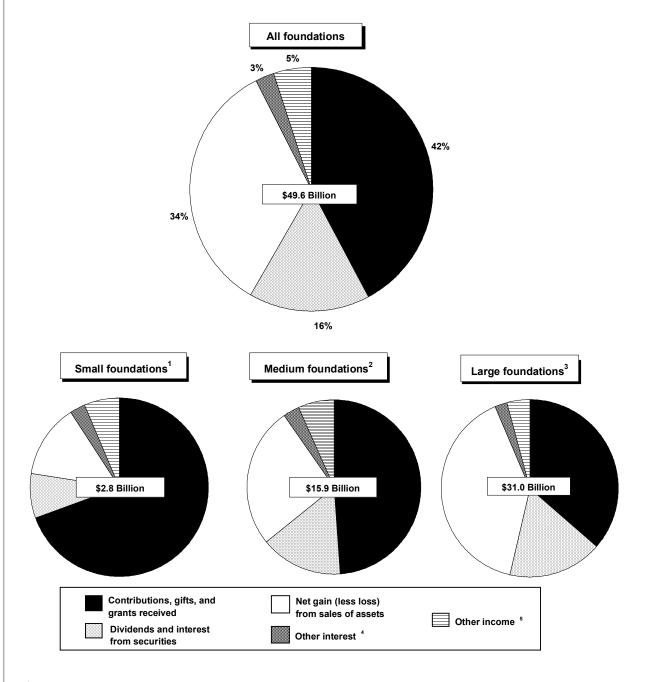

Despite the overall rise in contributions received, large foundations remained the least dependent on contributions as a source of revenue. Large foundations relied more heavily on net gain from sales of assets than any other component, receiving 40 percent of their revenue from this category. Medium and small foundations, on the other hand, both depended on contributions received as the major rev-

 $^{^{\}rm 2}$ The J. Paul Getty Trust is an operating foundation. All other organizations listed are nonoperating foundations.

³ The W.K. Kellogg Foundation Trust (classified as a private foundation and not as a section 4947(a)(1) charitable trust) is located in New York and has a "pass-through" relationship with the W.K. Kellogg Foundation, located in Michigan. Typically, the entire amount of the annual qualifying (charitable) distributions of the W.K. Kellogg Foundation Trust is made in the form of a grant to the W.K. Kellogg Foundation, which then redistributes the grant for charitable purposes (and does not count the redistribution as a qualifying distribution of its own). The combined total assets of the two organizations are shown in the "Total assets" column, but, in order to avoid duplication, only the grants paid by the W.K. Kellogg Foundation are shown in the "Total grants paid" column.

Figure D

enue source, with medium foundations reporting contributions received at 49 percent of total revenue and small foundations reporting the largest amount, 69 percent.

Excepting contributions, all foundation revenues are assigned one of three categories on the "Analysis of Income Producing Activities" schedule of Form 990-PF. "Unrelated business income" (UBI) is taxable income from a trade or business that was regularly carried on by the organization but was not substantially related to the organization's exempt purpose or function, other than to provide income to the organization. Organizations with unrelated business income must file Form 990-T, Exempt Organization Business Income Tax Return [14]. Private foundations reported \$101.4 million in unrelated business income for 1996, less than 1 percent of total revenue from the "Analysis of Income-Producing Activities" schedule of Form 990-PF. Just 4 percent of all foundations had income categorized as unrelated business income.

"Excluded income" represents income that was not directly related to the tax-exempt, charitable function of the foundation, but was exempted or excluded from the tax on unrelated business income by Code sections 512, 513, or 514. Included in this category are dividends, interest, rental income, and gains from sales of investment assets. Excluded income represented 92 percent of total income as reported on the schedule.

Income that was directly related to the function or purpose for which the organization has received tax-exemption was classified as "related or exempt function income." Nearly 8 percent of total revenue reported in this section, or \$20.2 billion dollars, was reported as exempt or excluded income.

Excise Tax on Investment Income

In accordance with TRA69, private foundations pay excise tax on their net investment income each year. This tax is approximated by the Internal Revenue Service to cover expenses incurred in the oversight of foundation activities and the enforcement of laws governing their exempt status. Generally, domestic foundations are liable to pay taxes equal to 2 percent of their worldwide net investment income; most foreign foundations compute this tax based on 4 percent of their gross investment income from U.S.

sources only. All foreign foundations, with the exception of any foundation based in Canada, are subject to the excise tax on investment income tax. Canadian foundations are exempt from this tax as a result of special treaty provisions with the United States. Of the foreign foundations that filed Form 990-PF for 1996, 39 percent were based in Canada. Domestic operating foundations that are able show extensive public support and control may also be exempt from the tax. For 1996, 15 percent of all operating foundations were categorized as exempt.

Domestic nonoperating foundations, under the Deficit Reduction Act of 1984, may be eligible for a reduction of the tax to 1 percent of net investment income, in cases where the foundation is able to show a specific degree of improvement in the rate at which it paid out charitable dollars. Specifically, if current "qualifying distributions" exceeded a 5-year average of qualifying distributions plus 1 percent of current net investment income, a foundation qualified for the reduced tax rate for 1996.

Data for foundations reporting excise tax on net investment income for 1996 are presented in Figure E. Net investment income rose to \$26.2 billion, a 29-percent increase. Foundations reported excise tax on net investment income totaling \$370.3 million, 32 percent more than for 1995. Large foundations qualified for the 1-percent reduced tax rate at a greater percentage rate than did small foundations, at 48 and 36 percent, respectively.

Foundation Assets and Investments

Total fair market value of foundation assets reached \$312.8 billion this year, a 19 percent increase from 1995. Total investments grew by 18 percent to \$291.1 billion. Foundations held the majority of their assets, 93 percent, in investments. This latter category of assets includes savings and temporary cash investments; securities (corporate stock and bonds and government obligations); land, buildings, and equipment held for investment purposes; mortgage loans; and "other investments." This category includes items such as pooled income funds, certificates of investment, and investments in art, gold, coins, or gems.

More than three-fourths of all assets (243.7 billion) were held in securities, investments in which increased 18 percent over the prior year. Corporate

stock holdings increased 23 percent and accounted for 77 percent of total investments in securities. Investments in corporate bonds increased at a rate of 10 percent, while government obligations remained virtually unchanged from 1995.

Composition of Investment Assets by Size of Foundation

Asset growth figures prominently in creating the financial basis for private foundations' charitable giving. Foundations use investment as the basis to finance their charitable giving, which is made largely in the form of grants.

Foundations may choose the manner in which they manage and invest their assets. Investments in corporate stock are considered to be high-risk, but also provide higher returns in the long run, while short-term investments, such as savings accounts or CD's, have little risk but less return. Large foundations generally invest most extensively in corporate stock and other long-term investments and relatively little in short-term investments, while small and medium foundations, while still holding large portions of assets in corporate stock, are more likely than large foundations to include short-term invest-

ments in their portfolios.

Figure F shows the composition of investment assets for all foundations and by size of foundation. Corporate stock was the major investment asset for each size category of foundation for 1996. Small foundations held slightly less than 50 percent of their investment assets in corporate stock, medium foundations held 56 percent, and large foundations held 69 percent. Savings and temporary cash investments, the category representing short-term investments, represented 20 percent of investment assets for small foundations and 4 percent for large foundations.

Income Yields and Rates of Total Return

An income yield is a measure of the realized investment income that a foundation earns on its investment assets. Figure G shows median "net investment income yields" and "rates of total return on assets" for nonoperating foundations, by asset-size class, for 1996. The median, rather than the mean, is calculated, as it minimizes the influences of large outliers in the data and may, therefore, better represent a typical foundation. The net investment income (NII) yield was calculated by dividing net investment

² Small foundations are those holding from zero to less than \$1,000,000 in fair market value of total assets.

³ Medium foundations are those holding from \$1,000,000 to less than \$50,000,000 in fair market value of total assets.

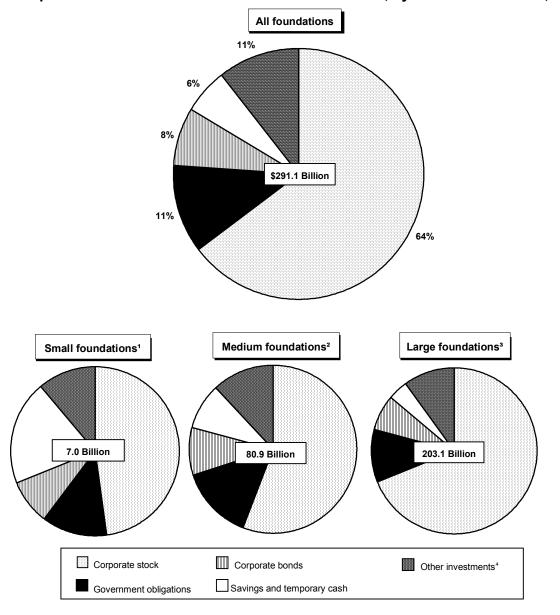

⁴ Large foundations are those holding \$50,000,000 or more in fair market value of total assets.

⁵ Represents net investment income of foundations reporting excise tax. Total net investment income for all foundations was \$26.2 billion.

⁶ Less than 0.5 percent.

⁴ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

Figure G

Nonoperating Foundation Net Investment Income Yields and Rates of Total Return on Assets, by Size of Fair Market Value of Assets, 1996

Size of fair market value of total assets	Median net investment income yields (percentages)	Median rates of total return on assets (percentages)
All nonoperating foundations	5.9	7.0
Small foundations		
Less than \$100,000	4.6	1.3
\$100,000 under \$1,000,000	5.8	7.8
Medium foundations		
\$1,000,000 under \$10,000,000	6.5	11.8
\$10,000,000 under \$50,000,000	7.3	13.3
Large foundations		
\$50,000,000 under \$100,000,000	8.7	13.9
\$100,000,000 or more	9.4	14.8

income by the end-of-year fair market value of investment assets [15]. These data are presented for nonoperating foundations, as only they are subject to the charitable payout requirement, discussed below. As in previous years, large foundations earned higher income yields for 1996 than other size classes, while small foundations earned much smaller yields on net income. This may indicate that large foundations typically invest in higher-risk investment assets with the potential for greater return, while smaller foundations invest more cautiously, perhaps because they have fewer resources to expend on investment management.

Further insight into foundation investment return can be gained by examining data for the rate of total return on assets. This measure, which represents the total capital appreciation of the endowment of a foundation, is a more comprehensive indication of total investment performance than the NII yield. The rate-of-total-return formula used here measures the change in the value of the entire asset base with consideration for inflows and outflows of money [16]. It measures the realized income from investments and other assets, as well as the unrealized appreciation or depreciation in the fair market value

of assets. Like net investment income yields, rates of total return generally increase with foundation size, indicating that rates of return on assets increase as asset holdings grow. After a significant increase for 1995, rates of total return fell slightly for 1996 for every asset-size class. Despite the decrease, the medians remained much higher than those for years prior to 1995 [17].

Charitable Payout Requirement and Qualifying Distributions

The charitable payout requirement applies to nonoperating foundations only and refers to the requirement, under the Economic Recovery Tax Act of 1981, that these foundations distribute a specific amount annually for charitable purposes.

Each year, nonoperating foundations must calculate a "distributable amount," based on the fair market value of their investment assets, which must be distributed by the end of the next reporting year in order to avoid a tax penalty. The distributable amount, or required payout amount, equals 5 percent of the fair market value of the organization's net investment assets (the "minimum investment return"), plus or minus certain adjustments, either allowed or required. (See Distributable (Payout) Amount, Net Investment Assets, Minimum Investment Return, and Net Adjustments to Distributable Amount in the Explanation of Selected Terms section.)

The requirement may be fulfilled by a combination of "qualifying distributions" from the current year and carryovers (distributions paid in excess of the minimum required amount) from the previous 5 years. Qualifying distributions for 1996 consisted primarily of contributions and grants (92 percent), with smaller proportions for operating and administrative expenses (5 percent), "set-asides" for future charitable distributions (1 percent), program-related investments (e.g., buildings, equipment, or supplies) (1 percent), and amounts paid to acquire charitable-use assets (e.g., buildings, equipment, or supplies) (1 percent).

Qualifying distributions for nonoperating foundations totaled \$16.0 billion for 1996, a 17-percent increase from 1995 and outpaced the required distributable amount, which rose by 13 percent to \$11.2 billion. Large foundations increased their qualifying distributions by 20 percent, medium foundations by 13

percent, and small foundations by 19 percent.

Of those foundations with a minimum payout requirement, 67 percent met or exceeded the requirement for 1996 in that reporting year. Those foundations that did not meet this requirement had until the end of the following reporting year to distribute the remaining amount. As the annual payout amount is not calculated until the end of the reporting year and is based on the monthly average of investment assets, many foundations choose to take advantage of the 1-year tax-and-penalty-free "grace period" for making these distributions. Just under half of all large foundations chose to wait until the following year to fulfill the requirement; 42 percent of medium and 29 percent of small foundations also elected to meet the distribution requirement in Reporting Year 1997.

While some foundations do not meet the distribution requirement for a given reporting year and choose to make those distributions in the following year, others make distributions which far surpass the required amount. Small foundations generally make distributions well over the requirement, and distributed nearly 400 percent more than their required amounts for 1996. Large foundations, on the other hand, exceeded the requirement by just 14 percent.

Operating foundations, although not subject to the same charitable payout requirement as nonoperating foundations, are required to expend a minimum amount annually on the direct operation of their charitable activities and programs. These expenditures count as "qualifying distributions" toward meeting the operating foundation requirements.

Payout Rates

To better analyze the rates at which foundations fulfill the charitable payout requirement, the actual payout rates must be examined. To calculate the payout rate, the amount of (adjusted) qualifying distributions is divided by the amount of the average of net investment assets [18]. Median payout rates for 1996, by size of foundations, are displayed in Figure H.

For medium and large foundations, payout rates were at or just above the required 5 percent. Small foundations, which generally concentrate their efforts on current rather than long-term charitable giving, exceeded the required amount. The smallest foundations, in fact, distributed at more than twice the required rate.

Figure H

Nonoperating Private Foundation Payout Rates, by Size of Fair Market Value of Total Assets, 1996

	Median
Size of fair market value	payout
of total assets	rates
	(percentages)
All nonoperating foundations	5.7
Small foundations	
Less than \$100,000	11.7
\$100,000 under \$1,000,000	5.5
Medium foundations	
\$1,000,000 under \$10,000,000	5.1
\$10,000,000 under \$50,000,000	5.0
Large foundations	
\$50,000,000 under \$100,000,000	5.0
\$100,000,000 or more	5.0

Section 4947(a)(1) Nonexempt Charitable Trusts

Definition and Overview

Unlike Section 501(c)(3) organizations such as private foundations, charitable trusts described under Internal Revenue Code section 4947(a)(1) are not formally recognized by the Internal Revenue Service as tax-exempt. These organizations resemble private foundations in that they have exclusively charitable purposes, have narrow bases of support and control, and are required to file Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation). Generally, these types of organizations are supported and controlled by an individual or family. Any income which is not distributed for charitable purposes is annually subject to tax and is reported on Form 1041, Fiduciary Income Tax Return, for which no data are included in this article.

Also not covered in this article are publicly-supported 4947(a)(1) charitable trusts and split-interest trusts. Publicly-supported 4947(a)(1) charitable trusts, those which receive the majority of their support from public (rather than private) sources, file Form 990, *Return of Organization Exempt From Income Tax*. These trusts typically operate in con-

nection with, and provide support to, one or more public charities. Organizations known as split-interest trusts, which have both charitable and noncharitable beneficiaries, complete Form 5227, *Split-Interest Trust Information*.

Section 4947(a) charitable trusts represent 5 percent of Forms 990-PF filed for 1996. The 2,891 returns filed for these organizations are 5 percent more than for 1995. They comprise less than 2 percent of total assets, grants paid, and revenue for Form 990-PF filers again this year. Data on the number of returns filed, as well as asset, revenue, and expense items for 1995 and 1996, are shown in Figure I. Among these organizations, 99 percent were classified as nonoperating and 92 percent as grantmaking.

The following classifications apply, unless otherwise indicated, to the discussion of charitable trusts throughout the remainder of this article: "small charitable trusts" refer to the group holding less than \$1 million in assets (including trusts that either do not report assets or that report assets equal to zero); "medium-size charitable trusts" refer to the group

holding from \$1 million to less than \$10 million in assets, and "large charitable trusts" refer to the group holding \$10 million or more in assets. Medium and large-sized trusts are, on average, much smaller than foundations in those size groups.

Charitable Trusts Revenue and Assets

Total revenue reached \$497.2 million for charitable trusts in 1996, a 21-percent increase from the prior year. Contributions received, net gain from sale of assets, and dividends and interest from securities comprised 89 percent of that amount. Significant increases of 50 percent in net gain from sales of assets and 19 percent in dividends and interest from securities offset a 26-percent decrease in contributions, gifts, and grants received for 1996, as compared to 1995.

Net gain from sales of assets, at 42 percent, was again the leading component of revenue for charitable trusts, as shown in Figure J. Smaller proportions of revenue included dividends and interest from securities (30 percent) and contributions received (16 percent).

Figure I

IRC Section 4947(a)(1) Charitable Trusts Treated as Foundations: Selected Financial Items and Percentage Changes, 1995-1996

[Money amounts are in millions of dollars]

ltem	1995	1996	Percentage change, 1995-1996
	(1)	(2)	(3)
Number of trusts	2,743	2,891	5.4
Total assets (fair market value)	3,676.1	4,565.7	24.2
Investments, total	3,382.2	4,330.8	28.0
Savings and temporary cash investments	170.1	216.2	27.1
Investments in securities, total	2,771.4	3,372.0	21.7
U.S. and State Government obligations	441.2	462.5	4.8
Corporate stock	1,903.3	2,359.8	24.0
Corporate bonds	426.9	549.7	28.8
Other investments ¹	440.7	742.6	68.5
Total revenue	411.8	497.2	20.7
Contributions, gifts, and grants received	106.5	78.7	-26.1
Net gain (or loss) from sales of assets	142.1	212.9	49.8
Dividends and interest from securities	125.1	148.4	18.6
Total expenses	262.0	269.7	2.9
Contributions, gifts, and grants paid ²	222.3	214.4	-3.5

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on the Form 990-PF. "Other investments" include items such as advances; certificates of investment; industrial development bonds; and investments in art, coins, gold and gems.

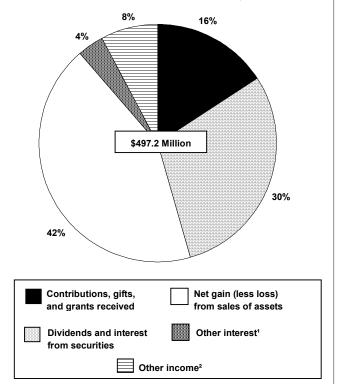

² These data are based on the amount of contributions, gifts, and grants that charitable trusts actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting.

Net investment income totaling \$397.3 million was reported for 1996. Like foundations, most charitable trusts are required to pay an excise tax on their net investment income. For 1996, \$6.6 million in excise tax were reported by charitable trusts filing Form 990-PF. Of the charitable trusts that paid this tax, 24 percent qualified for the reduced rate of 1 percent, while the remainder paid tax on 2 percent of investment income.

For 1996, assets held by charitable trusts totaled \$4.6 billion, a 24-percent increase from 1995. Small charitable trusts, which accounted for 70 percent of returns filed, represented only 12 percent of total asset holdings. In contrast, 37 percent of total asset holdings were reported by large trusts, which represented 2 percent of these organizations.

Figure J

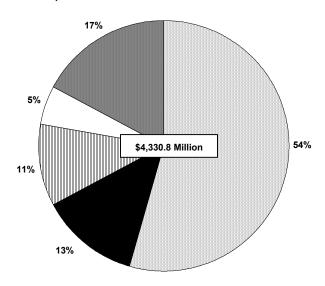

Sources of Charitable Trust Revenue, 1996

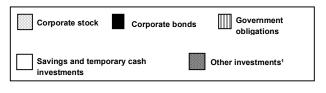

¹ Represents "Interest on savings and temporary cash investments," as reported on Form 990-PF.

Figure K

Composition of Charitable Trust Investment Assets, 1996

¹ Sum of "Investments in land, buildings, and equipment (less accumulated depreciation)," "Investments in mortgage loans," and "Other investments," as reported on Form 990-PF. "Other investments" includes items such as advances; certificates of investment; and investments in art, coins, gold, and gems.

Like private foundations, charitable trusts hold the majority of assets as investments. More than 90 percent of charitable trust assets were held as investments for 1996, the majority of which were investments in securities. The composition of charitable trust investment assets is shown in Figure K. Holdings in corporate stock, which increased 24 percent from 1995, represented 54 percent of total investment holdings. "Other investments," include investments in land, buildings, and equipment, investments in mortgage loans, advances, certificates of investments, industrial development bonds, and investments such as art or coins. This category, at 17 percent, constituted the second-largest component of charitable trust investment assets.

² Includes "Gross rents and royalties" and "Gross profit (or loss) from business activities" as reported on Form 990-PF, as well as items such as imputed interest on deferred payments and program-related investment income.

Charitable Trust Distributions and Payout Rates

There were \$214.4 million in contributions, gifts, and grants paid by section 4947(a)(1) trusts for 1996, 4 percent less than for 1995. Nonoperating charitable trusts paid out \$225.8 million in qualifying distributions, 95 percent of which was made up of grants. Small charitable trusts distributed 87 percent more than required distributions; medium trusts, 8 percent more, while large trusts' qualifying distributions fell to 8 percent less than the required amount.

Data Sources and Limitations

The statistics in this article are based on a sample of Reporting Year 1996 Forms 990-PF that were filed with the IRS. Organizations having accounting periods beginning in 1996 (and therefore ending between December 1996 and November 1997) were required by IRS to file a Form 990-PF. Some partyear returns were included in the samples for organizations that changed their accounting periods, or filed initial or final returns. Some 64 percent of the foundations in the sample had accounting periods covering Calendar Year 1996 or, in some cases, partyear periods that ended in December 1996. For charitable trusts, 58 percent filed calendar year returns. The 1996 sample was stratified based on both the size of fair market value of total assets and the type of organization (either a foundation or a 4947(a)(1) charitable trust).

Foundation returns were selected at rates that ranged from approximately 2.7 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large amounts of assets). Charitable trust returns were selected at rates that ranged from 14.0 percent to 100 percent. The 7,552 returns in the sample (6,261 foundations and 1,291 trusts) were drawn from an estimated population of 52,297 foundations and 3,018 trusts. The magnitude of sampling error, measured by coefficients of variation for selected items, is shown in Figure L.

The samples were designed to provide reliable estimates of total assets and total revenue. To accomplish this, 100 percent of foundation returns with fair market asset value of \$10 million or more and 100 percent of charitable trust returns with fair market asset value of \$1 million or more were included in the samples, since these were the returns that accounted for the majority of financial activity. The

Figure L

Coefficients of Variation for Selected Items, by Type of Organization, 1996

Item	Private	Charitable
nem	foundations	trusts
	Coefficients of vari	ation (percentages)
Total assets (fair market value)	0.89	3.24
Total revenue	1.29	4.27
Total expenses	1.52	7.56

populations and sample rates and sizes for each asset-size class are shown in Figure M. Efforts were made to verify that organizations selected for the sample were properly classified as foundations or trusts. The relatively small number of foundations in the sample that were incorrectly selected as trusts were ultimately reclassified as foundations (for the statistics) using identification codes from the IRS Exempt Organization Master File. However, the

N/A--Not applicable

weights used for these organizations were based on the original sample selection classification. These same methods were used for the trusts that were incorrectly sampled as foundations.

Approximately 6 percent of all foundations, including those reclassified as foundations, reported \$10 million or more in fair market value of total assets for 1996. While these foundations were selected at a rate of 100 percent, the remaining foundation population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 2.7 percent for returns with assets zero, unreported, or less than \$125,000; 3.9 percent for returns with assets of \$125,000 to less than \$400,000; 6.7 percent for returns with assets of \$400,000 to less than \$1 million; 9.4 percent for returns with assets of \$1 million; and 19.1 percent for returns with assets of \$2.5 million to less than \$10 million.

Approximately 29 percent of all 4947(a)(1) charitable trusts in the sample reported \$1 million or more in fair market value of total assets for 1996. While these trusts were selected at a rate of 100 percent, the remaining trust population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 14.6 percent for returns with assets zero, unreported, or less than \$100,000; and 22.7 percent for returns with assets of \$100,000 to less than \$1 million.

The population from which the 1996 sample was drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1996 and 1997. Some of the records designated were for organizations that were deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations whose returns were not yet filed or were otherwise unavailable for the statistics, data were estimated using other returns having similar characteristics. All data for returns filed by the top ten foundations are actual. For the unavailable active trust returns, which were smaller in size than those for foundations, prior-year data of those trusts were in most instances used as a substitute.

The data presented were obtained from returns as originally filed with IRS. The data were subject to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In

most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated. A general discussion of the reliability of estimates based on samples, methods for evaluating both the magnitude of sampling and non-sampling error, and the precision of sample estimates can be found in the general Appendix to this issue of the *SOI Bulletin*.

Explanation of Selected Terms

The following explanations describe terms as they applied to both private foundations and charitable trusts for 1996. Unless otherwise indicated, all references to foundations also apply to trusts.

Adjusted Net Income—In general, this is the amount by which a private foundation's gross income exceeded the expenses associated with earning the income. Amounts derived from, or connected with, property held by the foundation, such as net short-term capital gain, ordinary investment income (dividends, interest, rents, and royalties), and income from amounts set aside for future charitable use, from all charitable functions, or from unrelated trade or business activities were included in this calculation. Excluded items were contributions received and long-term capital gains. Long-term capital losses could be reported as "other expenses" for the calculation of adjusted net income. This item is primarily used to determine if an operating foundation met the required "income test." This test is used to determine whether the operating foundation spent the vast majority of its investment income on the direct, active conduct of tax-exempt charitable activities. See Operating Foundations and Trusts in this section. This item was reported on Form 990-PF, Part I, line 27c, column (c).

Assets Zero or Unreported—This asset-size category included: (1) final returns of liquidating or dissolving foundations that had disposed of all assets; (2) returns of those foundations reporting zero end-of-year assets that had apparently distributed (or disposed of) all assets and income received during the year; and (3) returns of those foundations that did not report assets. A liquidating or dissolving foundation usually passes its assets on to another foundation or to a public charity.

Capital Gain Net Income—This is the amount of net gain from sales or dispositions of property used

for investment purposes (property used for charitable purposes was excluded). Capital losses from the sale or other disposition of property could be subtracted from capital gains only to the extent of such gains. Capital gain net income was used in the computation of "net investment income" (on which an excise tax generally had to be paid). In contrast, the net gain (or loss) per books from the sale of all assets (other than inventory), including those used for both investment and charitable purposes, was reported as "net gain (or loss) from the sale of assets" on Form 990-PF, Part I, line 6, column (a). This item, capital gain net income, was reported on Form 990-PF, Part I, line 7, column (b).

Charitable Trust—A charitable trust, also referred to as a "nonexempt" charitable trust, is defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) that has amounts in trust for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the excise tax provisions that apply to private foundations and are required to file the same Form 990-PF. ("Publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in these statistics.) Nonexempt charitable trusts that are treated as private foundations must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Fiduciary Income Tax Return. Data from this form are not included in this article.

Disbursements for Exempt Purposes—These deductions comprised the largest component of "qualifying distributions" and include grants paid, operating expenses, and necessary and reasonable administrative expenditures for activities that were directly related to the tax-exempt purposes of the foundation. These amounts were determined solely on the basis of the cash receipts and disbursements method of accounting, as required by law and regulations. This item was reported on Form 990-PF, Part I, line 26, column (d).

Disqualified Person—In general terms, a disqualified person is a substantial contributor; a foundation manager; person who owns more than 20 percent of a corporation, partnership, trust, or unincorporated enterprise that is itself a substantial contributor; or a family member of one of the types of disqualified persons described above.

Distributable (Payout) Amount—This is the minimum payout amount that was required to be distributed by nonoperating foundations by the end of the year following the year for which the return was filed. Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of net investment assets, called the "minimum investment return," minus the excise tax on net investment income and the income tax under Subtitle A, plus or minus other adjustments, either allowed or required (see Net Adjustments to Distributable Amount in this section).

Excess Distributions Carryover—This is the amount distributed, after fulfilling the charitable payout requirement, that equaled the excess of qualifying distributions for 1996 over the distributable amount. If necessary, excess amounts from the current year could be carried forward to be applied to the distributable amount for the 5 following years. This item was reported on Form 990-PF, Part XIII, line 9

Grantmaking Foundations (and Charitable Trusts)—For the statistics in this article, grantmaking foundations and trusts are those organizations that reported \$1 or more in contributions, gifts, and grants paid for charitable purposes on Form 990-PF, Part I, line 25, column (d).

Inventories—The value of materials, goods, and supplies purchased or manufactured by the organization and held for sale or use in some future period is included. This item was reported on Form 990-PF, Part II, line 8, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Charitableuse—This represents either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment not held for investment purposes and used by the organization in conducting its charitable activities. This item was reported on Form 990-PF, Part II, line 14, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Land, Buildings, and Equipment, Investment-use—This represents either the book value (less accumulated depreciation) or fair market value of all land, buildings, and equipment held for investment purposes, such as rental properties. This item was reported on Form 990-PF, Part II, line 11, columns (a) (beginning-of-year book value), (b) (end-of-year book value), and (c) (end-of-year fair market value).

Minimum Investment Return—This is the aggregate fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire these assets and the cash held for charitable activities, multiplied by 5 percent. The minimum investment return was used as the base for calculating the "distributable amount." This item was reported on Form 990-PF, Part X, line 6.

Net Adjustments to Distributable Amount— Adjustments that increased the "distributable amount" consist of increases attributable to the income portion (as distinct from the principal portion) of distributions from split-interest trusts on amounts placed in trust after May 26, 1969. (A split-interest trust is a trust that is not exempt from tax and not all of whose interests are devoted to charitable, religious, educational, and like purposes, but that has amounts in trust for which a charitable contribution deduction was allowed. These organizations file Form 5227, Split-Interest Trust Information Return.) Recoveries of amounts previously treated as qualifying distributions also had to be added back to the distributable amount. Adjustments that decreased the distributable amount were the result of income required to be accumulated by the terms of an organization's governing instrument. These adjustments were allowed only for foundations or trusts organized before May 27, 1969, whose governing instrument continued to require such accumulation, since State Courts would not allow the organization to change its governing instrument. These items were reported on Form 990-PF, Part XI, lines 4a, 4b, and 6.

Net Gain (or Loss) from Sales of Assets—
Profits and losses from sales of such items as securities, land, buildings, or equipment are included. Gain or loss reflected the amount shown on the books of

the foundation and included any amount from the sale of property used for either investment or tax-exempt charitable purposes. Most of the gain or loss was from sales of stocks and bonds. Profit or loss from the sale of inventory items was included in gross profit (loss) from business activities. This item was reported on Form 990-PF, Part I, line 6, column (a).

Net Investment Assets (Noncharitable-use Assets)—For purposes of calculating the "minimum investment return," only the average, rather than end-of-year, fair market value of assets that were not used or held for use for charitable purposes enter into the computation. An asset was considered an investment asset if it was not used in carrying out a charitable, educational, or other similar function which gave rise to the tax-exempt status of the foundation. Examples include the fair market value of securities and rental property owned by the foundation for investment purposes. The asset amounts included on the balance sheet in Part II of Form 990-PF included both investment and charitable-use assets. This item, which was reported on Form 990-PF, Part X, line 5, is not shown separately in the tables of this article. However, "minimum investment return," which is based on net investment assets, is shown in the tables

Net Investment Income—This is the amount by which the sum of gross investment income plus capital gain net income exceeds allowable deductions. Included in investment income were interest, dividends, capital gain net income, rents, payments with respect to securities loans (as defined in Code section 512 (a)(5)), and royalties. Any investment income derived from unrelated trade or business activities that were subject to the "unrelated business income" tax reported on Form 990-T, Exempt Organization Business Income Tax Return was excluded. This item was reported on Form 990-PF, Part I, line 27b, column (b).

Nonoperating Foundations (and Nonoperating Charitable Trusts)—These are organizations that generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to operating foundations and trusts that engaged in charitable activities themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own,

in addition to making grants. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period. An organization's status as a nonoperating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Operating Foundations (and Operating Charitable Trusts)—These organizations generally expended their income for direct, active involvement in a tax-exempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for 1996, the foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test."

To meet the income test, a foundation or trust had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). Simply put, to meet the assets test, a foundation or trust had to directly use 65 percent or more of its assets for the active conduct of charitable activities. To meet the endowment test, a foundation or trust had to regularly make distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." To meet the support test, a foundation or trust had to regularly receive substantially all of its support (other than from gross investment income) from the public or from five or more qualifying exempt organizations, and (a) no more than 25 percent of its support (other than from gross investment income) from any one such qualifying exempt organization; and (b) no more than 50 percent of its support from gross investment income.

Distributions made by a private nonoperating foundation or trust to an operating foundation or trust qualified toward meeting the nonoperating organization's distribution requirement. (Distributions made

by one nonoperating foundation or trust to another were subject to a number of conditions and restrictions requiring a "pass-through" of the distribution, whereby the donor organization received credit for a qualifying distribution but the donee organization did not.) Additionally, contributions to operating foundations or trusts were deductible on the donors' individual income tax returns, up to 50 percent of their "adjusted gross income" (as opposed to 30 percent for contributions to nonoperating foundations).

While most operating foundations paid the excise tax on net investment income, 17 percent of operating foundations were exempt from this tax for 1996 under section 4940(d)(2) of the Internal Revenue Code. In order to be exempt, an operating foundation was required to meet the following requirements in any given year: (1) maintain public support for a minimum of 10 taxable years; (2) maintain a governing body at all times that is broadly representative of the general public and that is comprised of no more than 25 percent disqualified individuals; and (3) at no time during the year include a disqualified individual as an officer of the foundation. An organization's status as an operating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Other Assets—This category includes: (1) those assets not allocable to a specific asset item on the Form 990-PF balance sheet or not included elsewhere on the return; and (2) certain amounts given special treatment in the course of statistical processing. The first category included such items as dividends receivable, escrow deposits, income tax refunds, interest discounts, interest-free loans, overdraft protection, and program-related investments. The second category included atypical amounts reported by the return filer as "negative liabilities." These items were reported on Form 990-PF, Part II, line 15, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c) end-of-year fair market value.

Other Investments—Investments reported as "other" include such items as advances, bank certificates of deposit, cash values of life insurance, certificates of investment, miscellaneous loan income, and holdings in art, coins, gold, and gems. These items were reported on Form 990-PF, Part II, line 13, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c) end-of-year fair market value.

Private Foundation—A private foundation is defined in Internal Revenue Code section 501(c)(3) as a nonprofit organization with a narrow source of funds that operated or supported educational, scientific, charitable, religious, and other programs dedicated to improving the general welfare of society. A private foundation qualified for tax-exempt status under Code section 501(c)(3) but was not (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that was operated by, or in connection with, any of the above described organizations; or (4) an organization that conducted tests for public safety. The primary difference between a private foundation and a public charity was the sources of the organization's funding. A foundation was typically funded primarily by an individual, a family, or a corporation, while a public charity received its funds from a large number of sources among the general public.

Qualifying Distributions—Qualifying distributions include disbursements for charitable purposes (grants, direct expenditures to accomplish charitable purposes, and charitable-purpose operating and administrative expenses); amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the foundation's or trust's obligation to pay out its "distributable amount." This item was reported on Form 990-PF, Part XII, line 4.

Set-Asides—Amounts set aside for specific charitable purposes can be treated as qualifying distributions only if the foundation or charitable trust establishes to the satisfaction of the IRS that the amount will be paid for the specific project within 60 months from the date of the first set-aside and if the foundation meets either the suitability test or the cash distribution test. To meet the suitability test, a foundation must receive prior approval from the IRS and must demonstrate that the project can be better accomplished by a set-aside than by an immediate payment of funds. To meet the cash distribution test under section 4942(g)(2)(B)(ii), a foundation must complete a schedule with its annual return showing how the requirements are met. The foundation must

submit a schedule for the year of the set-aside and for each subsequent year until the set-aside amount has been distributed. Set-asides were reported on Form 990-PF, Part XII, lines 3a and 3b.

Total Assets—This is the sum of all assets reported in the foundation's balance sheet, shown at both book value and fair market value. Total assets were reported on Form 990-PF, Part II, line 16, columns (a) beginning-of-year book value, (b) end-of-year book value, and (c) end-of-year fair market value.

Total Expenses—This is the sum of contributions, gifts, and grants paid, plus various operating and administrative expenses related to both investment and charitable-purpose activities. Total expense items were reported as shown on the books and records of the foundation and were based on either the cash receipts or the accrual method of accounting. Total expenses were reported on Form 990-PF, Part I, line 26, column (a).

Total Revenue—This is the sum of gross contributions, gifts, and grants received; interest on savings and temporary cash investments; dividends and interest from securities; net gain (or loss) from sales of assets (mostly investment assets, but also charitable-use assets); gross rents and royalties; gross profit (or loss) from business activities; and other income (such as royalty income, program-related investment income, interest earned on assets used for charitable purposes, and imputed interest on certain deferred payments). These other income items were reported on Form 990-PF, Part I, line 11, column (a). Total revenue items, which included both investment and charitable-use items, were reported as shown on the books and records of the foundation, and were based on either the cash receipts or the accrual method of accounting. Total revenues were reported on Form 990-PF, Part I, line 12, column (a).

Undistributed Income—This is the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years. Sanctions were imposed in the form of excise taxes on private foundations that did not pay out an amount equal to the "distributable amount" by the end of the following tax year. This item was reported on Form 990-PF, Part XIII, line 6f, column (d).

Unrelated Business Income (UBI)—This is an exempt organization's income from a trade or business that was regularly carried on by the organization and that was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. A tax, as reported on Form 990-T, Exempt Organization Business Income Tax Return, is imposed on "unrelated business taxable income (UBTI)." Unrelated business taxable income is gross unrelated business income, less deductions directly connected with carrying on the trade or business, and less certain other deductions. The unrelated business income tax was determined based on the corporate or trust tax rates that were in effect for a given tax year. (Gross) unrelated business income and the associated business codes were reported on Form 990-PF, Part XVI-A, columns (a) and (b).

Notes and References

- [1] The amount of contributions, gifts, and grants paid by foundations is based on the amount that foundations actually disbursed for 1996 using the cash receipts and disbursements method of accounting.
- [2] For 1996, the David and Lucile Packard foundation reported \$4.68 billion in contributions, gifts, and grants received and total revenue of \$4.72 billion in total revenue. The California Endowment reported \$1.34 billion in total revenue, \$1.23 billion of which were in the form of contributions, gifts, and grants.
- [3] For purposes of the analyses, "charitable trusts" refer only to the section 4947(a)(1) charitable trusts that file Form 990-PF, while "private foundations" refer to the section 501(c)(3) private foundations that file Form 990-PF.
- [4] The data presented in this article are from Forms 990-PF, filed for Reporting Year 1996,by organizations which had accounting periods *beginning* in 1996. Therefore, the statistics

- include organizations with accounting periods that ended sometime during the period December 1996 through November 1997. For a more detailed analysis, see the Data Sources and Limitations section.
- [5] For further information on nonprofit organizations that are tax-exempt under Internal Revenue Code section 501(c), see Meckstroth, Alicia and Arnsberger, Paul, "A 20-Year Review of the Nonprofit Sector, 1975-1995," *Statistics of Income Bulletin*, Fall 1998, Volume 18, Number 2.
- [6] For an in-depth discussion of organizations other than private foundations that are tax-exempt under Internal Revenue Code section 501(c)(3), see Hilgert, Cecelia and Whitten, Melissa, "Charities and Other Tax-Exempt Organizations, 1995," *Statistics of Income Bulletin*, Winter 1998-1999, Volume 18, Number 3.
- [7] Programs termed "charitable" refer to taxexempt activities which are charitable, educational, scientific, social, literary, or religious in nature.
- [8] The net value of noncharitable-use assets was reported on Form 990-PF, Part X, line 5. For more information, see Net Investment Assets in the Explanation of Selected Terms section.
- [9] Renz, Loren; Mandler, Crystal; and Trieber, Rikard, Foundation Giving: Yearbook of Facts and Figures on Private, Corporate, and Community Foundations, 1998 edition, New York: The Foundation Center, 1998, Table 58, p. 70.
- [10] Some data in this article are from unpublished Statistics of Income tabulations.
- [11] A foundation is considered domestic if it is organized in the United States; however, this does not necessarily imply that all of its assets, activities, or grant recipients are domestic.
- [12] For 1995, the Robert W. Woodruff Foundation reported fair market value assets of \$2.3 billion, making it the eleventh-largest domestic foundation for that year. Additionally, the

- foundation reported \$72.5 million in grants paid for 1995.
- [13] Seven of the ten largest foundations had calendar year accounting periods, meaning that all of their activity occurred during the calendar year period. However, three of the ten had other fiscal year accounting periods. For instance, for the 1996 Reporting Year, the Ford Foundation had an accounting period ending in September 1997 and the J. Paul Getty Trust in June 1997; therefore, much of their activity for 1996 occurred in Calendar Year 1997. See the Data Sources and Limitations section.
- [14] For more information on the unrelated business income of exempt organizations, see Riley, Margaret, "Unrelated Business Income of Nonprofit Organizations: Highlights of 1995 and a Review of 1991-1995," *Statistics of Income Bulletin*, Spring 1999, Volume 18, Number 4.
- [15] Net investment income is comprised of income not considered to be related to a foundation's charitable purpose, such as interest, dividends, and capital gains net income. The net investment income amount used in calculating the NII yield was obtained from column (b) of the income statement, found in Part I of Form 990-PF.
- [16] The rate-of-total-return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation assets. See Salamon, Lester M. and Voytek, Kenneth P., Managing Foundation Assets: An Analysis of Foundation Investment and Payout Procedures and Performance, Washington, DC: The Council on Foundations, 1989, p.32. The formula is as follows:

Rate of Total Return =

[Ending Fair Market Value of Assets

- Beginning Fair Market Value of Assets
- Contributions Received
- + Grants Paid
- + Operating and Administrative Expenses

+ Excise Tax Paid on Net Investment Income] DIVIDED BY

[Beginning Fair Market Value of Assets + 50 percent of Contributions Received]

To calculate the rate of total return shown in Figure G, samples of private foundation information returns for 1995 and 1996 were matched in order to analyze both the beginning and end-of-year fair market value data.

The beginning fair market value of assets for 1996 equals the ending fair market value reported on the 1996 tax return. Thus, in order to provide a consistent form of measurement by which to compare rates of total return among different years, the ending fair market value of asset amounts (reported for both the year subject to the computation and the prior year) was used to compute the rate of return. In order to obtain an inflation-adjusted real rate of return, the figure equaling the beginning-ofyear fair market value of assets was adjusted using the 1992 chain-type price index for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, Survey of Current Business, Volume 78, Number 8, August, 1998, Table 7.1.

- [17] For data from previous years, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1996," *Statistics of Income Bulletin*, Winter 1998-1999, Volume 18, Number 3.
- [18] To calculate the payout rate, the amount of (adjusted) qualifying distributions was divided by the amount of the monthly average of net investment (or noncharitable-use) assets. This payout formula adjusts qualifying distributions with additions and subtractions that are made to the required "distributable amount" on Form 990-PF. The numerator of the formula also includes excess distributions made in the past and applied to the requirement of the current filing year.

N/A--Not applicable.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 3) because foundations may use either the cash disbursement or the accrual method of accounting.

NOTE: Detail may not add to totals because of rounding.

N/A--Not applicable

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that charitable trusts actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 4) because charitable trusts may use either the cash disbursement or the accrual method of accounting.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipt and disbursement method of accounting.

NOTE: Detail may not add to total because of rounding.

 $^{^\}star$ Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipt and disbursement method of accounting.

NOTE: Detail may not add to total because of rounding.

Domestic Private Foundations and Charitable Trusts, 1996-1997

Data Release

omestic private foundations contributed \$16.4 billion to charitable activities for 1997, a 13percent increase over 1996. These organizations, which file the information return Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation), represent roughly one-fifth of all taxexempt entities required to file information returns annually with the Internal Revenue Service. Like other organizations defined as tax-exempt under Internal Revenue Code section 501(c)(3), private foundations support activities in such areas as health, education, human services, arts and humanities, and environmental preservation. The majority of private foundations are classified as "nonoperating," meaning that their charitable support is generally given in the form of grants or other outlays to organizations that execute charitable programs. "Operating" foundations, which represent a smaller portion of Form 990-PF filers, are more directly involved in the operation of their charitable activities, but may also be involved in grantmaking.

Foundations are distinguished from publicly-supported organizations that file Form 990 by their narrow spheres of support and control [1]. A private foundation is generally controlled by an individual, family, or corporation and is therefore subject to more stringent IRS regulation than other types of 501(c)(3) organizations. For example, most private foundations are required to pay an excise tax on their "net investment income," and nonoperating foundations are subject to a "payout" requirement, which mandates that they annually contribute a minimum amount, based on a percentage of the value of their noncharitable-use assets, for charitable purposes.

Section 4947(a)(1) nonexempt charitable trusts accounted for approximately 5 percent of all Forms 990-PF filed for 1997. These organizations, while not exempt from income tax, also make charitable distributions annually and are subject to the same tax rules as private foundations. Despite a nearly 28-percent increase in total revenue received, charitable trusts reported an 11-percent reduction in contributions, gifts, and grants distributed.

Data for 1997 are based on the returns of domestic private foundations only and do not include information reported by foreign foundations and charitable trusts, also required to file Form 990-PF. These organizations, which are organized abroad but receive certain degrees of support from U.S. sources, usually account for about 1 percent of Forms 990-PF filed. While foreign private foundations and charitable trusts may make charitable distributions within the U.S., they are generally not required to do so. In previous publications, information reported by these organizations has been included in the aggregate statistics and accompanying tables. Beginning with 1997, foreign organizations will no longer be included in aggregate published data. For comparison purposes, aggregate data for 1996, excluding foreign organizations, are also included in this data release. Figure A shows the data previously published for 1996, including foreign foundations and charitable trusts, as well as a 2-year comparison of selected data for domestic private foundations and charitable trusts [2].

Data Sources and Limitations

Tables 1, 2, 5, and 6 provide information for Reporting Years 1996 and 1997 for private foundations, while tables 3, 4, 7, and 8 provide similar data for charitable trusts.

The statistics in this article are based on a sample of Reporting Year 1997 Forms 990-PF that were filed with the IRS. Organizations having accounting periods beginning in 1997 (and therefore ending between December 1997 and November 1998) were required by IRS to file a 1997 Form 990-PF. Some part-year returns were included in the samples for organizations that changed their accounting periods, or filed initial or final returns. Some 65 percent of the foundations in the sample had accounting periods covering Calendar Year 1997 or, in some cases, partyear periods that ended in December 1997. For charitable trusts, 59 percent filed calendar year returns. The 1997 sample was stratified based on both the size of fair market value of total assets and the type of organization (either a foundation or a 4947(a)(1) charitable trust).

Foundation returns were selected at rates that ranged from approximately 2.7 percent (for the more numerous but very small asset-size returns) to 100 percent (for the relatively few returns with large

This data release was written by Melissa Whitten, an economist with the Special Studies Special Projects Section, under the direction of Michael Alexander, Chief.

¹ Data in columns (1) and (5) were previously published, and include data for foreign foundations and charitable trusts for 1996. Data in columns (2) and (6) are recalculated to exclude foreign foundations and charitable trusts and are comparable with 1997 data in columns (3) and (7), which are for domestic organizations only.

amounts of assets). Charitable trust returns were selected at rates that ranged from 14.0 percent to 100 percent. The 8,410 returns in the combined sample (7,206 foundations and 1,204 trusts) were drawn from an estimated population of 57,463 foundations and 3,070 trusts. The magnitude of sampling error, measured by coefficients of variation for selected items, is shown in Figure B.

The samples were designed to provide reliable estimates of total assets and total revenue. To accomplish this, 100 percent of foundation returns with

fair market asset value of \$10 million or more and 100 percent of charitable trust returns with fair market asset value of \$1 million or more were included in the samples, since these were the returns that accounted for the majority of financial activity. Efforts were made to verify that organizations that were selected for the sample were properly classified as foundations or trusts. The relatively small number of foundations in the sample that were incorrectly selected as trusts were reclassified as foundations (for the statistics) using identification codes from the IRS

² These data are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes for 1996 and 1997 using the cash receipt and disbursement method of accounting.

Domestic Private Foundations and Charitable Trusts, 1996-1997

Business Master File. However, the weights used for these organizations were based on the original sample selection classification. These same methods were used for the trusts that were incorrectly sampled as foundations.

Approximately 6 percent of all foundations, including those reclassified as foundations, reported \$10 million or more in fair market value of total assets for 1997. While these foundations were selected at a rate of 100 percent, the remaining foundation population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 2.7 percent for returns with assets zero, unreported, or less than \$125,000; 3.9 percent for returns with assets of \$125,000 to less than \$400,000; 7.0 percent for returns with assets of \$400,000 to less than \$1 million; 9.2 percent for returns with assets of \$10,000; and 19.4 percent for returns with assets of \$2.5 million to less than \$10 million.

Approximately 63 percent of all section 4947(a)(1) charitable trusts in the sample reported \$1 million or more in fair market value of total assets for 1997. While these trusts were selected at a rate of 100 percent, the remaining trust population was randomly selected for the sample at various rates of less than 100 percent depending on asset size: 13.8 percent for returns with assets zero, unreported, or less than \$100,000; and 22.4 percent for returns with assets of \$100,000 to less than \$1 million.

The population from which the 1997 sample was drawn consisted of Form 990-PF records posted to the IRS Business Master File during 1997 and 1998. Some of the records designated were for organizations that were deemed inactive or terminated. Inactive and terminated organizations are not reflected in the estimates. For the small number of active, large foundations whose returns were not yet filed or were otherwise unavailable for the statistics, data were estimated using other returns having similar characteristics. For the unavailable active trust returns, which were smaller in size than those for foundations, prior-year data of those trusts were in most instances used as a substitute.

The data presented were obtained from returns as originally filed with IRS. The data were subject to comprehensive testing and correction procedures in order to increase statistical reliability and validity. In most cases, changes made to the original return as a

result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated. A general discussion of the reliability of estimates based on samples, methods for evaluating both the magnitude of sampling and non-sampling error, and the precision of sample estimates can be found in the general Appendix to this issue of the *SOI Bulletin*.

Explanation of Terms

Charitable Trust.—A charitable trust, also referred to as a "nonexempt" charitable trust, is defined in Internal Revenue Code section 4947(a)(1) as an organization (1) that is not considered tax-exempt under section 501(a); (2) that has exclusively charitable interests; and (3) that has amounts in trust for which donors are allowed to claim a tax deduction for charitable contributions. Nonexempt charitable trusts that are not publicly supported are subject to the excise tax provisions that apply to private foundations and are required to file Form 990-PF. (Most "publicly supported" nonexempt charitable trusts are required to file Form 990, Return of Organization Exempt From Income Tax, and are, therefore, not included in these statistics.) Nonexempt charitable trusts that are treated as private foundations must pay an annual tax on income (usually from investments) that is not distributed for charitable purposes, and they must report such income and tax on Form 1041, U.S. Income Tax Return for Estates and Trusts. Data from this form are not included in this article.

Distributable (Payout) Amount.—This is the minimum payout amount that was required to be distributed by nonoperating foundations by the end of the year following the year for which the return was filed. Failure to distribute income within this time period resulted in a 15-percent excise tax on the undistributed portion. The distributable amount was computed as 5 percent of the average monthly value of net investment assets, called the "minimum investment return," minus the excise tax on net investment income and the income tax under Subtitle A, plus or minus other adjustments, either allowed or required.

Excess Distributions Carryover.—This is the amount distributed, after fulfilling the charitable payout requirement, that equaled the excess of qualifying distributions for 1997 over the distributable amount. Excess amounts from the current year may be carried forward to be applied to the distributable

amount for the 5 following years. This item was reported on Form 990-PF, Part XIII, line 9.

Minimum Investment Return.—This is 5 percent of the average monthly fair market value of assets not used for charitable purposes, less both the indebtedness incurred to acquire these assets and the cash held for charitable activities. The minimum investment return was used as the base for calculating the "distributable amount." This item was reported on Form 990-PF, Part X, line 6.

Nonoperating Foundations (and Charitable *Trusts*).—These are organizations that generally carried on their charitable activities in an indirect manner by making grants to other organizations directly engaged in charitable activities, in contrast to operating foundations and trusts that engaged in charitable activities themselves. However, some nonoperating foundations and trusts were actively involved in charitable programs of their own, in addition to making grants. Nonoperating foundations and trusts were subject to an excise tax (and possible additional penalties) for failure to distribute an annual minimum amount for charitable purposes within a required time period. An organization's status as a nonoperating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Operating Foundations (and Charitable Trusts).—These organizations generally expended their income for direct, active involvement in a tax-exempt activity, such as operating a library or museum, or conducting scientific research. Operating foundations and trusts were excepted from the income distribution requirement and related excise taxes that were applicable to their nonoperating counterparts. To qualify as an operating foundation or trust for 1997, the foundation or trust had to meet both an "income test" and one of three other tests: an "assets test," an "endowment test," or a "support test."

To meet the income test, a foundation or trust had to spend at least 85 percent of the lesser of its "adjusted net income" or "minimum investment return" on the direct, active conduct of tax-exempt, charitable activities (as opposed to the payout of grants in support of such programs). Simply put, to meet the assets test, a foundation or trust had to directly use 65 percent or more of its assets for the active conduct of charitable activities. To meet the endowment test, a foundation or trust had to regularly

make distributions for the active conduct of charitable activities in an amount not less than two-thirds of its "minimum investment return." To meet the support test, a foundation or trust had to regularly receive substantially all of its support (other than from gross investment income) from the public or from five or more qualifying exempt organizations, *and* (a) no more than 25 percent of its support (other than from gross investment income) from any one such qualifying exempt organization; and (b) no more than 50 percent of its support from gross investment income.

Distributions made by a private nonoperating foundation or trust to an operating foundation or trust qualified toward meeting the nonoperating organization's distribution requirement. (Distributions made by one nonoperating foundation or trust to another were subject to a number of conditions and restrictions requiring a "pass-through" of the distribution, whereby the donor organization received credit for a qualifying distribution but the donee organization did not.) Additionally, contributions to operating foundations or trusts, along with contributions to most other charitable organizations, were deductible on the donor's individual income tax return up to 50 percent of the "adjusted gross income" (as opposed to 30 percent for contributions to nonoperating foundations).

While most operating foundations paid the excise tax on net investment income, 17 percent of operating foundations were considered exempt from this tax for 1997 under section 4940(d)(2) of the Internal Revenue Code. In order to be exempt, an operating foundation was required to meet the following requirements in any given year: (1) maintain public support for a minimum of 10 taxable years; (2) maintain a governing body at all times that is broadly representative of the general public and that is comprised of no more than 25 percent disqualified individuals (defined as substantial contributors, foundation managers, persons with more than 20 percent ownership in an enterprise that is itself a substantial contributor, or a family member of one of the above types of disqualified persons); and (3) at no time during the year include a disqualified individual as an officer of the foundation. An organization's status as an operating foundation or trust was indicated on Form 990-PF, Part VII, line 9.

Private Foundation.—A private foundation is defined in Internal Revenue Code section 501(c)(3)

as a nonprofit organization with a narrow source of funds that operated or supported educational, scientific, charitable, religious, and other programs dedicated to improving the general welfare of society. A private foundation qualified for tax-exempt status under Code section 501(c)(3) but was not (1) a church, school, hospital, or medical research organization; (2) an organization with broad public support in the form of contributions or income from tax-exempt activities; (3) an organization that was operated by, or in connection with, any of the above described organizations: or (4) an organization that conducted tests for public safety. The primary difference between a private foundation and a public charity was the sources of the organization's funding. A foundation was typically funded primarily by an individual, a family, or a corporation, while a public charity received its funds from a large number of sources within the general public.

Qualifying Distributions.—Qualifying distributions include disbursements for charitable purposes (grants, direct expenditures to accomplish charitable purposes, and charitable-purpose operating and administrative expenses); amounts paid to acquire assets used directly to accomplish tax-exempt functions; charitable program-related investments; and amounts set aside for future charitable projects. Qualifying distributions could be credited against the

foundation's or trust's obligation to pay out its "distributable amount." This item was reported on Form 990-PF, Part XII, line 4.

Undistributed Income.—This is the portion of the required "distributable amount" still undistributed after applying against it the sum of current-year qualifying distributions and any excess distributions carried over from prior years. Sanctions were imposed in the form of excise taxes on private foundations that did not pay out an amount equal to the "distributable amount" by the end of the following tax year. This item was reported on Form 990-PF, Part XIII, line 6f, column (d).

Notes and References

N/A--Not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in column 13 may be negative due to reported negative revenue amounts or to reported expenses in excess of revenue.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that private foundations actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 5) because private foundations may use either the cash disbursement or the accrual method of accounting.

Table 2.--All Domestic Private Foundations, 1997: Number and Selected Financial Data, by Type of Foundation and Size of Fair Market Value of Total Assets

[All figures are estimates based on a sample-money amounts are in thousands dollars]

N/A--Not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in column 13 may be negative due to reported negative revenue amounts or to reported expenses in excess of revenue.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that private foundations actually disbursed for charitable purposes for 1997 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 6) because private foundations may use either the cash disbursement or the accrual method of accounting.

³ Less than \$500.

NOTE: Detail may not add to totals because of rounding.

N/A--Not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in column 13 may be negative due to reported negative revenue amounts or to reported expenses in excess of revenue.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that charitable trusts actually disbursed for charitable purposes for 1996 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 7) because charitable trusts may use either the cash disbursement or the accrual method of accounting.

³ Less than \$500.
NOTE: Detail may not add to totals because of rounding.

Table 4.--All Domestic Section 4947(a)(1) Charitable Trusts Treated as Foundations, 1997: Number and Selected Financial Data, by Type of Charitable Trust and Size of Fair Market Value of Total Assets [All figures are estimates based on a sample-money amounts are in thousands dollars]

N/A--Not applicable.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data shown in column 13 may be negative due to reported negative revenue amounts or to reported expenses in excess of revenue.

² The data shown in columns 18 and 19 are based on the amount of contributions, gifts, and grants that charitable trusts actually disbursed for charitable purposes for 1997 using the cash receipt and disbursement method of accounting. These amounts differ somewhat from those reported as contributions, gifts, and grants paid shown in the income statement (Table 8) because charitable trusts may use either the cash disbursement or the accrual method of accounting.

³ Less than \$500

NOTE: Detail may not add to totals because of rounding.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 1, which are calculated using the cash receipt and disbursement method of accounting.

NOTE: Detail may not add to total because of rounding.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ The data in this row are based on the amount of contributions, gifts, and grants paid as reported on the income statement portion of the return. These amounts differ somewhat from the contributions, gifts, and grants paid in columns 18 and 19 of Table 2, which are calculated using the cash receipt and disbursement method of accounting.

NOTE: Detail may not add to total because of rounding.

by Melissa Whitten

ach year, private foundations contribute billions of dollars to various charitable activities. The financial assistance provided by these organizations supports programs dedicated to education. health and human services, environmental preservation, arts and culture, and many other areas. Through this assistance, private foundations make a significant contribution to the nonprofit sector. While many small foundations donate large percentages of their annual revenue to charitable giving, the major economic impact of private foundations is attributable to the relatively small number of organizations that hold the largest amounts of assets and pay out the greatest amount of charitable dollars. The largest 100 foundations alone, though they make up less than 1 percent of the total number of private foundations, generally report approximately one-third of the charitable contributions paid and the fair market value assets held by foundations. Between 1985 and 1997. asset holdings for the largest 100 nonoperating private foundations included in the panel and operating throughout that period more than tripled, rising from \$37.6 billion to \$120.6 billion. Charitable contributions, gifts, and grants also increased considerably, rising from \$1.5 billion for 1985 to \$4.5 billion for 1997 [1].

Panel Study Methodology

The statistics presented in this article are based on a panel constructed from sample data collected from Form 990-PF, Return of Private Foundation (or Section 4947(a)(1) Charitable Trust Treated as a Private Foundation), the annual information return filed by private foundations and charitable trusts. Data were assembled for domestic nonoperating private foundations appearing in the Statistics of Income (SOI) samples for Reporting Years 1985-1997 [2]. The panel was comprised of the largest 100 nonoperating foundations, as determined by the size of Reporting Year 1997 fair market value of total assets that met the criterion of being present in all of the annual SOI samples used for this study. Twentytwo of the largest foundations, based on the 1997 fair market value of total assets, did not meet this crite-

Melissa Whitten is an economist with the Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief.

rion and were, therefore, eliminated from the final panel. Operating foundations, which conduct their own charitable activities and are not legally required to make financial distributions, as well as private foundations organized abroad and nonexempt charitable trusts required to file Form 990-PF were not included in the panel. Unless otherwise noted, the aggregate figures herein were calculated based on data obtained from only those large asset-size organizations meeting all of the criteria to be included in the final panel [3]. Selected statistics for these organizations, in inflation-adjusted constant dollars, are shown in Figure A [4].

Public Disclosure

Private foundations are required to make their Forms 990-PF available for inspection by the general public. The information returns filed annually by private foundations are approved for public disclosure under Internal Revenue Code section 6104(b), which permits the release of selected data reported on the annual Form 990-PF. Financial information for all of the organizations included in the panel appears in Table 1 at the end of this article.

Organizational Definitions and Legislative Background

Like public charities, private foundations are taxexempt under Internal Revenue Code section 501(c)(3). However, while public charities receive broad-based support from diverse sources in the general public, private foundations are narrowly supported and controlled, often by an individual, family, or corporation [5]. Generally, a foundation is organized in the form of a corporation, association, or trust, which either conducts its own charitable activities, or provides some manner of financial support to other charitable organizations. Due to the centralization of support and control, foundations lack direct accountability to the general public and are thus subject to more stringent tax regulation and oversight than other types of tax-exempt organizations. For example, as dictated by the Economic Recovery Tax Act of 1981, nonoperating foundations, which provide contributions to organizations conducting charitable activities rather than conducting their own, are required to distribute a minimum amount annually in charitable outlays. This "distributable amount" is based on 5 percent of the value of an

organization's "noncharitable-use (or net investment) assets" [6]. Those organizations that do not meet the minimum distributable amount in the required year may avoid paying a tax penalty by making the distribution prior to the end of the following year.

Distributable Amounts and Qualifying Distributions

The majority of private foundations, and all of the foundations in the panel, are classified as nonoperating and are, therefore, legally required to meet the annual distribution requirement. This requirement, based on 5 percent of a foundation's noncharitableuse assets, may be met in the current or following reporting year without tax penalty. Since the distributable amount is based on the value of net investment assets of a given foundation, fluctuations in the value of securities produce fluctuations in this amount. For example, during a time of economic prosperity and high values of investment assets, the calculated 5 percent will generally be far higher for most organizations than when investment values are lower. This is particularly important for larger organizations, such as those in the panel, as they tend to rely much more on often fluctuating, but higher income-generating, investments than on the more stable, liquid assets that are favored by smaller organizations.

An organization's efforts to meet the distribution requirement are measured by the amount of "qualifying distributions," which include contributions, gifts, and grants made for charitable purposes and overhead expenses incurred in conducting charitable operations. In most cases, qualifying distributions consist primarily of the total expenses reported for charitable purposes. However, such items as amounts paid to acquire assets directly used for charitable purposes or "set-asides," which are amounts ear-marked for charitable use at a later date, may also be included. Should qualifying distributions exceed the required distributable amount, the excess outlays may be carried over and applied to a future year's distributable amount. In the years 1985-1997, qualifying distributions for organizations in the panel consistently equaled or exceeded the distributable amount, which more than doubled between those years. Aggregate distributable amounts and qualifying distributions, in current and constant dollars, are shown in Figure B.

The major component of a foundation's qualifying distributions for a given year is the amount made in donations for charitable purposes. However, any financial outlay made that is necessary in meeting an

² These data are based on the amount of contributions, gifts, and grants that foundations actually disbursed for charitable purposes using the cash receipt and disbursement method of accounting.

organization's charitable mission can count towards the required distribution amount for a given year. For example, compensation of employees, travel expenditures, occupancy charges, and costs of producing publications relating to the organization's exempt purposes may all be considered expenditures for charitable purposes. Depreciation and compensation for professional consultants that deal solely with noncharitable-use investments are examples of outlays that could not be reported as charitable expenditures. Charitable contributions, gifts, and grants were consistently the largest charitable outlays reported by private foundations between 1985 and 1997, accounting for approximately 90 percent of all charitable expenditures in all of those years. Employee compensation, benefits, and salaries to officers, directors, and trustees represented roughly 5 percent of expenses for all years in the study; professional fees, 1 percent; and all other expenses, 3-4 percent of all charitable outlays. This allocation of expenses, which for these large organizations remained relatively stable for the years in the study, is shown in Figure C for 1997.

For 1997, only eight of the organizations included in the panel reported charitable contributions accounting for less than 80 percent of total charitable expenditures. Compensation and benefits paid to officers, directors, trustees, and other employees accounted for between 10 percent and 20 percent of all charitable outlays for nine organizations in the panel, and exceeded 20 percent for two foundations. Fees for legal, accounting, and other professional services exceeded 10 percent of all Reporting Year 1997 outlays for only two foundations.

Asset Size and the Charitable Distribution Requirement

The amount of charitable payout required for a given organization is determined based on 5 percent of total noncharitable-use assets, those investments which do not serve any operational purpose in the performance of an organization's charitable activities. On Form

990-PF, the average monthly fair market value of assets of this type is calculated and used in determining an organization's distributable amount, while total assets are reported based on their end-of-year fair market value. Real growth in the total value of fair market value of total assets during this period averaged 7.3 percent, which includes increases in the value of asset holdings and contributions and other income received in excess of disbursements each year. Total assets for the 100 foundations climbed slowly between 1985 and 1994, before experiencing significantly larger increases between 1995 and 1997. These increases, for the most part, can be attributed to the increased value of assets in the form of securities. The climb in value and holdings of total

assets, as well as the increase in noncharitable-use assets in the 13-year period, is shown in Figure D. Securities accounted for at least 80 percent of the fair market value of total assets for each of the years 1985-1997. Figure E gives a detailed view of all asset holdings for Reporting Years 1985 and 1997. By 1997, corporate stock accounted for nearly 70 percent of all investment assets, as compared to 57 percent for 1990. While all holdings in securities were collectively reported in one line of Form 990-PF until 1989, securities were broken out into Government obligations, corporate stock, and corporate bonds in later years. These and other components of investment assets for 1990-1997 are pictured in Figure F.

Yields, Rates of Returns, and Payout Rates

The realized investment income that a foundation earns on its investment assets can be measured using an income yield. The net investment income (NII) yield is calculated by dividing net investment income by the end-of-year fair market value of investment assets. Net investment income consists of any income not related to a foundation's charitable purpose, such as interest, dividends, and capital gain net income. Each year, large foundations earn much higher income yields than smaller foundations. This may indicate that larger organizations, perhaps because they have more resources to expend on investment management, may typically invest in higher-risk investment assets with the potential for greater return, in contrast with smaller organizations, which seem to invest more cautiously. For the largest 100 organizations in the panel, median net investment income yields fluctuated somewhat between 1985 and 1997, reaching an early high in 1986 and dropping to their lowest percentage, 6.3, in 1994. By the end of the period, net investment income yields had rebounded, hovering above 10 percent for 1996 and 1997. Although both the median and average NII yields have been calculated

for selected reporting years in Figure G, it is possible that the median may better represent the typical large foundation, as it minimizes the influences of large outliers on the data.

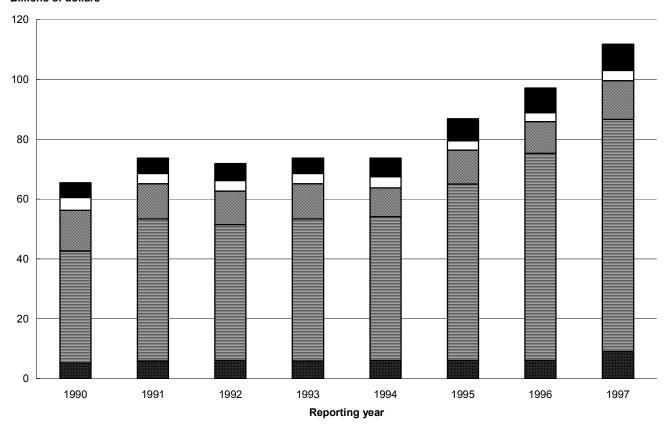

Further insight into foundation investment return can be gained by examining data for the rate of total return on assets. This measure, which represents the total capital appreciation of the endowment of a foundation, is a more comprehensive indication of total investment performance than the NII yield. The rate-of-total-return formula used here measures the change in the value of the entire asset base with consideration for inflows and outflows of money [7]. It measures the realized income from investments and other assets, as well as the unrealized appreciation or depreciation in the fair market value of assets. Like net investment income yields, rates of total return are generally higher for large foundations, indicating that rates of return on assets increase as asset holdings grow. Median rates of return on assets fluctuated notably in the 13-year period, reaching lows of less than 5 percent in 1987, 1990, and 1994 and highs of greater than 20 percent in 1991 and 1995. Median and average rates of return, based on size of fair market value of total assets, for se-

lected Reporting Years between 1986-1997 are shown in Figure G.

Figure G also shows payout rates. The payout rate is a measure of a foundation's charitable giving as compared with the organization's total noncharitable-use, or net investment, assets [8]. It is calculated by dividing the amount of qualifying distributions by the monthly average of net investment assets. As with NII yields and rates of return, the median rates are used in these analyses as they lessen the effects of large outliers on the data. Although, as previously shown, qualifying distributions

increased for all years in the study, average payout rates remained close to the required 5 percent, for all asset sizes except those with assets of \$400 million or less. For most years, some foundations in the category made payouts in considerable excess of 5 percent. This results in median payout rates close to 5 percent and higher average rates for this category.

Data Sources and Limitations

The statistics in this article are based on returns chosen from sample data for Forms 990-PF that were filed with the Internal Revenue Service for

¹ Average NII yields, rates of return, and payout rates were calculated individually for each organization in an asset-size class using the formulas described in footnotes 7 and 8 of this article. The average and median values were calculated based on the individual, unweighted values for NII yield, rate of return, and payout rate for each of the organizations.

Reporting Years 1985-1997. While these returns were chosen from a stratified sample, large organizations with \$10 million or more in fair market value of total assets were sampled at a rate of 100 percent. The organizations were chosen for the panel study

based on Reporting Year 1997 fair market value of total assets and were required to have returns appearing in the SOI sample for each of Reporting Years 1985-1997. The fair market value of total assets for 1997 of the 100 organizations included in

the panel study ranged from \$274 million to \$11.5 billion.

Notes and References

- [1] The amount of contributions, gifts, and grants paid by foundations is based on the amount that foundations actually disbursed for a given reporting year using the cash receipt and disbursement method of accounting.
- [2] The data presented in this article are from Forms 990-PF, filed for a given reporting year, by organizations which had accounting periods beginning in that reporting year. For example a return filed for Reporting Year 1997 would have an accounting period beginning between January and December 1997 and ending between December 1997 and November 1998.
- [3] For additional information on these and other domestic organizations filing Form 990-PF, including statistics for operating foundations, smaller foundations, and section 4947(a)(1) charitable trusts, see Whitten, Melissa, "Domestic Private Foundations and Charitable Trusts, 1996-1997, " *Statistics of Income Bulletin*, Fall 2000, Volume 20, Number 2.
- [4] All data marked as "constant dollars" have been adjusted for inflation using the 1996 chain-type price index from the National Income and Product Accounts, per the Council of Economic Advisors, *Economic Report of the President*, Table B-7, January 2001.
- [5] For statistics on organizations other than private foundations exempt under Internal Revenue Code section 501(c)(3), see Arnsberger, Paul, "Charities and Other Tax-Exempt Organizations, 1997," *Statistic of Income Bulletin*, Fall 2000, Volume 20, Number 2.
- [6] The net value of noncharitable-use assets was reported on Form 990-PF, Part X, line 5.
- [7] The rate-of-total-return formula used here is the same as that developed and used by Salamon and Voytek in their studies on foundation assets. See Salamon, Lester M. and Voytek, Kenneth P., *Managing Foundation Assets: An Analysis of*

Foundation Investment and Payout Procedures and Performance, The Council on Foundations, Washington, DC, 1989, p.32. The formula is as follows:

Rate of Total Return =

[Ending Fair Market Value of Assets

- Beginning Fair Market Value of Assets
- Contributions Received
- + Grants Paid
- + Operating and Administrative Expenses
- + Excise Tax Paid on Net Investment Income]

DIVIDED BY

[Beginning Fair Market Value of Assets

+ 50 percent of Contributions Received]

To calculate the rate of total return shown in Figure G, samples of private foundation information returns for consecutive years were matched in order to analyze both the beginning and end-of-year fair market value data.

The beginning fair market value of assets for a given year equals the ending fair market value for the previous year as reported on the tax return. Thus, in order to provide a consistent form of measurement by which to compare rates of total return among different years, the ending fair market value of asset amounts (reported for both the year subject to the computation and the prior year) was used to compute the rate of return.

[8] To calculate the payout rate, the amount of (adjusted) qualifying distributions was divided by the amount of the monthly average of net investment (or noncharitable-use) assets. This payout formula adjusts qualifying distributions with additions and subtractions that are made to the required "distributable amount" on Form 990-PF. The numerator of the formula also includes excess distributions made in the past and applied to the filing requirement of the current year.

Unrelated Business Income of Nonprofit Organizations

Introduction

enerally, a tax-exempt organization with gross income of \$1,000 or more for the year from an "unrelated trade or business" is subject to the "unrelated business income tax." An unrelated trade or business is one which has little or no relationship to the organization's tax-exempt purposes, except to provide funds to carry out those purposes. The provisions for taxing income apply only if the trade or business is regularly carried on and is not substantially related to carrying out the exempt purpose for which the organization exists. Certain types of activities are excluded from the definition of an unrelated trade or business. For example, a business is not considered as unrelated if it is conducted mainly with volunteer labor, carried on primarily for the convenience of organization members, produces income from selling donated merchandise, or operates legal bingo games, as specified in the Internal Revenue (IR) Code.

The taxation of gross unrelated business income was designed to place the unrelated activities of exempt organizations on an equal footing with similar activities carried out by taxable entities, such as nonexempt corporations. Although their unrelated business income is taxed, exempt organizations may enter into a wide range of nontaxable commercial activities if they are substantially related to their taxexempt missions.

For 1997, an estimated 39,302 organizations reported aggregate gross unrelated business income (UBI) of \$7.8 billion. After offsetting this income with \$8.5 billion of total deductions, the resulting overall deficit was \$0.7 billion. However, 53 percent of the organizations had net taxable profits, which collectively amounted to \$1.4 billion. Nonprofit organizations reported an aggregate total income tax liability of \$422.7 million for 1977. Between 1996 and 1997, taxable profits rose 18 percent. This increase was much smaller than the annual increases in taxable profits that occurred between 1994 and 1996. Over that period, these profits rose 39 percent from 1994 to 1995 and then another 31 percent from 1995 to 1996.

Articles and tables included in this section provide extensive information on unrelated business income,

deductions, and taxes for Tax Years 1991 through 1997, as collected from samples of Forms 990-T, Exempt Organization Business Income Tax Return. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 file a "partial" Form 990-T, whereupon they are not required to provide detailed deduction items or to fill out the form schedules. All other organizations file a "complete" Form 990-T. The return schedules are used to compute cost of sales and services and also to determine unrelated business income received from rents, debtfinanced property, investments (IR Code section 501(c)(7), (9), and (17) organizations only), controlled organizations, exploited exempt activities, and advertising. In addition to income statement and tax information, the Form 990-T provides descriptions of principal unrelated business activities carried on by nonprofit organizations, based on industry codes provided in the tax form instructions.

This third volume of the *Compendium* is the first to contain a time series of Form 990-T unrelated business income statistics. Beginning with Tax Year 1993, the Form 990-T study incorporated a special "integrated" sampling technique to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations that filed both Form 990 (Return of Organization Exempt From *Income Tax*) and Form 990-T. The integrated sampling program ensured that the Form 990-T sample included any unrelated business income tax returns filed by organizations whose Form 990 information returns were selected for the Statistics of Income (SOI) samples of charities (IR Code section 501(c)(3) organizations) and other tax-exempt organizations (IR Code section 501(c)(4) through (9) organizations).

The matched records provide the means for consistency in analyzing exempt-function and nonexempt-function income and expenses of organizations that are involved in unrelated business activities. Some of the articles included in this section have used the matched Forms 990 and 990-T to explore the extent to which various types of exempt organizations engage in unrelated business activities. Because of budget reductions, the Tax Year 1996 Form

Unrelated Business Income of Nonproft Organizations

990 sample was limited to include only the section 501(c)(3) charitable organizations for that year, therefore restricting the integrated portion of the Form 990-T sample to these types of organizations. The section 501(c)(4) through (9) returns were reinstated to the Form 990 sample for 1997 and later years, but the integrated portion of the Form 990-T sample remains based on section 501(c)(3) organizations only.

Up until Tax Year 1996, the types of organizations that were subject to the unrelated business income tax (UBIT) provisions included those described in sections 501(c)(2) through 501(c)(25), as well as qualified pension, profit-sharing, and stock bonus plans described in section 401(a), Individual Retirement Arrangements (IRA's) described in section 408(e), and cooperative service organizations described in sections 501(e) and 501(f). For 1997, the UBIT provisions additionally covered Medical Savings Accounts described in section 220(e), although none of these organizations were selected for the Form 990-T sample for that year. For 1998, the UBIT provisions added Roth IRA's described in section 408A, Qualified State Tuition Plans described in section 529(a), and Education IRA's described in section 530(a).

Program Developments

Beginning with Tax Year 1998, the Standard Industrial Classification (SIC)-based industry codes that Form 990-T filers used to describe their unrelated business activities were replaced with the North American Industry Classification System (NAICS) codes. New programming has been added to SOI's Form 990-T data entry ("editing") system to automatically change a SIC code reported on Form 990-T to a cross-referenced NAICS code. Another system enhancement aids data entry personnel in determining the correct IR Code section for an organization when the section reported by the taxpayer differs from that contained on the Internal Revenue Service's "Master File." An automated look-up list showing previously researched correct codes ensures consistency in statistics presented by type of organization across study years.

SOI's return processing system for the annual unrelated business income studies were converted to a Graphical User Interface (GUI) application, starting with Tax Year 1999. This application updated the editing system to a point-and-click windows environment, which is more user-friendly to the study "editors," who are responsible for entering information from the returns and resolving data inconsistencies and taxpayer reporting errors.

by Margaret Riley

onprofit organizations reported \$3.4 billion of gross income for 1991 from business activities that were considered unrelated to the purposes for which they received Federal income tax exemption. These 32,690 organizations reported total deductions of \$4.0 billion, resulting in an aggregate net loss of nearly \$0.7 billion. However, 14,384 of the organizations, ordinarily exempt from income taxation, reported "positive" unrelated business taxable income (UBTI) of \$431.1 million and a total tax liability of \$116.9 million.

Organizations filing a Form 990-T, Exempt Organization Business Income Tax Return, accounted for less than 3 percent of the population of tax-exempt organizations to which the unrelated business income tax provisions applied [1, 2]. Figure A shows the distribution of returns filed, by the Internal Revenue Code section under which the organizations received tax exemption [3]. Twenty-four percent of the filers were nonprofit charitable organizations that were tax-exempt under section 501(c)(3) and another 21 percent were social and recreational clubs exempt under section 501(c)(7) [4]. Together with business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6), and fiduciary agents for Individual Retirement Arrangements exempt under section 408(e), these four types of organizations accounted for nearly three-quarters of all returns filed. (See the Appendix to this article for a description of the various types of taxexempt organizations.)

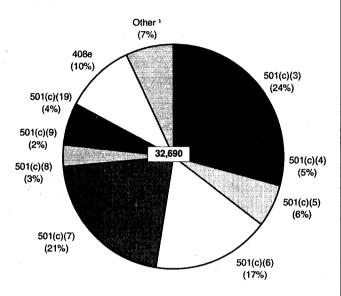

There were 14,819 "small" organizations, those with gross unrelated business income (UBI) between \$1,000 (the filing threshold) and \$10,000, which accounted for 45 percent of all filers (Figure B). Another 40 percent of filers, 12,987 organizations, had gross UBI of more than \$10,000 but under \$100,000. Only 1 percent of all filers, 433 organizations, had gross UBI of \$1,000,000 or more, but they accounted for nearly half of all gross UBI reported and 64 percent of total tax liability.

Although the number of organizations reporting unrelated business income grew by 5 percent between 1990 and 1991, these organizations collectively reported lower amounts of both gross UBI and total deductions (Figure C). However, an 11-percent increase in total positive taxable income between the two years contributed to a 17-percent increase in the unrelated business income tax (UBI tax). Total tax, which, in addition to the UBI tax, includes certain other taxes less allowable credits, increased by 18 percent (see the Explanation of Selected Terms section for a definition of total tax). Another factor contributing to

Margaret Riley is a statistician with the Foreign Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief

Figure A

Percentage Distribution of Exempt Organization Business Income Tax Returns, by Internal Revenue Code Section, Tax Year 1991

¹ Includes all other organizations tax exempt under Code sections 501(c)(2)-(25), as well as Code section 401(a), 501(e), and 501(f) organizations and returns not allocable by code section.

NOTES: Detail may not add to total because of rounding. See the Appendix to this article for a description of the various types of tax-exempt organizations.

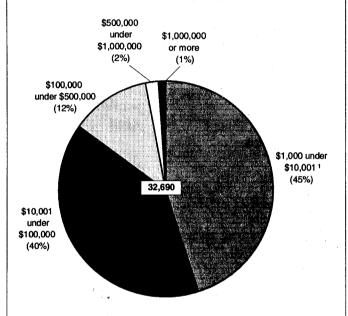

the rise in UBI tax and total tax was a change in the tax rates and related income brackets applicable to exempt trusts filing Forms 990-T for 1991. The tax on exempt trusts was raised for 1991 by lowering the ceiling on income brackets and by raising the tax rate on the highest bracket from 28 percent to 31 percent. There was no change in the tax rates applicable to exempt corporations, but both exempt corporations and trusts reported aggregate increases in average positive taxable income of 6 percent and 20 percent, respectively [5]. These increases resulted in "bracket creep" for some organizations, whereby higher taxable income increased the tax paid on the top portion of income. (See the Unrelated Business Taxable Income and Tax section of this article for additional statistics on exempt trusts and exempt corporations.)

Background

Congress established the "unrelated business income" tax as part of the Revenue Act of 1950. Unrelated business income has been defined as income from a trade or business that is regularly carried on by an exempt organization and is not substantially related to carrying out the

Figure B

Percentage Distribution of Exempt Organization Business Income Tax Returns, by Size of Gross Unrelated Business Income (UBI), Tax Year 1991

¹ Organizations with gross UBI under \$1,000 were not required to file a return. Organizations with gross UBI between \$1,000 and \$10,000 were not required to report detailed sources of income, as were organizations with gross UBI above \$10,000.

NOTE: Detail may not add to totals because of rounding.

exempt purpose for which the organization exists. The UBI tax was imposed regardless of whether or not the profits from the unrelated trade or business were used solely for exempt purposes. Originally, the tax applied only to organizations exempt under section 501(c)(3) (nonprofit charitable organizations), section 501(c)(5) (labor, agricultural, and horticultural organizations), section 501(c)(6) (business leagues, chambers of commerce, and real estate boards), section 501(c)(9) (voluntary employees' beneficiary associations), or section 501(c)(15) (certain mutual insurance companies). After it appeared that other types of tax-exempt organizations were engaging in unrelated business activities. Congress extended the UBI tax to all exempt organizations (except U. S. Government instrumentalities exempt under section 501(c)(1)), including churches [6].

For 1991, organizations which received \$1,000 or more from unrelated business activities were required to compute their taxable income on a Form 990-T. The taxation of UBI was designed to place unrelated activities of exempt organizations on an equal footing with similar activities carried out by taxable entities, such as non-exempt corporations. Although exempt organizations are taxed on their unrelated business taxable income, they are still able to enter into a wide range of nontaxable commercial activities if they are held to be substantially related to their exempt purpose(s) [7].

Section 501(a) of the Internal Revenue Code authorizes an exemption from taxation of income *related* to the exempt purpose of an organization. As indicated in the Appendix to this article, organizations that ordinarily were tax-exempt for 1991 but were subject to taxation on *unrelated* business income included those described in sections 501(c)(2) through 501(c)(25), as well as qualified pension, profit sharing, and stock bonus plans described in section 401(a); Individual Retirement Arrangements (IRA's) described in section 408(e); and cooperative service organizations described in sections 501(e) and 501(f).

For 1991, organizations with gross UBI under \$1,000 were not required to file a Form 990-T. The reasoning behind granting this filing exclusion is that a "specific deduction" of \$1,000 from taxable income is allowed to all Form 990-T filers, so there is no reason to burden organizations that had gross UBI of \$1,000 or less from filling out the tax return. (The specific deduction is discussed in the Deductions section and is defined in the Explanation of Selected Terms section.) Organizations with gross UBI between \$1,000 and \$10,000 were not required to report detailed sources of income, as were organizations with larger amounts of gross income. These smaller organizations were required only to report a single

¹ Excludes cost of sales and services, which was not included on the return as a component of total deductions. It was subtracted from gross receipts in computing gross profit from sales and services, reported as a gross income component. Cost of sales and services can include amounts attributable to depreciation, salaries and wages and other deductible items.

² Total tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

total of gross UBI. For a detailed list of the components of gross UBI reported by larger organizations, see the definition of gross UBI in the Explanation of Selected Terms section of this article. Separate explanations of the gross UBI components are also included in this section.

Income

The \$3.4 billion of gross UBI reported by tax-exempt organizations for 1991 included approximately \$0.1 billion attributable to organizations reporting gross UBI of \$10,000 or less and \$3.3 billion attributable to organizations reporting gross UBI over \$10,000. Because organizations with gross UBI of \$10,000 or less were not required to report detailed sources of gross UBI (only the total amount was required), the following discussions of the specific components of gross UBI (covered in this section) and their related expenses and deductions (covered in the Deductions section) pertain only to organizations with gross UBI above \$10,000, which accounted for over 98 percent of the total gross UBI reported by all organizations filing Form 990-T.

Gross profit (less loss) from sales of goods and services was the largest source of unrelated income for organizations with gross UBI above \$10,000 and accounted for 43 percent of all gross UBI reported (Figure D). "Other income" (less loss), which includes all types

of income not specifically required to be reported elsewhere on the unrelated business income tax return, was the second largest gross income item. About 90 percent of all gross UBI came from 5 of the 12 major components reported, the top 2 sources discussed above plus advertising income, "unrelated debt-financed income," and investment income (less loss) of organizations tax-exempt under sections 501(c)(7), (9), (17), and (20) (social and recreational clubs, voluntary employees' beneficiary associations, supplemental unemployment benefit trusts, and prepaid legal service funds, respectively). Organizations reported income sources fairly consistently between 1990 and 1991, with these five sources reported as the top income producers for the two years and accounting for 92 percent of gross UBI for 1990.

Figure D also shows unrelated business income sources for selected types of organizations, in terms of the Code section that described their exemption. Organizations classified in these five sections accounted for 86 percent of total gross UBI reported on returns with gross UBI over \$10,000. A look at the largest source of income for each of the selected types of organizations appears to be consistent with the way each group operates, as discussed below. (See the Appendix to this article for a description of the various types of exempt organizations and the general nature of their activities.)

N/A - Not applicable.

1 Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

Income from real property and personal property leased with real property.
 Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

Annuities, interest, rents, and royalties. NOTE: Column detail may not add to totals because of rounding.

Gross profit (less loss) from sales and services was the largest source of income for nonprofit charitable organizations exempt under section 501(c)(3), 52 percent; civic leagues and social welfare organizations exempt under section 501(c)(4), 66 percent; and social and recreational clubs exempt under section 501(c)(7), 66 percent. Many of these organizations typically are involved in operations which lend themselves to providing goods and services, such as a hospital providing commercial laboratory services to the general public or a country club selling food and beverages to nonmembers.

The main source of income for business leagues, chambers of commerce, and real estate boards, section 501(c)(6), was gross advertising income. It is common for these types of organizations to publish magazines and periodicals related to their trade that are of interest to their members. If the periodicals included advertising that was of a commercial nature, then the income derived from such advertising was subject to the unrelated business income tax. Fifty-six percent of these organizations' gross UBI was attributable to advertising income.

Voluntary employees' beneficiary associations, section 501(c)(9), reported investment income as their primary unrelated business income source, accounting for 75 percent of their total gross UBI. Given the nature of their tax-exempt purpose, to provide health and welfare benefits to association members, it would be expected that benefit plan monies would be invested to ensure future plan funding.

Deductions

As with the section on income, the following discussion of deductions pertains only to organizations with gross UBI over \$10,000 because organizations with smaller amounts of gross UBI were not required to report detailed sources of gross UBI and related deductions (only totals were required). Organizations with gross UBI over \$10,000 accounted for 98 percent of total deductions reported by all organizations filing Form 990-T.

Total deductions taken against gross unrelated business income can be divided into two categories: deductions "directly connected with UBI" and deductions "not directly connected with UBI." Ninety-five percent of all deductions taken were directly connected with unrelated business activities. In order for deductions to be allowed as directly connected with gross UBI in computing unrelated business taxable income, the expenses, depreciation, and similar items must have qualified as allowable income tax deductions under the tax law provisions applicable to taxable organizations, and they must have been directly connected with carrying on an unrelated trade or business.

When facilities or personnel were used both to carry on exempt functions and to conduct an unrelated trade or business, the directly connected deductions had to be allocated between the two uses.

Deductions that were considered not directly connected with UBI included the "specific deduction," charitable contributions, "set-asides," and "excess exempt expenses." The \$1,000 specific deduction was allowed after all other deductions were taken. Set asides were allowed to section 501(c)(7), (9), (17), and (20) organizations. Under the tax provisions of a set-aside, "passive" income (in general, investment income) was not taxed if it was set aside for charitable purposes or, in the case of the section 501(c)(9),

Organizations filing under 5 of the 28 applicable Code sections reported 86 percent of gross unrelated business income.

(17), and (20) organizations, if it was set aside for the payment of life, sickness, accident, or other benefits. Qualifying set-asides were reported on Form 990-T as a deduction from net investment income, the amount which remained after directly connected deductions were taken from gross investment

income. Some types of expenses related to exempt activity functions could be used to offset net advertising income and other "exploited exempt-activity income;" these were called excess exempt expenses. (See the Explanation of Selected Terms section for more detailed definitions of deductions not directly connected with UBI.)

Because of the way deductions were required to be reported on the Form 990-T, both total deductions and some of the detailed deduction components are somewhat understated in the figures and tables presented in this article. Form 990-T filers were instructed to deduct the cost of sales and services from their gross receipts from sales and services to compute gross profit, which was then required to be reported as a gross UBI detail item in the income statement.

As a consequence of this manner of reporting, cost of sales and services was not included in the deductions section of the income statement, resulting in an understatement of total deductions. Also, because cost of sales and services includes many of the same types of expenses that are reported as separate components of total deductions, some of the components also will be understated.

Another factor affecting the components of total deductions is the manner in which certain types of deductions were required to be reported on the various Form 990-T income schedules. Deductions that were connected with specified types of income, such as rental income, were

reported on schedules as lump-sum totals only. Some of the deductions included in these totals were of the same types as those reported elsewhere on the return as separate components of total deductions. Because detailed deduction components were not required to be reported on return schedules, there could be no linking of deductions with like titles between the schedules and the detailed deduction components. Therefore, the total amount shown for some of the separately reported deductions will be understated. For example, if deductions allocable to rental income, reported on a rental income schedule, included depreciation, then that amount of depreciation would not be included in, and could not be linked to, the separately reported depreciation deduction item. Deductions that were reported as lump-sum amounts included those "allocable to rental income," "allocable to unrelated debt-financed income," "allocable to investment income," "allocable to income from controlled organizations." "allocable to exploited exempt-activity income, except advertising," and "direct advertising costs" (see Table 7 for a complete presentation of deductions).

Figure E presents selected components of total deductions for all returns with gross UBI over \$10,000 and also for the same five types of organizations shown in Figure D. Organizations shown in Figure E collectively accounted for 86 percent of total deductions reported. As with income components, the allocation of deduction items varies across the selected Code sections and seems to be in line with the purposes for which the organizations received tax exemption. Most of the total deductions reported for 1991 by organizations with gross UBI over \$10,000 can be attributed to "other deductions" (30 percent), "net operating loss carryover" (19 percent), salaries and wages (15 percent), and direct advertising costs (10 percent), which together accounted for 75 percent.

"Other deductions," the largest single aggregate deduction item reported, included a host of expenses that were not required to be reported as a specific item elsewhere on the return. Some examples of "other deductions" items are professional service fees, such as financial management, accounting, legal, and consulting; insurance (if not

¹ Excludes cost of sales and services, which was not included on the return as a component of total deductions. It was subtracted from gross receipts in computing gross profit from sales and services, reported as a gross income component. Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and other deductible items.

² "Other deductions" was a specific Form 990-T item that included types of deductions that were not required to be reported elsewhere on the return. "Deductions directly connected not shown above" was not a specific return item. It contains the balance of reported deduction types that are not being presented as selected deductions in this figure. See Table 7 for a complete presentation of deductions directly connected to gross UBI.

NOTE: Column detail may not add to totals because of rounding.

employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, and security services; rent; travel expenses; educational expenses; and utilities.

Section 501(c)(3) and (4) organizations reported the largest proportion of their deductions as "other deductions" on their returns (37 percent and 32 percent, respectively). Their second largest deduction was the net operating loss carryover (19 percent and 25 percent, respectively). For section 501(c)(3) organizations, the third largest deduction was salaries and wages (18 percent). These organizations accounted for the largest proportion of aggregate salaries and wages reported by organizations with gross UBI over \$10,000, 61 percent of the total. Direct advertising costs was the third largest deduction for section 501(c)(4) organizations, closely followed by salaries and wages (13 percent and 12 percent, respectively).

For organizations exempt under section 501(c)(6), direct advertising costs accounted for the largest proportion of their reported deductions (30 percent). Second was

43 percent of Form 990-T filers reported total tax of \$116.9 million. the net operating loss carryover (18 percent), and third was "other deductions" (17 percent). In addition to being their largest deduction item, the direct advertising costs of these organizations accounted for the largest portion of the direct advertising costs reported on all Forms 990-T filed

by exempt organizations with gross UBI over \$10,000, 53 percent of the total.

The social and recreational clubs exempt under section 501(c)(7) reported 35 percent of their total deductions as salaries and wages. This would be expected, given the labor-intensive nature of their unrelated business activities. "Other deductions" was the second largest item (21 percent), and the net operating loss carryover was third largest (19 percent).

Sixty-three percent of the total deductions of section 501(c)(9) associations was attributable to set-asides. Because the primary tax-exempt mission of these organizations is to provide health and welfare benefits to its members, the large amounts of income that typically are set aside for future payment of these benefits are allowed as a deduction against investment income, their primary source of gross UBI [8]. "Other deductions" ranked second in size, 12 percent of total deductions. Third place was equally shared by interest and taxes, with each contributing 5 percent (interest and taxes are not shown separately in Figure E because of their relatively small

size for organizations exempt under sections other than section 501(c)(9)).

Unrelated Business Taxable Income and Tax

For 1991, about 43 percent of Form 990-T filers, an estimated 13,905 organizations, reported total tax of \$116.9 million. In most cases, the largest share of total tax was the UBI tax; however, total tax also could have included recapture taxes (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax," and the environmental tax. Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits were subtracted from the unrelated business income tax in computing total tax.

An estimated 18,785 filers, or 57 percent, reported no total tax liability. Organizations with \$1,000,000 or more of gross UBI, only slightly more than 1 percent of the population reporting total tax, reported a tax liability of \$74.9 million, 64 percent of the tax liability of all organizations. Only 2 percent of total tax, \$2.4 million, was reported by the small organizations that were not required to report detailed income items, those with gross UBI between \$1,000 and \$10,000, yet they comprised a large proportion, 45 percent, of the taxpaying population. Another 40 percent, those organizations with gross UBI more than \$10,000 but less than \$100,000, accounted for 11 percent, or \$13.1 million, of the total tax reported. The remaining group of filers, those with gross UBI of at least \$100,000 but less than \$1,000,000 reported total tax of \$26.5 million, 23 percent of aggregate total tax. The organizations in this group accounted for 14 percent of the population reporting total tax liability.

Based on unrelated business taxable income, the 13,908 exempt organizations reporting UBI tax incurred an aggregate UBI tax liability of \$116.6 million. After adjustments were made for additional taxes (plus \$0.6 million) and credits (minus \$0.3 million), the resulting amount of total tax liability was \$116.9 million, as reported by 13,905 organizations. The difference between the 13,905 organizations with total tax and the 13,908 with UBI tax resulted from there being 37 returns on which total tax was attributable to one of the taxes other than the UBI tax, and 41 returns where UBI tax was reported, but was offset by tax credits (13,908 plus 37 minus 41 equals 13,904) [9].

For 1991, there were 14,384 organizations that reported positive UBTI, amounting to \$0.4 billion; the remaining 18,306 filers reported zero or a deficit, amounting to -\$1.1 billion. Even though there were 14,384 organizations that reported positive UBTI, the number of

organizations showing UBI tax on their returns was 13,908, or 476 less than might otherwise be expected. The explanation for this is that there were 524 organizations which had positive amounts of taxable income but reported no UBI tax, and there were 49 organizations that reported UBI tax even though they had no taxable income (13,908 plus 524 minus 49 equals 14,383) [10].

The tax statistics cited above are based on originally filed returns that were selected prior to IRS audit examination and prior to the filing of any amended returns. Recomputation of the tax resulting from taxpayer errors detected after filing, either by the filing organization or through IRS data checks, has not been taken into account. Therefore, the amount of tax actually assessed and collected may be different from the amount initially reported and presented in this article.

Of the 32,690 exempt organizations which filed Forms 990-T, 27,539 exempt corporations accounted for 92 percent of the \$3.4 billion of total gross UBI while 5,151 exempt trusts accounted for the remainder. There were 11,348 exempt corporations and 2,560 exempt trusts that reported the UBI tax on their returns for 1991, compared

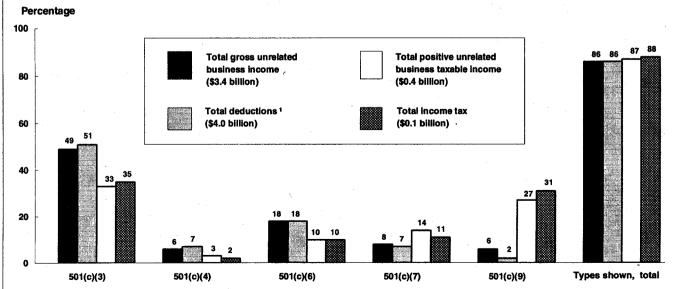

Figure F

to 11,378 corporations and 2,527 trusts that reported total tax. Corporations were liable for \$70.2 million, 60 percent, of UBI tax, and trusts were liable for \$46.4 million, 40 percent. Corporate and trust total tax liability amounted to \$70.5 million and \$46.4 million, respectively.

Of all Form 990-T filers for 1991, section 501(c)(3) organizations were responsible for the largest share (35 percent) of total tax reported, \$40.6 million. Together, organizations exempt under sections 501(c)(3), (4), (6), (7), and (9) accounted for 88 percent of total tax reported. Figure F shows a percentage distribution of the respective shares of gross UBI, total deductions, positive UBTI, and total tax attributable to these five types of organizations. Collectively, these organizations filed 69 percent of the Forms 990-T, and accounted for between 86 and 88 percent of the totals reported by all organizations for the key items shown in Figure F.

Voluntary employees' beneficiary associations described in section 501(c)(9) were responsible for 31 percent of total tax reported, a high percentage given the fact that they accounted for only 2 percent of all filers and 6 percent of total gross UBI. In addition, the share of total

Selected Financial Data Reported by Principal Types of Organizations as a Percentage of the Total Reported by All Types of Organizations, Tax Year 1991

Type of Organization, by Internal Revenue Code Section

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services, which was not included on the return as a component of total deductions. It was subtracted from gross receipts in computing gross profit from sales and services, reported as a gross income component. Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and other deductible items.

positive UBTI attributable to section 501(c)(9) organizations was 27 percent, but these organizations accounted for only 2 percent of organizations that reported positive UBTI. Voluntary employees' beneficiary associations generally were not able to take deductions as large as most other types of organizations because of the nature of their exempt activities, discussed below.

Section 501(c)(9) organizations primarily engage in investment activities in order to fund the benefits paid out to member-employees. Nearly 75 percent of their aggregate gross UBI was reported as investment income for 1991. As mentioned in the discussion of deductions, the largest deduction item, by far, reported by employees' beneficiary associations was for amounts set aside to provide for future payment of life, sick, accident, or other benefits. However, if amounts were set aside that exceeded the qualified asset account limits, as specified in section 419A of the Code, then they were not allowed as a deduction from unrelated business investment income. In other words, if a section 501(c)(9) association overfunded an employee welfare benefit plan, its investment income could not be set aside tax-free. It was taxable as unrelated business income.

Another factor contributing to the relatively small deductions taken by the employee beneficiary associations is that, for many of them, their investment portfolios typically are overseen by a single trust manager. Because there is no need for a staff of employees, deductions for salaries and wages are quite small. In terms of contrast, salaries and wages reported by section 501(c)(9) associations were less than half a percent of total salaries and wages reported by all organizations, compared to 61 percent for the section 501(c)(3) organizations. As a percentage of the total deductions reported by these two types of organizations, salaries and wages comprised a 2-percent share for the section 501(c)(9) organizations compared to an 18-percent share for section 501(c)(3) organizations [11].

Primary Unrelated Business Activity by Industrial Grouping

Organizations filing a Form 990-T for 1991 were required to enter at least one, and up to three, industry codes for their principal business activities, based on the amount of gross unrelated business income they generated. If an organization engaged in more than one type of activity, it was instructed to list the code for the largest unrelated activity (in terms of gross income) first, then the codes for the next two largest activities, in descending order. The discussion of unrelated business activities that follows takes into consideration only the primary (first) activity

Services and finance, insurance, and real estate accounted for 78 percent of gross unrelated business income.

code reported. Because it is not possible to distribute gross UBI by each type of activity when more than one activity was reported, the amount of gross UBI assigned to the primary unrelated business activity may not be entirely related to that activity.

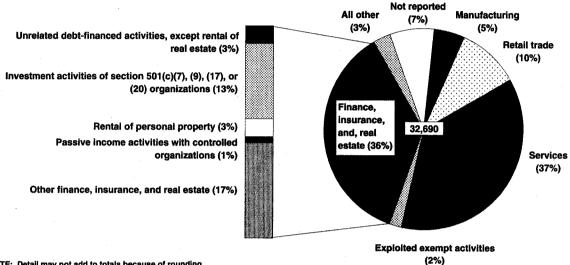

Figure G shows that the primary unrelated business activity reported on 88 percent of returns filed fell within four major industrial groupings: manufacturing; retail trade; services; and finance, insurance, and real estate (see Table 5 for information on the major business activities or industrial classifications reported). These four industrial groupings were also responsible for 93 percent of total gross UBI, with manufacturing producing \$0.1 billion; retail trade, \$0.4 billion; services, \$1.5 billion; and finance, insurance, and real estate, \$1.1 billion.

The industrial classifications from which Form 990-T filers were required to make a choice included 155 industry codes and 5 additional categories that were established specifically for exempt organizations engaging in unrelated business activities to reflect particular provisions of the Internal Revenue Code [12]. These five classifications were unrelated debt-financed activities other than rental of real estate; investment activities of section 501(c)(7), (9), (17), and (20) organizations; rental of personal property; passive income activities with controlled organizations; and exploited exempt activities. In Figure G and Table 5, the first four activities mentioned above are treated as part of the finance, insurance, and real estate division. Exploited exempt activities is treated separately in Figure G and Table 5 as one of the major industrial groupings [13].

There were 1,495 organizations that reported unrelated activities in the manufacturing division. Most of them, 87 percent, could be categorized under two types of unrelated activities: printing and publishing, 45 percent, and petroleum refining and related industries, 42 percent [14]. Three percent of total gross UBI was attributable to the printing and publishing industrial sub-group. Petroleum refining and related industries accounted for only one-tenth of 1 percent of total gross UBI. Business leagues, real estate boards, and various types of nonprofit charitable organizations accounted for most of the printing and publishing carried on by tax-exempt organizations as their principal unrelated trade or business activity. Almost all of the organizations that reported petroleum refining and related industries as their principal unrelated business activity were trusts that acted as fiduciary agents for Individual Retirement Arrangements and profit-sharing plans.

Figure G

Percentage Distribution of Exempt Organization Business Income Tax Returns, by Principal Unrelated Business Activity or Industry, Tax Year, 1991

NOTE: Detail may not add to totals because of rounding.

Within retail trade, carried on by 3,372 exempt organizations, activities that were included in the eating and drinking places sub-group were reported on the majority of Forms 990-T filed, 65 percent, followed by "miscellaneous" retail trade, reported on 32 percent of the returns. Three of the main types of retail activities reported under "miscellaneous" were gift, novelty, and souvenir shops; drugstores and proprietary stores; and book stores. Organizations reporting primary unrelated business activities within the eating and drinking places and "miscellaneous" retail trade sub-groups respectively accounted for 6 percent and 4 percent of the \$3.4 billion total of gross UBI reported by all Form 990-T filers. Organizations operating eating and drinking places as an unrelated activity mainly were hospitals, golf and country clubs, fraternal organizations, and veterans' organizations.

Of the 12,040 organizations providing various services as their primary unrelated activity, 53 percent reported business services, most of which was advertising (including printing), and another 21 percent reported amusement and recreation services. Health services and social services followed, respectively accounting for 7 percent and 5 percent of organizations reporting services. In terms of gross UBI, business services accounted for 19 percent of the aggregate total. The business service of advertising (including printing) was reported on more returns than any other single unrelated business activity, 17 percent of the total, and, in dollar terms, its \$0.5 billion share of total gross UBI, 15 percent, was also the largest single primary activity. The majority of organizations that indicated advertising as their primary unrelated business activity were chambers of commerce, real estate boards, and a wide variety of nonprofit charitable organizations, civic leagues, and business leagues. About 8 percent of total gross UBI was attributable to organizations classified in amusement and recreation services. These types of activities were reported mostly by golf and country clubs; civic leagues; social welfare organizations; fraternal organizations; veterans' organizations; and nonprofit charitable societies, associations, and guilds. These nonprofit charitable organizations typically were educational institutions and athletic clubs.

The health services sub-group was responsible for 7 percent of total gross UBI; within this group, the medical laboratory activity was reported most often and accounted for 4 percent of the total gross UBI reported by all organizations. Organizations reporting some type of health services as their primary unrelated business activity typically included hospitals, medical centers, and health care facilities. Social services contributed about 1 percent to total gross UBI. A mix of organization types reported primary unrelated business activities in the social services sub-group; most of them were religious organizations, hospitals, schools, fraternal organizations, and veterans' organizations.

Investment activities of organizations exempt under

sections 501(c)(7), (9), (17), and (20) accounted for 46 percent of the 11,862 organizations engaged in unrelated activities in the finance, insurance, and real estate industrial group. Organizations engaging in real estate activities accounted for another 28 percent, followed by those engaged in insurance activities, accounting for 10 percent. These latter two activities are included in the "other finance, insurance, and real estate" category. Collectively, the three finance, insurance, and real estate subgroups mentioned above accounted for 30 percent of the gross UBI reported by all exempt organizations, with each sub-group separately contributing between 9 percent and 11 percent to total gross UBI. The majority of organizations that carried on real estate activities were nonprofit charitable organizations; however, large numbers of civic and business leagues, real estate boards, fraternal organizations, and trusts acting as fiduciary agents for retirement funds also reported real estate as their primary unrelated business activity. Most of the organizations that engaged in unrelated activities in the insurance industry were county farm bureaus and trade associations.

Summary

For 1991, an estimated 32,690 tax-exempt organizations reported \$3.4 billion in gross income from unrelated business activities. Nearly half of total gross UBI was reported by only 1 percent of these organizations, those with gross UBI of \$1,000,000 or more. Total deductions taken against gross UBI amounted to \$4.0 billion and resulted in unrelated business taxable income (less deficit) of -\$ 0.7 billion. Based on total positive unrelated business taxable income of \$431.1 million, total tax reported was \$116.9 million.

Five types of organizations collectively accounted for most of the unrelated business activity in terms of gross UBI, total deductions, and total tax. These were the nonprofit charitable organizations exempt under Code section 501(c)(3); civic leagues and social welfare organizations exempt under section 501(c)(4); business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6); social and recreational clubs exempt under section 501(c)(7); and voluntary employees' beneficiary associations exempt under section 501(c)(9). Together, these organizations accounted for 69 percent of all returns filed, 86 percent of gross UBI, 86 percent of total deductions, and 88 percent of total tax liability.

About 90 percent of all gross UBI was attributable to five sources. Gross profit (less loss) from sales and services was the largest source, accounting for 43 percent of gross UBI. This was followed by "other income" (items not specifically required to be reported elsewhere

on the return) (20 percent), advertising income (17 percent), income from unrelated debt-financed property (7 percent), and investment income of section 501(c)(7), (9), (17), and (20) organizations (each described in the Appendix to this article) (6 percent).

Forty-four percent of organizations reporting gross UBI above the \$1,000 filing threshold had positive unrelated business taxable income. The remaining 56 percent reported zero or a deficit. The \$116.9 million of total tax liability was distributed among various types of organizations. Corporate organizations accounted for \$70.5 million of total tax, or 60 percent, and trusts were liable for \$46.4 million, or 40 percent. In terms of the Internal Revenue Code sections under which organizations are taxexempt, the nonprofit charitable organizations described in section 501(c)(3) were responsible for the largest share of total tax, 35 percent or \$40.6 million. They were followed by section 501(c)(9) voluntary employees' beneficiary associations, which reported a 31-percent share of total tax, \$36.0 million.

Four major industrial groupings, covering 88 percent of the organizations that reported unrelated business income. accounted for 93 percent of gross UBI, 92 percent of total deductions, and 95 percent of total tax. The four groupings were manufacturing; services; finance, insurance, and real estate; and retail trade. Within these industrial classifications, the unrelated business activities that collectively produced a relatively large share of total gross UBI, 77 percent, were business services (most of which was advertising, including printing), 19 percent; insurance activities. 11 percent; real estate activities, 10 percent; investment activities of section 501(c)(7), (9), (17), and (20) organizations, 9 percent; amusement and recreation services, 8 percent; health services, 7 percent; operation of eating and drinking places, 6 percent; "miscellaneous" retail trade, 4 percent; and printing and publishing, 3 percent.

Data Sources and Limitations

Sources

The statistics in this article are based on a sample of the 1991 Form 990-T, Exempt Organization Business Income Tax Return. The Internal Revenue Service (IRS) required organizations having accounting periods beginning in 1991 (and, therefore, ending between December 1991 and November 1992) to file a 1991 Form 990-T. Because of the various accounting periods of the organizations filing a 1991 Form 990-T, the unrelated business financial activities covered in this article span the period January 1991 through November 1992, although the majority of activities occurred during Calendar Year 1991. The sample included only those returns with gross unrelated

business income of \$1,000 (the filing threshold) or more.

The population from which the 1991 sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1992 and 1993. The returns in the sample were stratified based on the absolute value of either gross UBI (if the organization reported gross UBI of \$10,000 or less), or net UBI (if the organization reported gross UBI over \$10,000). For 1991, gross UBI was not reported as a single total by organizations that had gross UBI over \$10,000; rather, detailed components of the total were reported separately on the main part of the return and associated schedules. Only net UBI (gross UBI minus any deductions directly connected with UBI that were reported on the return and its attached schedules) was reported as a total on the Form 990-T. Therefore, for these larger returns, only total net UBI was input to the IRS Business Master File system. A sample of 4,885 returns was selected from a population of 40,950 [15]. Sampling rates ranged from 2.9 percent (returns with an absolute value of gross or net UBI less than \$10,000) to 100 percent (returns with an absolute value of net UBI of \$100,000 or more).

Limitations

Because gross UBI for the larger returns was not readily available as a criterion for selecting the sample, the net amount was used. It was possible, therefore, for a return with a large amount of gross UBI not to be selected because, after deductions, the *net* amount was small enough for it to be subject to sampling at a rate of less than 100 percent.

Research was undertaken for 1989 to determine the extent to which the returns of large organizations, in terms of gross UBI, did not get selected for the Statistics of Income (SOI) sample because net UBI was used as the sampling criterion. If a Form 990-T was not selected for the sample (net UBI under \$100,000) and it was filed by an exempt organization which reported large gross receipts (\$10,000,000 or more) on Form 990, Return of Organization Exempt From Income Tax, the Form 990-T was secured and classified into one of five groups, based on size of gross UBI [16]. The results of classifying 1,153 such returns are as follows: under \$500,000 -- 1,064 returns; \$500,000 under \$1,000,000 -- 26 returns; \$1.000.000 under \$5.000.000 -- 55 returns: \$5.000.000 under \$10,000,000 -- 5 returns; \$10,000,000 or more -- 3 returns.

Of the eight cases within the two largest UBI groups, five had qualified set-aside deductions which reduced net income to zero, and three had circulation losses or advertising costs which offset gross advertising income to the extent that the resulting net UBI was negative or near

zero. The combined amount of gross UBI for the eight returns was \$122.1 million, which was about 4 percent of total gross UBI reported for 1989. The research done for 1989 was not repeated for 1990 or 1991. Because the same basic sample design was used for all three years, the net UBI sampling criterion presumably effected the 1990 and 1991 statistics to a degree similar to that for 1989. Beginning with Tax Year 1992, net vs. gross UBI was no longer an issue for sampling because the Form 990-T was revised to require the reporting of total gross UBI by all organizations.

Only the primary activity code was used in the statistics to present the types of unrelated business activities for exempt organizations. In addition to the primary activity code, up to two other codes could have been reported if the organization engaged in more than one unrelated activity. However, because income was not reported separately by activity code if the organization entered more than one code, it was not possible to distribute gross UBI by type of activity when more than one business activity was reported. Therefore, where more than one code was provided, the statistics show all of gross UBI assigned to the primary code given.

The data presented were obtained from returns as originally filed with the IRS. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment, were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure H shows CV's for selected financial data. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix in this issue.

Figure H

Coefficents of Variation for Selected Financial Data Items, Tax Year 1991

ltem	Coefficient of variation (percentages)
Gross unrelated business income (UBI)	2.83
Total deductions	3.04
less deficit	9.15
Total income tax	3.65

Explanation of Selected Terms

Advertising Income.—Income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of exploited exempt activity income. (See the definition of Exploited Exempt Activity Income, below.)

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt under sections 501(c)(7), (9), (17), and (20)), each described in the Appendix to this article, are not taxed on the net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income.

Deductions Directly Connected With Unrelated Business Income. -- These were deductions allowed in computing unrelated business taxable income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to the carrying on of an unrelated trade or business. Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported all deductions (both deductions directly connected with UBI and those not directly connected, defined below) as a single total amount, except for the "specific deduction" (also defined below). Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debtfinanced income; those directly connected with investment income of Code section 501(c)(7), (9), (17), and (20) organizations (each described in the Appendix to this article); those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; and deductions for compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (not reported elsewhere); depletion; contributions to deferred compensation plans; employee benefit programs; and "other deductions."

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-

asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported by all organizations; the other types of deductions not directly connected with UBI were reported separately only by exempt organizations with gross UBI above \$10,000. (See the definitions of Set-asides, Excess Exempt Expenses, and the Specific Deduction, below.)

Excess Exempt Expenses .-- Two types of "excess" expenses were allowed as a deduction from unrelated business income: (1) excess exempt expenses attributable to commercial exploitation of exempt activities and, (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the definition, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity.

In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising .--In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial way. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income they produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the definition of Advertising Income).

Gross Profit (Less Loss) from Sales and Services.--This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, a section 501(c)(7) social club would report its gross restaurant and bar receipts from nonmembers as gross profit (less loss), but would report its investment income on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts or sales, less returns and allowances, minus cost of goods sold.

Gross Unrelated Business Income (UBI) .-- This was the total gross unrelated business income (see the definition of Unrelated Business Income), prior to reduction by allowable deductions, used in computing unrelated business taxable income. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported gross UBI as a single total amount. Organizations with gross UBI above \$10,000 were required to report detailed sources of gross UBI. The components of gross UBI were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss) from noncapital assets; net capital loss (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Code section 501(c)(7), (9), (17), and (20) organizations (each described in the Appendix to this article); annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income."

Income from Controlled Organizations.--When an exempt organization controls another organization, the interest, annuities, royalties, and rents from the controlled organization are taxable to the controlling organization at a specified ratio, depending on whether the controlled organization is exempt or nonexempt.

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).-- This item was reported by organizations exempt under sections 501(c)(7), (9), (17), and (20) (each described in the Appendix to this article) and included income such as rents, unrelated debtfinanced income, and income from the ownership or sale of securities. Organizations exempt under sections other than 501(c)(7), (9), (17), and (20) did not report investment income as a single amount; rather, they were re-

quired to report separately the various types of investment income that were considered unrelated business income, such as rents and income from debt-financed property. (See, also, the definition of Set-asides.)

Net Capital Loss Deduction (Trusts Only).--If an exempt trust had a net capital loss, it was subject to a \$3,000 limitation. Trusts were required to report net capital losses on Form 990-T as a component of gross unrelated business income.

Net Gain (Less Loss), Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

Net Operating Loss Carryover.--The net operating loss carryover (as provided in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. The statistics in this article represent only the net operating carryover because carrybacks from future years would not be reported on the return as initially filed (they would be reported on an amended return), which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are professional service fees, such as financial management, accounting, legal, or consulting; insurance costs (if not employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income.—This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are returned contributions that were deducted in prior years, income from insurance activities that was not properly set aside in prior years, recoveries of bad debts, and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Rental Income.—This was the amount of (1) rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property,

or (2) rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, rents from real property generally were excluded in computing unrelated business taxable income. In addition, rents from personal property that did not exceed 10 percent of the total rents from all leased property were also excluded. These exclusions for rents did not apply to unrelated debt-financed property or rents received from a controlled organization. (See definitions of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.--These amounts were allowed to social clubs (Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), supplemental unemployment benefit trusts (section 501(c)(17)), and group legal services organizations (section 501(c)(20)) as a deduction from investment income when passive income (generally, investment income) was set aside for one of the following described purposes: (1) the passive income of section 501(c)(7), (9), (17), and (20) organizations generally was not taxed if it was set aside to be used for charitable purposes; (2) in the case of section 501(c)(9), (17), and (20) organizations, passive income was generally not taxed if it was set aside to provide for the payment of life, sick, accident, or other benefits. However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations which had positive taxable income after all other types of deductions were taken. If positive taxable income was less then \$1,000, then an organization could take a specific deduction equal to its taxable income.

Total Tax.--Total tax was the unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the environmental tax.

Unrelated Business Income.--Income of an exempt organization that was from a trade or business which was

regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on unrelated business taxable income (UBTI). It was determined based on the corporate or trust tax rates that were in effect for the 1991 Tax Year.

Unrelated Business Taxable Income (UBTI).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other deductions not directly connected (see definitions of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income).

Unrelated Debt-financed Income .-- Income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debt-financed property and the gain treated as unrelated debt-financed income. Income from debtfinanced property did not include rents from personal property (e.g., computers or furniture leased with real property), certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income.

Notes and References

- [1] Based on a total of 1,053,407 exempt organizations reported in the Internal Revenue Service Annual Report, Fiscal Year 1991. The total excludes farmers' cooperatives and nonexempt charitable trusts treated as exempt organizations, which do not report tax on the Form 990-T. Also, the total is understated because it excludes churches, exempt under section 501(c)(3), which did not formally request recognition of tax exemption (because they are not required to do so unless they wish to obtain an IRS ruling). However, these churches are required to file Form 990-T if they have unrelated business income. Because of the understatement of the total number of exempt organizations, the proportion of all exempt organizations that filed a Form 990-T is lower than 3 percent.
- [2] Returns filed by organizations with gross unrelated business income (UBI) below the filing requirement threshold (less than \$1,000) are excluded from the statistics presented in this article.
- [3] For the most recent annual data on tax-exempt organizations, see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1990," Statistics of Income Bulletin, Fall 1994, Volume 14, Number 2, pp. 132-138, and Nutter, Sarah, "Private Foundations and Charitable Trusts, 1991," Statistics of Income Bulletin, Winter 1994-1995, Volume 14, Number 3, pp. 141-161. Other data on tax-exempt organizations and charitable giving for the years 1974-1992 have been published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2.
- [4] The term "charitable" refers to tax-exempt activities which are charitable, educational, scientific, social, literary or religious in nature.
- [5] Statistics contained in this article on exempt trusts and exempt corporations filing Form 990-T are from unpublished Statistics of Income tabulations.
- [6] Churches, which are tax-exempt under Code section 501(c)(3), are not required to apply for recognition of exemption unless they wish to obtain an IRS ruling. These organizations must file a Form 990-T if they have unrelated business income, but they are not required to file the annual IRS information return, Form 990, Return of Organization Exempt From Income Tax.

- [7] For detailed information on unrelated business income tax provisions, see Internal Revenue Service, *Tax on Unrelated Business Income of Exempt Organizations*, Publication 598 (Rev. 11/87).
- [8] Set-asides were not reported by section 501(c)(3), (4), or (6) organizations. They were a deduction allowed only to section 501(c)(7), (9), (17), and (20) organizations (see the Appendix to this article for a description of these organizations). For 1991, set-asides were reported only by section 501(c)(7) and (9) organizations, with the section 501(c)(9) organizations accounting for 98 percent of the total.
- [9] Detail does not add to total because of rounding.
- [10] Ibid.
- [11] Statistics cited here on salaries and wages are for organizations that had gross UBI greater than \$10,000 and were therefore required to report detailed deduction items. Organizations with \$10,000 or less of gross UBI were required to report a single amount of total deductions and the specific deduction only. Also, the salaries and wages deduction is somewhat understated because this type of deduction also was included in cost of sales and services and in the lump-sum deductions reported on the various income schedules to the tax return and, therefore, could not be tabulated separately. However, deductions for salaries and wages for the 501(c)(9) organizations were relatively small, regardless of where they were reported.
- [12] The total of 160 industry classifications were combined to form the 10 major groupings shown in Table 5. See Office of Management and Budget, Standard Industrial Classification Manual, 1972 and 1987, which list all of the 4-digit industry codes used by Form 990-T filers, except for the five additional categories that reflected certain provisions of the Internal Revenue Code pertaining to exempt organizations.
- [13] When an exempt organization commercially "exploits" the goodwill or other intangibles that are created by its exempt activities, and the commercial activities do not contribute significantly to the accomplishment of its exempt-purpose functions, the income generated by the commercial activities is considered "exploited exempt activity income" and is subject to the UBI tax. Examples of exploited exempt activities would be product endorsements and the sale of commercial advertising in a publication

- that is printed to promote the exempt purpose of an organization. (See the definitions of Advertising Income and Exploited Exempt Activity Income in the Explanation of Selected Terms section.)
- [14] Most of the data in this section on industry subgroups are from unpublished Statistics of Income tabulations.
- [15] After excluding returns that were selected for the sample but had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a tax year other than 1991, the estimated

- population was 32,690.
- [16] It was assumed that gross UBI reported by an exempt organization on Form 990-T could never be more than gross receipts reported by the organization on Form 990 because gross receipts includes both related, exempt function income and unrelated business income. Securing the Form 990-T filed by an organization which had gross receipts of \$10,000,000 or more ensured that any Form 990-T which reported gross UBI of \$10,000,000 or more and was not selected for the sample would be included in the classification.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services, which was not included on the return as a component of total deductions. It was subtracted from gross receipts in computing gross profit from sales and services, reported as a gross income component. Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and other deductible items.

² Total tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

NOTE: Detail may not add to totals because of rounding.

¹ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only a total for gross UBI. Organizations with gross UBI over \$10,000 were required to report each income item, as shown in columns 7 through 30.

NOTE: Detail may not add to totals because of rounding.

² Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

³ Income from real property and personal property leased with real property.

⁴ Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

 $^{^{\}rm 5}$ Annuities, interest, rents, and royalties.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services, which was not included on the return as a component of total deductions. It was subtracted from gross receipts in computing gross profit from sales and services, reported as a gross income component. Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and other deductible items.

² Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only a total for deductions (except for the specific deduction, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each deduction separately, as shown in columns 12 through 57.

³ This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁴ Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

Appendix

IRC section	Description of organization	General nature of activities
	(1)	(2)
401(a)	Qualified pension, profit sharing, and stock bonus plans	Fiduciary agent for pension, profit sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of th class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare, charitable, educational, or recreational activities
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is t improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness, accide or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, sickness, or accident benefits t members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State chartered credit unions and mutual reserve funds	Providing loans to members

Appendix Types of Exempt Organizations Subject to the Unrelated Business Income Tax Provisions--Continued

IRC section	Description of organization	General nature of activities
	(1)	(2)
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(20)	Prepaid legal service funds ¹	Providing legal services exclusively to employees
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liabilit for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employee pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit sharing, or stock bonus plans; or governmental units
501(e)	Cooperative hospital service organizations	Performing cooperative services for exempt hospitals
501(f)	Cooperative service organizations of operating educational organizations	Performing collective investment services for exempt educational organizations

¹ Beginning with tax years after June 30, 1992, section 501(c)(20) organizations were no longer tax-exempt.

by Margaret Riley

n extensive revision of the Tax Year 1992 Form 990-T, Exempt Organization Business Income Tax Return, introduced a change in reporting requirements, and this may be the chief reason for an overall 5-percent drop in the number of returns filed, from 32,690 for 1991 to 31,122 for 1992. However, the drop in the number of filers did not adversely affect the growth of the four major financial items for 1992: \$4.1 billion of gross "unrelated business income" (UBI), up 20 percent from 1991; \$5.2 billion of total deductions, up 28 percent; and \$485.9 million of "unrelated business taxable income" (UBTI) and \$132.4 million of total income tax, each up 13 percent [1].

Only 3 percent of the more than 1 million population of tax-exempt organizations to which the UBI tax provisions applied filed Tax Year 1992 Forms 990-T to report income from unrelated business activities [2]. The proportion of organizations reporting UBI was the same for Tax Year 1991.

Effect of Tax Year 1992 Reporting Requirement Changes

Tax-exempt organizations with gross UBI of \$10,000 or less, which accounted for 40 percent of all filers, were largely responsible for the 5-percent decrease in total Form 990-T filings (Figure A) [3]. They filed 16 percent fewer returns between 1991 and 1992. These smaller organizations were required for the first time to report itemized sources of gross unrelated business income, rather than the single total amount required previously [4]. (For a listing of these itemized sources, see the definition of gross UBI in the Explanation of Selected Terms section; see, also, the individual definitions of each source.)

The 16-percent decrease in the number of returns filed by smaller organizations likely was an effect of the new requirement for 1992 to calculate and report the detailed sources of gross UBI. The main purpose of the Form 990-T revision was to improve the accuracy of the information reported, by making the reporting format similar to other Federal business income tax forms and by providing the smaller organizations with a specific format for itemizing and computing gross UBI. In the absence of a specific format prior to 1992, it generally was not known how smaller organizations determined if their gross UBI was \$10,000 or less, which, in turn, allowed them to bypass the more detailed income and deduction sections of the return. With the requirement to follow an explicit itemization format,

Margaret Riley is a statistician in the Special Studies and Publications Branch. This article was prepared under the direction of Michael Alexander, Chief, Special Projects Section.

Figure A

Selected Financial Data from Exempt Organization Business Income Tax Returns, Tax Years 1990-1992

[Money amounts are in thousands of dollars]

ltem	1990	1991	1992
	(1)	(2)	(3)
Number of returns, total	31,091	32,690	31,122
Number with gross unrelated business			
income (UBI) of \$10,000 or less	13,274	14,819	12,400
Number with gross UBI over \$10,000	17,817	17,871	18,722
Gross UBI	3,511,499	3,384,698	4,069,149
Total deductions	4,143,101	4,047,183	5,182,551
Unrelated business taxable income (UBTI)			
less deficit	-631,605	-662,487	-1,113,402
UBTI	388,890	431,143	485,874
Deficit	1,020,495	1,093,630	1,599,276
Total income tax	99,119	116,933	132,378

perhaps organizations that previously had reported a single total of gross UBI between \$1,000 and \$10,000 (requiring only a "partial" return to be filed) found for 1992 that their calculated gross UBI was either below the \$1,000 filing threshold (requiring no return to be filed) or above \$10,000 (requiring a more detailed return to be filed) [5].

Larger organizations, those with gross UBI greater than \$10,000, filed 18,722 returns for 1992, a 5-percent increase over the number filed for 1991. As a whole, these organizations accounted for the growth in total gross UBI, total deductions, taxable income, and total income tax (Tables 2 and 3). The 1992 tax form revision did not greatly affect these organizations because they had always been required to calculate detailed gross income and expense items from unrelated business activities on schedules that were part of the tax return. They were still required to complete these schedules for 1992, but then had to transfer the schedule totals to the new income statement section of the tax form that applied to all organizations.

Primary Unrelated Business Activities

The discussion of unrelated business activities that follows takes into consideration only the primary (first) activity code of three possible codes reported on the Form 990-T. If an organization was engaged in more than one unrelated business activity, it was instructed to list the code of the largest activity in terms of gross UBI first, and then the codes for the next two largest activities. Because it is not possible to distribute gross UBI according to each type of activity when more than one activity was reported (filers were not required to do this), the amount of gross UBI assigned to primary unrelated business activities discussed in this section is overstated.

Three of the 10 principal industrial groupings--services; finance, insurance, and real estate; and retail trade--accounted for 91 to 92 percent of all Forms 990-T and the total gross UBI, total deductions, taxable income, and total

income tax reported on those forms (Table 5). The predominance of these three industry groupings varied for small versus large organizations in terms of gross UBI, but they encompassed the primary unrelated business activities of both types of organizations (Figure B). About 84 percent of returns showing some type of service as a primary unrelated business activity could be classified under the sub-groupings of business services, amusement and recreation services, and health services [6]. More organizations reported the business service of advertising (including printing) as their primary business activity than any other single activity chosen from a list of 160 possibilities [7]. These organizations, most of which were charitable organizations, business leagues, chambers of commerce, and real estate boards, accounted for 18 percent of returns filed, 18 percent of gross UBI, and 8 percent of total

Some form of finance, insurance, or real estate enterprise was given as the organization's primary unrelated business activity on nearly 40 percent of the Forms 990-T filed for 1992. Twenty-eight percent of total gross UBI and 63 percent of total income tax reported by all filers were attributable to this group of returns. Organizations whose primary business activities were included in the industrial sub-groupings of real estate; insurance; investment activities of Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations; and unrelated "debt-financed" activities accounted for 91 percent of gross UBI reported for the finance, insurance, and real estate grouping. (See the Appendix to this article for a description of the various types of tax-exempt organizations, which are listed by Internal Revenue Code section.)

Eleven percent of exempt organizations reported primary unrelated business activities in the retail trade industrial grouping. They accounted for 10 percent of gross UBI and 4 percent of total income tax. The majority of returns allocated to this grouping, about 69 percent, indicated that these organizations operated eating and drinking facilities as their primary business activity. Another 28 percent reported "miscellaneous" retail activities, which included the operation of pharmacies, book stores, and gift shops.

Unrelated Business Income

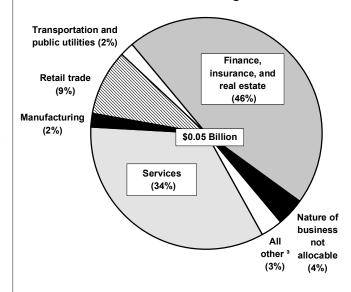

Ninety-nine percent of gross UBI was reported by the 18,722 larger organizations (those with gross UBI of more than \$10,000). The larger organizations also collectively accounted for between 97 and 98 percent of the total deductions, taxable income, and total income tax reported by all organizations.

The number of tax-exempt organizations reporting gross UBI of \$1 million or more grew by 45 percent between 1991

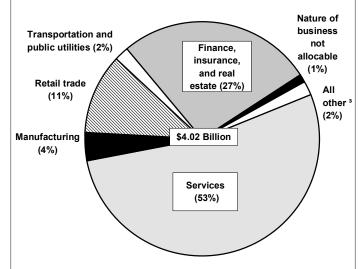

Figure B

Gross Unrelated Business Income (UBI), by Size of Organization and Industrial Grouping, Tax Year 1992

Gross UBI of Small Organizations ¹

Gross UBI of Large Organizations ²

- ¹ Small organizations are those with gross UBI of \$10,000 or less.
- ² Large organizations are those with gross UBI over \$10,000.
- ³ Includes "exploited exempt activities."

and 1992, and their aggregate gross UBI increased by 31 percent, to \$2.2 billion. The 627 organizations in this group were only 2 percent of all Form 990-T filers, but they accounted for 54 percent of total gross UBI and 64 percent of total income tax reported for 1992 (Table 2).

Gross profit (less loss) from sales and services and advertising income were the largest sources of gross UBI reported by all organizations, large and small, alike (Table 6). Combined, these two items accounted for 64 percent of the income of large organizations and 44 percent of the income of small organizations. Between 1991 and 1992, advertising income of large organizations rose by slightly more than 50 percent, mainly the result of a 146-percent increase in the advertising income of large nonprofit "charitable" organizations exempt from tax under section 501(c)(3)[8].

"Other" income (less loss), which includes types of income not specifically required to be reported elsewhere on the return (such as insurance benefits fees; member support fees; commissions; refunds of tax payments; recoveries of bad debts; and returned contributions, if they were previously reported as deductions), was the third largest source of gross UBI reported by large organizations, accounting for 14 percent of the total. Following gross profit (less loss) from sales and services and advertising income, investment, rental, and partnership income individually played an important role in the gross UBI of small organizations, with each source contributing 10 to 15 percent of the total. "Other" income (less loss) accounted for another 8 percent of small organizations' gross UBI.

Section 501(c)(3) charities accounted for over one-half of total gross UBI for 1992 (Table 1). They also produced about half of all large organizations' gross UBI. The charities and section 501(c)(7) social and recreational clubs each accounted for a quarter of total gross UBI reported by small organizations. Together, five types of organizations reported nearly 90 percent of total gross income from unrelated business activities: charitable organizations exempt under section 501(c)(3); civic leagues and social welfare organizations exempt under section 501(c)(4); business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6); social and recreational clubs exempt under section 501(c)(7); and voluntary employees' beneficiary associations exempt under section 501(c)(9) (Figure C) [9].

Deductions

Organizations with gross UBI of \$10,000 or less were not required either for 1992 or previous years to report the detailed expense and deduction items that larger organizations reported. Prior to 1992, smaller organizations were

required to report only two deduction items, total deductions and the \$1,000 "specific deduction" allowed all organizations. For 1992, these organizations had to report a total for expenses directly allocable to certain gross UBI components and a total for any other deductions, excluding the "specific deduction" and any "net operating loss" carryover, which had to be reported separately.

The largest portion of the \$5.2 billion of total deductions, 56 percent, was attributable to section 501(c)(3) organizations, followed in descending order by organizations tax exempt under sections 501(c)(6), 501(c)(4),

Gross profit (less loss) from sales and services and advertising income were the two largest sources of exempt organizations' gross unrelated business income.

501(c)(7),501(c)(5), and 501(c)(9). These latter organizations collectively accounted for another 37 percent of the total. "Setasides," a fairly large proportion of total deductions taken by section 501(c)(9) organizations with gross UBI over

\$10,000, nearly doubled between 1991 and 1992, from \$55.1 million to \$109.1 million. (Set-asides are defined in the Explanation of Selected Terms section.)

Total deductions and some of its components are somewhat understated because of the way cost of sales and services was reported on Form 990-T. Filers had to deduct the cost of sales and services from their gross receipts from sales and services in order to compute gross profit (less loss) from sales and services, which was the amount reported as a gross UBI component in the income statement. As a consequence, cost of sales and services was not included in the deductions section of the return. Also, because cost of sales and services can include some of the same types of expenses that are reported as separate deductions elsewhere on the return, some of the separate components also are understated. The amount of cost of sales and services deducted from gross receipts in computing gross profit (less loss) from sales and services was \$1.4 billion, which means that prior to deducting these costs, the amount of gross receipts from sales and services (minus returns and allowances) was \$3.1 billion for 1992.

The four largest types of deductions taken by organizations with gross UBI over \$10,000 were the "net operating loss" carryover, "other" deductions (such as professional services fees, insurance costs not related to employee benefits, equipment costs, rent paid, travel expenses, educational expenses, utilities, and general office costs), salaries and wages (excluding executive compensation), and direct advertising costs (Table 7). Together, these deductions made up three-fourths of the \$5.1 billion of

total deductions reported by large organizations. Executive compensation was a very small component of these total deductions, less than 1 percent.

Unrelated Business Income Tax

After deductions, exempt organizations reported a negative \$1.1 billion of unrelated business taxable income less deficit for 1992. However, of the 31,122 organizations filing Forms 990-T, 14,690 reported positive taxable income of \$485.9 million and 14,443 reported total income tax of \$132.4 million, an increase of 13 percent over the tax liability reported for 1991 (Table 4). The proportion of all filers reporting taxable income and total income tax was up 3 percent and 4 percent, respectively. A deficit was reported by 12,352 organizations and amounted to \$1.6 billion, a 46-percent increase over 1991 (Table 3).

Some organizations made adjustments to the unrelated business income tax for additional taxes and certain credits. While the largest share of total income tax was the tax on unrelated business income, total tax also could have included "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax" (AMT), and the environmental tax. Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the

U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit) were subtracted from the unrelated business income tax in computing total tax.

Approximately \$1.2 million of total credits against unrelated business income tax was reported by 228 organizations. The total amount included \$0.5 million of general business credits, \$0.4 million of foreign tax credits, \$0.1 million of credits for prior-year minimum tax, and \$0.1 million of other credits. The AMT, an addition to "tax after credits" was reported on 28 Forms 990-T and amounted to \$0.6 million. Eleven organizations reported the additional environmental tax, amounting to \$0.1 million. No returns showed a "recapture tax."

There were 11,482 exempt corporations and 2,961 exempt trusts that reported total income tax, out of a respective total of 27,397 and 3,725 Form 990-T filers. Exempt corporations were liable for \$76.4 million, or 58 percent, of total income tax and exempt trusts were liable for \$56.0 million. The unrelated business taxable income of exempt corporations and trusts was taxed at the regular corporate or trust tax rates that were in effect for the 1992 Tax Year. The corporate tax rate schedule remained unchanged between 1991 and 1992. For trusts, the ceiling on income tax brackets was revised upward for 1992, resulting in lower marginal tax rates for some organizations. Overall, however, exempt

trusts reported a 23-percent increase in taxable income and exempt corporations reported a 7-percent increase, resulting, for the most part, in the respective 21-percent and 8-percent increases in total income tax liability.

Sixty-eight percent of the total unrelated business income tax was reported by non-profit charitable organizations and voluntary employee beneficiary associations.

Thirty-five percent of total income tax liability was attribut-

able to section 501(c)(3) charitable organizations; 33 percent to section 501(c)(9) voluntary employees' beneficiary associations; 12 percent to 501(c)(6) business leagues, chambers of commerce, and real estate boards; 8 percent to section 501(c)(7) social and recreational clubs; and 5 percent to section 401(a) trusts that acted as fiduciary agents for profit-sharing plans. Although section 501(c)(9) associations were liable for nearly one-third of the total income tax reported by all organizations, they accounted for only 3 percent of all returns filed and 7 percent of gross UBI.

The high percentage of tax reported by section 501(c)(9) associations can be attributed, in part, to a limitation on amounts deducted from income as "set-asides" for employee welfare benefit plans. If plans were overfunded, meaning that investment income was set aside that exceeded qualified asset account limits, then a deduction for the set-aside amount in excess of the limitation was not allowed; the excess amount was taxed as unrelated business income, instead. Another factor affecting the relatively high amount of tax reported by these associations is that their investment portfolios are usually overseen by only one or two trust managers, so deductions for salaries and wages, a significant deduction for many other types of organizations, are relatively small, resulting in higher taxable income.

Summary

Tax-exempt organizations filed 5 percent fewer Forms 990-T, Exempt Organization Business Income Tax Return, for 1992, most likely the result of a revised tax form that introduced more extensive reporting requirements aimed at improving the accuracy of information provided. Organizations with gross unrelated business income (UBI) of \$10,000 or less were largely responsible for this drop, with 16 percent fewer returns filed. Larger organizations, those with gross UBI over \$10,000, filed 5 percent more returns for 1992 over 1991 and accounted for the increases in gross UBI, total deductions, taxable income, and total income tax between the two years.

Three major industrial groups--services; finance, insur-

ance, and real estate; and retail trade--accounted for 90 percent or more of all returns filed, total gross UBI, total deductions, taxable income, and total tax. Organizations reporting various types of services as primary business activities were responsible for 53 percent of gross UBI and 25 percent of total income tax. Finance, insurance, and real estate activities of tax-exempt organizations accounted for 28 percent of gross UBI and 63 percent of total tax.

Section 501(c)(3) charitable organizations accounted for 51 percent of gross UBI and 56 percent of total deductions reported on all Forms 990-T. As a group, four other types of organizations reported an additional 38 percent of gross UBI and 32 percent of total deductions: civic leagues and social welfare organizations, exempt under section 501(c)(4); business leagues, chambers of commerce, and real estate boards, exempt under section 501(c)(6); social and recreational clubs, exempt under section 501(c)(7); and voluntary employees' beneficiary associations, exempt under section 501(c)(9). The two largest sources of gross UBI were gross profit (less loss) from sales and services and advertising income, accounting for 43 percent and 21 percent, respectively, of the total.

For organizations with gross UBI over \$10,000, the largest components of total deductions were the net operating loss carryover, salaries and wages, direct advertising costs, and "other" deductions (not specifically reported elsewhere). These four types of deductions accounted for 75 percent of the total reported by all large organizations. Small organizations were not required for either 1992 or previous years to report all deduction items separately, as were the large organizations; therefore, comparisons with other years cannot be made. Small organizations reported less than 2 percent of the \$5.2 billion of aggregate total deductions taken by all organizations. After deductions, exempt organizations reported \$7.1 billion of unrelated business taxable income less deficit. About 53 percent of these organizations had no taxable income or they reported a deficit, amounting to \$1.6 billion. The remaining organizations reported taxable income of \$0.5 billion.

Total unrelated business income tax liability for 1992 was \$132.4 million, an increase of 13 percent over 1991. Seventy-nine percent of the organizations reporting the tax were exempt corporations and 21 percent were exempt trusts. Section 501(c)(3) charitable organizations; section 501(c)(6) business leagues, chambers of commerce, and real estate boards; section 501(c)(7) social and recreational clubs; section 501(c)(9) voluntary employees' beneficiary organizations; and section 401(a) trusts that were fiduciary agents for profit-sharing plans accounted for 92 percent of the total income tax reported on all Forms 990-T filed for 1992.

Data Sources and Limitations

The statistics in this article are based on a sample of Tax Year 1992 Forms 990-T, *Exempt Organization Business Income Tax Return*. The Internal Revenue Service required organizations having accounting periods **beginning** in 1992 (and, therefore, generally ending between December 1992 and November 1993) to file a 1992 Form 990-T. Because the accounting periods of the organizations filing a 1992 Form 990-T vary, the unrelated business financial activities covered in this article span the period January 1992 through November 1993 (although the majority of activities occurred during Calendar Year 1992).

The population from which the 1992 sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1993 and 1994. The returns in the sample were stratified based on the absolute value of gross unrelated business income (UBI). The sample of 5,181 returns was selected from a population of 41,496. After excluding returns that were selected for the sample but later rejected, the sample size was 5,017 and the estimated population was 31,122. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1992. (For example, a final return filed for January -June 1993 would have an ending accounting period that fit into the December 1992 to November 1993 ending range for a Tax Year 1992 return, but did not fit the criteria of having an accounting period beginning in 1992.)

Sampling rates ranged from 4.5 percent (returns with an absolute value of gross UBI less than \$20,000) to 100 percent (returns with an absolute value of gross UBI of \$300,000 or more). When it was determined that gross UBI was less than the \$1,000 filing threshold, the return was excluded from the study.

Only the primary unrelated business activity code was used for the statistics to present the types of unrelated business activities for exempt organizations. In addition to the primary activity code, up to two other codes could have been reported if the organization engaged in more than one unrelated activity. However, because income was not reported separately by activity code if the organization entered more than one code, it was not possible to distribute gross UBI by type of activity when more than one business activity was reported. Therefore, when more than one code was provided, the statistics show all of gross UBI, as well as other financial information, assigned to the primary code given.

The data presented were obtained from returns as originally filed with the IRS. They were subjected to

comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment, were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure D shows CV's for selected financial data. CV's are not shown for classes of gross UBI in ranges above "\$100,000 under \$500,000" because returns with gross UBI of \$300,000 or more were sampled at the 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix in this issue.

Explanation of Selected Terms

Advertising Income.—Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt

Figure D

N/A - Not applicable.

Activity Income.) Section 501(c)(7),(9),(17), and (20) organizations (each described in the Appendix to this article) reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt under sections 501(c)(7),(9),(17), and (20)) were not taxed on the net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7),(9),(17), and (20) organizations.)

Deductions Directly Connected With Unrelated Business Income. -- These were deductions allowed in computing "unrelated business taxable income," if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to the carrying on of an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-financed income; those directly connected with investment income of Code section 501(c)(7), (9), (17), and (20) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; and deductions for compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss" carryover; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, both defined below), except for two items that were required to be reported separately: the "net operating loss" deduction and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported by all organizations; the other types of deductions not directly connected with UBI were reported separately only by exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.--Two types of "excess" expenses were allowed as a deduction from unrelated business income: (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.--In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of

exploited exempt activity income (see the explanation of Advertising Income). Section 501(c)(7), (9), (17), and (20) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.--This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, a section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI). -- This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Code section 501(c)(7),(9),(17), and (20) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings of each component.)

Income from Controlled Organizations.--When an exempt organization controls another organization, the gross interest, annuities, royalties, and rents from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is exempt or nonexempt. The rules for debt-financed property did not apply to passive income from controlled organizations. (See the explanation of Unrelated Debt-financed Income.)

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly

connected with the unrelated income.

Investment Income (Less Loss).--This item was reported only by organizations exempt under sections 501(c)(7), (9), (17), and (20) (each described in the Appendix to this article) and included income such as gross unrelated debtfinanced income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), (17), and (20) organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), (17), and (20) did not report "investment income (less loss)." Generally, these organizations' dividend, interest, rental and annuity income was not taxed as unrelated business income, unless it was income from a controlled organization or debt-financed income, or if the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-financed Income.)

Net Capital Loss (Trusts Only).--If an exempt trust had a net capital loss, it was subject to a \$3,000 limitation. This item was reported on Form 990-T as a negative component of gross unrelated business income.

Net Gain (Less Loss), Sales of Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties which were capital assets.

Net Operating Loss Carryover.--The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit. The statistics in this article represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for financial management, accounting, legal, or consulting services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).--This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Rental Income.--For organizations tax exempt under sections other than 501(c)(7), (9), (17), and (20), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in computing "unrelated business taxable income." In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax exempt under sections 501(c)(7), (9), (17), and (20), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.--These amounts were allowed to social clubs (Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), supplemental unemployment benefit trusts (section 501(c)(17)), and group legal service organizations (section 501(c)(20)) as a deduction from investment income when passive income (generally, investment income) was set aside for one of the following described purposes: (1) the passive income of section 501(c)(7), (9), (17), and (20) organizations generally was not taxed if it was set aside to be used for charitable

purposes; (2) in the case of section 501(c)(9), (17), and (20) organizations, passive income was generally not taxed if it was set aside to provide for the payment of life, sick, accident, or other benefits. However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations which had positive taxable income after all other types of deductions were taken. If positive taxable income was less then \$1,000, then an organization could take a specific deduction equal to its taxable income.

Total Income Tax.--Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the environmental tax.

Unrelated Business Income. -- This was income of a taxexempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on "unrelated business taxable income (UBTI)." It was determined based on the regular corporate or trust income tax rates that were in effect for the 1992 Tax Year, as specified in the 1992 Instructions for Form 990-T, Exempt Organization Business Income Tax Return booklet.

Unrelated Business Taxable Income (UBTI).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deduc-

tions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. UBTI included only positive amounts of net income and was the "taxable income" amount that was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Unrelated Business Taxable Income (UBTI) Less Deficit.--This was derived as described in the explanation of Unrelated Business Taxable Income (UBTI). UBTI less deficit included both positive amounts (net income) and negative amounts (deficit).

Unrelated Debt-financed Income.--Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debt-financed property and the gain treated as unrelated debt-financed income. Income from debt-financed property did not include rents from personal property (e.g., computers or furniture leased with real property), certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income.

Notes and References

- [1] Discussions using the term "unrelated business taxable income (UBTI)" in this article refer only to positive amounts of net income (gross income minus total expenses and deductions). This is "taxable income." Data shown as "unrelated business taxable income (UBTI) less deficit" include both positive and negative amounts reported. UBTI less deficit is analogous to the term "net income (less deficit)" used in all other *Statistics of Income* business programs.
- [2] Based on a total of 1,083,028 exempt organizations reported in the *Internal Revenue Service Data Book*,

- Fiscal Years 1993-94. The total excludes Internal Revenue Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations, none of which reports tax on the Form 990-T. Also, the total is understated because it excludes churches, exempt under Code section 501(c)(3), which are not required to apply for recognition of tax exemption unless they desire to obtain an Internal Revenue Service (IRS) ruling. However, these churches are required to file Form 990-T if they have unrelated business income. Because of the understatement of the total number of exempt organizations, the proportion of all exempt organizations that filed a Form 990-T is lower than 3 percent.
- [3] Organizations which are determined by the Internal Revenue Service to be tax-exempt under the Internal Revenue Code must file a Federal income tax return (Form 990-T) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax exemption.
- [4] The most significant change made to the 1992 Form 990-T was an extensively revised income statement section of the main part of the tax return for reporting unrelated business income. It contained three columns: (A) gross unrelated business income (UBI); (B) expenses directly related to the type of gross income reported in column (A); and (C) the resulting net UBI. All Form 990-T filers were required to fill out the gross UBI column. Large organizations (those with gross UBI more than \$10,000) also had to fill out columns (B) and (C), while smaller organizations had to report only totals for these two columns. Previously, small organizations had to report only a single total for gross UBI and large organizations reported only net UBI amounts on the income statement. For 1992, as was the case for prior years, large organizations were required to fill out return schedules to compute gross UBI and related expenses for specified income items. New for 1992, small organizations were instructed to follow the format given in applicable schedules to compute the gross UBI amounts reported in column (A) of the income statement; however, as in previous years, they were not required to complete the schedules.
- [5] Returns filed by organizations with gross unrelated business income (UBI) below the filing requirement threshold (less than \$1,000) were excluded from the statistics presented in this article. Some of these

- returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer didn't realize that the payee was a tax-exempt organization.
- [6] Most of the data in this section on industry subgroups are from unpublished *Statistics of Income* tabulations.
- [7] The total of 160 industry classifications were combined to form the 10 major groupings shown in Table 5. See Office of Management and Budget, *Standard Industrial Classification Manual*, 1972 and 1987, which lists all of the 4-digit industry codes used by businesses, except for the five additional categories that reflect certain provisions of the Internal Revenue Code pertaining to exempt organizations. These additional categories include exploited exempt activities and the first four activities classified under finance, insurance and real estate in Table 5.
- [8] The term "charitable" refers to tax-exempt activities which are charitable, educational, scientific, social,

- literary or religious in nature.
- [9] For the most recent annual data on Internal Revenue Code section 501(c)(3) through (9) tax-exempt organizations (excluding private foundations and most religious organizations), see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1991," Statistics of Income Bulletin, Summer 1995, Volume 15, Number 1. For the most recent annual data on private foundations, see Arnsberger, Paul and Eastep, Susan, "Private Foundations and Charitable Trusts, 1992," Statistics of Income Bulletin, Winter 1995-1996, Volume 15. Number 3. Previous articles and papers on tax-exempt organizations and charitable giving for the years 1974-1992 have been published in Internal Revenue Service, Statistics of Income, Compendium of Studies of Tax-Exempt Organizations, 1974-1987, and Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2. See, also, Skelly, Daniel F., "Tax-Based Research and Data on Nonprofit Organizations, 1975-1990," Statistics of Income Bulletin, Summer 1994, Volume 14, Number 1.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit sharing, or stock bonus plans	Fiduciary agent for pension, profit sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, sickness, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State chartered credit unions and mutual reserve funds	Providing loans to members

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(20)	Prepaid legal service funds	Providing legal services exclusively to employees
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit sharing, or stock bonus plans; or governmental units
501(e)	Cooperative hospital service organizations	Performing cooperative services for exempt hospitals
501(f)	Cooperative service organizations of operating educational organizations	Performing collective investment services for exempt educational organizations

¹ Beginning with tax years after June 30, 1992, section 501(c)(20) organizations were no longer tax-exempt.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations, cost of sales and services was \$1.4 billion.

² "Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with unrelated business taxable income (UBTI) less deficit equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

NOTE: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

Table 2.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Unrelated Business Taxable Income (UBTI) Less Deficit, and Total Income Tax, by Size of Gross UBI

[All data are estimates based on samples--money amounts are in thousands of dollars]

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations, cost of sales and services was \$1.4 billion.

NOTE: Detail may not add to totals because of rounding.

² "Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with unrelated business taxable income (UBTI) less deficit equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

⁵ The bracketed gross unrelated business income (UBI) amounts of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required).

NOTE: Detail may not add to totals because of rounding.

² "Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with unrelated business taxable income (UBTI) less deficit equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the environmental tax.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ All organizations were required to report each income item, as shown in columns 7 through 30. However, only organizations with gross UBI over \$10,000 were required to report each expense item and deduction, as shown in columns 10 through 59 of Table 7. Sources of gross UBI are shown separately for these larger organizations in columns 31 through 54 of this table in order to facilitate comparison with Table 7.

² Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

³ Income from real property and personal property leased with real property.

⁴ Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

⁵ Annuities, interest, rents, and royalties.

NOTE: Detail may not add to totals because of rounding.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations, cost of sales and services was \$1.4 billion.

² "Total deductions" includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 10 through 59.

⁴ Excludes \$40.0 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1

⁵ Excludes \$1.3 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1.

⁶ This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), (17), and (20) organizations only.

NOTE: Detail may not add to totals because of rounding.

by Margaret Riley

ax-exempt organizations with accounting periods beginning in 1993 reported \$4.7 billion of gross "unrelated business income" that was derived from regularly carrying on activities that were not substantially related to their tax-exempt function. After offsetting gross unrelated business income (UBI) with \$5.7 billion of total deductions, these organizations reported an aggregate net deficit of \$1.0 billion. Of the 32,638 organizations that reported gross UBI on Tax Year 1993 Forms 990-T, Exempt Organization Business Income Tax Return, fewer than half, or 46 percent, reported unrelated business net income (taxable profit) amounting to \$603.6 million; the others reported zero net income or net deficits [1]. After adjustments were made to the \$180.0 million of tax due on unrelated business income, subtracting certain credits and adding other taxes, the resulting total income tax reported was \$181.4 million [2].

As shown in Figure A, the number of Forms 990-T filed by organizations reporting gross UBI rose by 5 percent between 1992 and 1993, a recovery from the 5-percent decrease in return filings which occurred between 1991 and 1992 (discussed below). Gross UBI increased by 15 percent, while related deductions increased by 11 percent between 1992 and 1993, resulting in a 6-percent decrease in the amount of aggregate net loss reported. However, total net income collectively reported by a little more than 15,000 organizations for 1993 was 24 percent higher than the amount reported for 1992, an increase that partly contributed to the 37-percent rise in total income tax. The cause, or causes, of the increased net income requires further research, since it reflects increases in gross UBI, as well as smaller increases in deductions, and both of these are the result of organizational decisions. The 37-percent increase in total income tax is discussed in the Increases in Corporate and Trust Tax Rates section, presented below.

For each of the Tax Years 1990 through 1993, the percentage of organizations that reported net income on Forms 990-T remained fairly stable, ranging from 44 to 47 percent. The remaining organizations reported zero net income or a deficit. For all four years, the percentage of organizations reporting net income gradually decreased as the size class of gross UBI increased. For example, for Tax Year 1993, net income was reported on 55 percent of the returns filed by organizations with gross UBI of \$10,000 or less, on 41 percent of the returns filed by organizations with gross UBI over \$10,000 but under \$1,000,000, and on

Total income tax	132,378	181,437	+37.1	

33 percent of the returns filed by organizations with gross UBI of \$1,000,000 or more.

Figure B graphically displays "per return" averages, in constant 1992 dollars, for four major financial items reported on Form 990-T: gross UBI, total deductions, net income, and total income tax [3]. From Tax Year 1991 to Tax Year 1993, average amounts of gross UBI and total deductions increased, in real dollar terms, by 33 and 35 percent, respectively. The relatively large percentage increases in these two items over the three tax years can be attributed almost entirely to growth which occurred during Tax Year 1992. Respective increases in average gross UBI and average total deductions from 1991 to 1992 were 32 percent and 38 percent. Average real gross UBI rose by only 1 percent from 1992 to 1993, while average real total deductions for this period fell by about 2 percent.

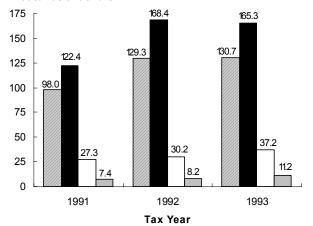

An extensive revision of the Tax Year 1992 Form 990-T introduced a change in reporting requirements which contributed to a 16-percent decline in the number of returns filed by smaller exempt organizations, those with gross UBI of \$10,000 or less [4]. Overall, the number of returns filed for 1992 dropped by 5 percent, but, at the same time, gross UBI and total deductions grew by 20 percent and 28 percent, respectively. This accounts for much of the large percentage increases between 1991 and 1992 in the averages shown in Figure B for these two items. Despite the significant variation in the percentage change in average total deductions between the 1991-92 and the 1992-93 periods, the amount of average total deductions consistently was between 125 and 130 percent of respective average gross income for each of the three tax years shown.

Constant-dollar per return net income, based on returns showing a taxable profit, grew by 36 percent between 1991

Figure B

Average¹ Total Gross Unrelated Business Income, Average Total Deductions, Average Net Income² (Taxable Profit), and Average Total Income Tax, 1991-1993, in Constant 1992 Dollars

Thousands of dollars

¹ The average for a given item was computed based on the number of returns on which that item was actually reported, not the total number of returns filed.

NOTE: Constant dollar amounts were calculated using the Gross Domestic Product (GDP) implicit price deflator, published in U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business* (selected issues).

and 1993, with interim 11-percent and 23-percent increases in the 1991-92 and 1992-93 tax-year periods, respectively. Constant-dollar per return total income tax rose by 51 percent between 1991 and 1993, with interim increases of 11 percent and 37 percent for the respective 1991-92 and 1992-93 periods. Real growth in each of the four major financial items presented in Figure B will continue to be tracked in future studies.

Tax-Exempt Organizations and the Revenue Reconciliation Act of 1993

Lobbying and Political Expenditures

Under the Revenue Reconciliation Act of 1993 (Act), lobbying expenses paid or incurred after December 31, 1993, were no longer deductible as ordinary and necessary business expenses [5]. Generally, expenses subject to this limitation included amounts paid or incurred in connection with influencing Federal or state legislation, participating or intervening in any political campaign, or directly

communicating with certain executive branch officials in an attempt to influence their official actions or positions. A *de minimis* rule exempted certain in-house expenditures, up to \$2,000, from the deduction limitation.

The Act also established a new reporting requirement for all tax-exempt organizations engaging in lobbying or political activities, other than charitable organizations described in Internal Revenue Code section 501(c)(3) [6]. (See the Appendix to this article for a description of the various types of tax-exempt organizations, which are listed by Code section.) Affected organizations were required to report on their Forms 990, Return of Organization Exempt From Income Tax, the total amount of nondeductible lobbying expenditures for the tax year, plus the total amount of assessed or paid membership dues that were allocable to the expenditures. Any organization to which the reporting rule applied also had to provide a notice to members regarding their share of dues to which nondeductible lobbying expenditures were allocable. If the organization elected not to notify its members or failed to include the entire amount of dues that were allocable to the lobbying expenditures (which might easily occur since an estimate of lobbying expenditures expected to be made in the following year was provided in the notification, rather than actual expenditures for a prior period), then the "proxy" tax was imposed. The proxy tax was required to be reported on the Form 990-T; however, there was no connection between the proxy tax and an organization's unrelated business activities or the tax on unrelated business income.

The proxy tax was effective for tax years ending after December 31, 1993, and was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to an organization's members, multiplied by the highest corporate tax rate (35) percent for Tax Year 1993). No expenses or other offsets were allowed against the taxable amount. Transition rules were provided for organizations whose fiscal periods spanned Calendar Years 1993 and 1994. If an organization received or assessed applicable dues prior to January 1, 1994, without the required notification, it was allowed to either pay the proxy tax on the actual amount of dues allocable to Calendar Year 1994 nondeductible expenditures, or to adjust its estimate of allocable dues for the following tax year to correct for the failure to notify members.

Because the proxy tax provisions of the Act were not effective until January 1, 1994, organizations filing Tax Year 1993 returns with January through December accounting periods--54 percent of all filers--were not subject to the tax for that year. All other organizations were covered by the

² Excludes returns with net deficit.

transition rules described above, and it is possible that some of these organizations opted to adjust estimates of allocable dues for 1994 rather than pay the proxy tax for 1993. The proxy tax statistics presented in this article are from returns filed by organi-

The amount of total income tax reported by tax-exempt organizations for 1993 represented a 37-percent increase over 1992.

zations that reported gross UBI above \$1,000 (the filing threshold). Forms 990-T filed only to report the proxy tax (the organization had no unrelated business income or gross UBI was less than \$1,000) were excluded from the study sample. Therefore, the data presented below do not provide a complete picture of the impact of the proxy tax provisions on exempt organizations.

For Tax Year 1993, there were 83 organizations, all of which had gross UBI of \$1,000 or more and were various types of associations tax-exempt under Code section 501(c)(6), that reported the proxy tax. These 83 associations reported \$2.6 million of total income tax, of which \$2.2 million, or 85 percent, was the proxy tax. The remaining \$0.4 million was the regular corporate tax on their combined \$1.3 million of unrelated business net income. Their aggregate gross UBI was \$19.4 million.

Increases in Corporate and Trust Tax Rates

The Act also increased both corporate and trust income tax rates for Tax Year 1993. The unrelated business income of tax-exempt organizations was taxed at these rates. The maximum tax rate increased from 34 percent to 35 percent for corporations, and from 31 percent to 39.6 percent for trusts [7]. In addition, the number of graduated tax rate brackets increased from four to eight for corporations and from three to five for trusts. The amount of total income tax reported by tax-exempt organizations for 1993 represented a 37-percent increase over 1992. Comparatively, increases in total income tax reported for Tax Years 1991 and 1992 were 18 percent and 13 percent, respectively. The increase in total income tax for 1993 can be attributed in part to the new Act provisions limiting deductions for lobbying expenses, imposing the proxy tax, and raising income tax rates. Another contributing factor was the 24-percent increase in net income, the amount on which the unrelated business income tax was based.

Tax-exempt trusts bore slightly more of the Form 990-T total tax burden than corporate tax-exempt entities for 1993. While the trusts numbered only 13 percent of all organizations, they accounted for 51 percent of aggregate total income tax. For 1992, they accounted for only 42

percent of the total tax. Their \$92.7 million of reported total income tax represented a 65-percent increase over the reported 1992 amount; tax-exempt corporate income tax liability increased 17 percent between the two years. The new tax structure affected exempt trusts to a much larger degree than exempt corporations. Whereas the 1993 revisions to the tax rates affected only those corporate organizations with unrelated business taxable income greater than \$10,000,000, all trusts with taxable income above \$1,500 were taxed for 1993 at rates that were higher than the 1992 rates. Out of the 3,231 trusts reporting unrelated business income tax liability for 1993, slightly more than half were taxed at rates that exceeded the 1992 rates formerly applied to the same levels of taxable income. Fewer than one-tenth of 1 percent of the 11,611 exempt corporations reporting tax on unrelated business income for 1993 were affected by the change in tax rates.

Exempt and Nonexempt Finances

Forms 990 and 990-T Integrated Sample Match

A special "integrated sample" matching program was instituted for the 1993 Statistics of Income study samples of Forms 990 and 990-T in order to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations which filed both forms. Under the matching program, the Form 990-T sample included unrelated business income tax returns filed by any organizations whose information returns were selected for either of two samples of Form 990 returns, one that included charities tax-exempt under section 501(c)(3), and a separate sample that included organizations tax-exempt under sections 501(c)(4) through 501(c)(9)[8, 9].

In total, there were 4,417 records in the Form 990-T sample that matched the Employer Identification Number and Internal Revenue Code section of records in the two Form 990 samples. Applying Form 990 sample weights to the matched records produced an estimated population of 20,498 organizations for analysis [10]. To clarify, this population is estimated from matched Form 990 and Form 990-T records in the SOI samples; it is not the estimated total population of section 501(c)(3) through 501(c)(9) organizations filing Forms 990-T. The estimated total number of Forms 990-T filed for Tax Year 1993 by organizations in each of these Code section groupings is shown in Table 1 at the end of this article [11]. The matched records provide the means for consistency in analyzing exemptfunction and nonexempt-function income and expenses of organizations that are involved in unrelated business activities.

An initial analysis of income and expense data from the

integrated samples has been illustrated in Figures C and D. All of the financial data shown are aggregate amounts for various groups of tax-exempt organizations. More indepth analyses of various distributions of organizations by size, levels, and forms of revenue and expenditures may be explored in future articles. The top panel of both figures displays income and expense data for each section 501(c)(3) through (9) category; the lower panel shows a separate distribution of the data for the various types of section 501(c)(3) charities. The types listed are based on self-coding from check-box selections contained on the Form 990, Schedule A, which consists of supplemental information required of section 501(c)(3) organizations.

In Figure C, "total income" and "total expenses" are the amounts reported on Form 990 [12]. These totals include both exempt-function and nonexempt-function (unrelated business) income and expenses. The "unrelated business income" and "unrelated business expenses" amounts are those that were reported on the Form 990-T [13]. These totals are taken directly from the returns as required to be

reported for tax administration purposes. Therefore, the expenses-to-income ratios shown in Figure C are based on a tax concept of income and expenses. While the income and expense data reported on Internal Revenue Service (IRS) forms may be useful for analysis from a tax administration perspective, they do not provide a truly accurate representation of a business "receipts and expenditures" concept of actual financial activity [14].

In Figure D, adjusted tax form amounts have been used to provide a more consistent form of measurement for comparing unrelated business financial activity to the overall financial activity of the organizations studied [15]. Based on adjusted income and expense amounts, Figure D shows the respective proportions of total income and total expenses reported on Form 990 that were allocated to unrelated business income and expenses reported on Form 990-T.

Expenses-to-Income Ratios

The expenses-to-income ratios in Figure C indicate that

aggregate expenses reported on the Form 990-T exceeded income for each class of organization shown, except section 501(c)(9) organizations. The allowance of a deduction for the "net operating loss" carryover (see Explanation of Terms section), the largest type of deduction reported by many Form 990-T filers, substantially contributed to the excess of unrelated business expenses. This is an example of a deduction allowed for tax purposes that was excluded from "adjusted" expenses shown in Figure D. There was no net operating loss carryover allowed on the Form 990, which is considered an "information" return, not a "tax" return.

The unrelated business expenses-to-income ratio shown in Figure C for section 501(c)(9) voluntary employees' beneficiary associations is quite low compared to other types of organizations listed because most of their unrelated business income is from investments and their portfolios are usually overseen by only one or two trust managers. Therefore, deductions for salaries and wages, a

significant deduction for many other types of organizations, are relatively small. Occupancy expenses, such as rents and utilities, allocated to unrelated business activities also are usually lower for these associations compared to most other types of organizations.

The ratio shown for recreational and social clubs, tax-exempt under section 501(c)(7), also is comparatively low because their unrelated business deductions were limited under IRS Revenue Ruling 81-69 (RR81-69). If one of these organizations consistently incurred losses from sales to nonmembers (e.g., sales from a food and beverage concession), then it could not deduct these losses from its unrelated business income. Out of the 5,236 section 501(c)(7) organizations shown in Figure C, 789 reported \$97.2 million of deductions that were excluded from the computation of taxable income because of the RR81-69 limitation. This amount, which was 39 percent of the affected organizations' aggregate total expenses (before reduction), is somewhat understated because not all organizations

disclosed on their Forms 990-T the amount by which they adjusted total deductions under the limitation.

Allocation of Exempt Organization Income and Expenses to Unrelated Business Activities

As mentioned previously, income and expenses shown in Figure D have been adjusted to facilitate comparison of exempt organizations' overall financial activities with their unrelated business activities. Adjustments were made to more accurately reflect actual business receipts and expenditures, versus the amounts of income and deductions that were reported as required for tax purposes [16]. The top panel of Figure D shows that business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6) collectively had the highest proportions of total income and total expenses allocated to unrelated business activities, a little more than 9 percent of each item. Much of the unrelated business income and expenses reported by these organizations on Form 990-T is related to paid advertisements that are contained in journals and other periodicals that they publish. Relatively high proportions are also shown for civic leagues and social welfare organizations exempt under section 501(c)(4); labor, agricultural, and horticultural organizations exempt under section 501(c)(5); and recreational and social clubs exempt under section 501(c)(7).

A very small portion of the income of fraternal beneficiary organizations exempt under section 501(c)(8) was derived from unrelated business enterprises. These organizations' adjusted unrelated business income and expenses each were less than 1 percent of their total income and expenses. Also, section 501(c)(8) organizations accounted for only 1 percent of the total adjusted unrelated business income and expenses reported by the 20,498 organizations shown in Figure D. In addition to section 501(c)(8) organizations, some of the types of section 501(c)(3) organizations shown in the lower panel of Figure D also had comparatively small proportions of total income and expenses that were attributed to unrelated business activities.

Overall, charities exempt under section 501(c)(3) had adjusted unrelated business income that was only about 1 percent of their adjusted total income, but they accounted for 56 percent of the \$4.4 billion total of adjusted unrelated business income shown in the top panel of Figure D. The distribution of these charities by type shows that organizations supporting a public college, organizations supporting other charitable organizations, and publicly-supported organizations all had higher percentages of total income generated from unrelated business activities than any of the other types of charities listed [17]. However, in dollar

Overall, charities had adjusted unrelated business income (AUBI) that was only 1 percent of their adjusted total income, but they accounted for 56 percent of the \$4.4 billion total of AUBI.

terms, the hospitals and publicly-supported organizations engaged in unrelated business activities to a greater extent than other types of section 501(c)(3) organizations. In addition, they each reported unrelated business income that

was higher than the total reported by any of the section 501(c)(4) through (9) groups presented in Figure D.

Expenses-to-income ratios like those in Figure C are not shown for the adjusted income and expense data in Figure D. However, when recalculated using the Figure D adjusted income and expense amounts, expenses-to-income ratios for unrelated business activities were effectively lowered for all IRC section classes of organizations shown. Organizations exempt under sections 501(c)(3), (4), (5), (6), and (8) all had adjusted unrelated business expenses-to-income (UBE-to-UBI) ratios that were equal, or nearly equal, to 1.00, ranging from 0.96 to 1.01. Adjusted UBE-to-UBI ratios for the section 501(c)(7) and 501(c)(9) organizations were 0.85 and 0.19, respectively.

Summary

For 1993, tax-exempt organizations reported \$4.7 billion of gross unrelated business income from activities that were not substantially related to their exempt missions. After offsetting income with \$5.7 billion of total deductions, these organizations reported a net deficit of \$1.0 billion. Despite the aggregate deficit, positive net income of \$603.6 million was reported by 15,067 organizations, and that resulted in aggregate unrelated business income tax (UBIT) of \$180.0 million. After making adjustments to UBIT, by subtracting certain allowable credits and adding other required taxes, total income tax liability was \$181.4 million, an increase of 37 percent over 1992.

The Revenue Reconciliation Act of 1993 affected taxexempt organizations by limiting the amount of deductible lobbying expenses, raising both corporate and trust income tax rates applied to unrelated business income, and imposing a new "proxy tax" on certain lobbying expenditures. Organizations had to pay the proxy tax on any portion of assessed or paid membership dues that were used for lobbying activities if they failed to notify each member of the amount of its dues used for the lobbying activities.

An "integrated sample" matching program was instituted by the IRS Statistics of Income program for Tax Year 1993 and was designed to link an organization's unrelated business financial data reported on Form 990-T, *Exempt Organization Business Income Tax Return*, with its total

financial data reported on Form 990, Return of Organization Exempt From Income Tax. Information from matched Forms 990 and 990-T were gathered for organizations tax-exempt under Internal Revenue Code sections 501(c)(3), nonprofit charitable organizations; 501(c)(4), civic leagues and social welfare organizations; 501(c)(5), labor, agricultural, and horticultural organizations; 501(c)(6), business leagues and associations, chambers of commerce, and real estate boards; 501(c)(7), social and recreational clubs; 501(c)(8), fraternal beneficiary societies and associations; and 501(c)(9), voluntary employees' beneficiary organizations. The matched sample facilitates tax policy and economic analysis of exempt-function and non-exempt function income and expenses of tax-exempt organizations.

Data Sources and Limitations

The statistics in this article are based on samples of Tax Year 1993 Forms 990-T, Exempt Organization Business Income Tax Return, and Forms 990, Return of Organization Exempt From Income Tax. The Internal Revenue Service required organizations having accounting periods beginning in 1993 (and, therefore, ending between December 1993 and November 1994) to file 1993 Forms 990 and 990-T. Because the accounting periods of the organizations filing a 1993 return vary, the financial activities covered in this article span the period January 1993 through November 1994 (although the majority of activities occurred during Calendar Year 1993). The tables at the end of this article were produced from the Form 990-T sample and include most types of tax-exempt organizations. The data analyzed in the Forms 990 and 990-T Integrated Sample Match section (and presented in Figures C and D) were from matched Internal Revenue Code section 501(c)(3) through 501(c)(9) records only. As explained earlier, this matching procedure ensured that the Form 990-T sample included unrelated business income tax returns filed by any tax-exempt organizations whose information returns were selected for either of two Form 990 samples (one of section 501(c)(3) organizations and the other of section 501(c)(4) through 501(c)(9) organizations). For an explanation of the Form 990 samples, please see the data release, Charities and Other Tax-Exempt Organizations, 1993, in this issue. The Form 990-T sample is described below.

The population from which the 1993 Form 990-T sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1994 and 1995. The returns in the sample were stratified based on the value of gross unrelated business income (UBI). The sample of 6,451 returns was selected from a population of 33,676. After excluding returns that were selected for the

sample but later rejected, the sample size was 6,281 and the estimated population size was 32,638. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1993. (For example, a final return filed for the short period of January - June 1994 may have been computer-selected for the 1993 sample based on the criteria of having an ending accounting period that fit into the December 1993 to November 1994 range for a Tax Year 1993 return, but it would be rejected because in actuality it was a Tax Year 1994 return.)

Sampling rates ranged from a minimum of 1.4 percent (Form 990-T gross UBI was less than \$20,000 and either there was no Form 990 match or the Form 990 match was a section code 501(c)(3) return with assets under \$1,000,000) to a maximum of 100 percent (either Form 990-T gross UBI was \$300,000 or more, or it had any amount of gross UBI and matched a Form 990 with assets of \$10,000,000 or more) [18]. Other Form 990/Form 990-T matches with various ranges of gross UBI, assets, and section codes were selected at rates ranging from 1.9 percent to 40 percent. When it was determined that gross UBI was less than the \$1,000 filing threshold, the return was excluded from the study.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure E shows CV's for selected financial data. CV's are not shown for returns with gross UBI of \$300,000 or more because they were sampled at the 100-percent rate and,

N/A - Not applicable.

therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix, located near the back of this issue.

The data presented in this article were obtained from returns as originally filed with the IRS. They were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment, were not incorporated into the data base.

Explanation of Selected Terms

Advertising Income.--Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Internal Revenue Code section 501(c)(7), (9), and (17) organizations (each described in the Appendix to this article) reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17)) were not taxed on the net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), and (17) organizations.)

Deductions Directly Connected With Unrelated Business Income.--These were deductions allowed in computing net income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to the carrying on of an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-

financed income; those directly connected with investment income of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; and deductions for compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss" carryover; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly-connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, both defined below), except for two items that were required to be reported separately: the "net operating loss carryover" and the "specific deduction," also defined

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported, when applicable, by all organizations with positive taxable income; the other types of deductions not directly connected with UBI were reported separately, when applicable, only by exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.--Two types of "excess" expenses were allowed as deductions from unrelated business income: (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not

exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.--In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Internal Revenue Code section 501(c)(7),(9), and (17) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.-- This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, an Internal Revenue Code section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI).--This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by

allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings of each component.)

Income from Controlled Organizations.--When an exempt organization controls another organization, the gross interest, annuities, royalties, and rents from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is tax-exempt or not. "Control" means: (a) for a stock corporation, the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and ownership of at least 80 percent of the total number of shares of all other classes of stock of the corporation; or (b) for a nonstock organization, at least 80 percent of the directors or trustees of the organization are either representatives of, or directly or indirectly controlled by, a tax-exempt organization. The rules for debt-financed property did not apply to passive income from controlled organizations. (See the explanation of Unrelated Debtfinanced Income.)

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).-- This item was reported only by organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17) (each described in the Appendix to this article) and included income such as gross unrelated debt-financed income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), and (17)

organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), and (17) did not report "investment income (less loss)." Generally, these organizations' dividend, interest, rental and annuity income was not taxed as unrelated business income, unless it was income from a controlled organization or debt-financed income, or if the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-financed Income.)

Net Capital Loss (Trusts Only).--If an exempt (or nonexempt) trust had a net loss from sales or exchanges of capital assets, it was allowed a deduction for the amount of the net loss or \$3,000, whichever was lower. Corporations were not allowed to deduct any excesses of capital losses over capital gains. Trusts reported the net capital loss deduction on Form 990-T as a negative component of gross unrelated business income. Most of the trusts filing Forms 990-T were Individual Retirement Arrangements (IRA's); employee pension, profit sharing or stock bonus plans; and employees' beneficiary associations providing for payment of life, sickness, accident, or other benefits to members.

Net Gain (Less Loss), Sales of Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties which were capital assets

Net Income (Less Deficit).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. On a return-by-return basis, the result of this computation was either positive (net income), negative (deficit), or zero. Net income represented taxable profit, which was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Net Operating Loss Carryover.--The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had

been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit from its unrelated trade or business income. The statistics in this article represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for accounting, legal, consulting, or financial management services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).--This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Proxy Tax.--This was a tax on certain nondeductible lobbying and political expenditures paid or incurred after December 31, 1993, by tax-exempt organizations, except Internal Revenue Code section 501(c)(3) charitable organizations. If the organization failed to notify its members regarding their share of dues to which nondeductible lobbying and political expenditures were allocable, or if the notice did not include the entire amount of dues that were allocable, then the proxy tax was imposed on the organization. It was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to the organization's members, multiplied by the highest corporate tax rate.

Rental Income.--For organizations tax exempt under Internal Revenue Code sections other than 501(c)(7), (9), and (17), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in

computing unrelated business taxable income. In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax-exempt under sections 501(c)(7), (9), and (17), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.--These amounts were allowed to social clubs (Internal Revenue Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), and supplemental unemployment benefit trusts (section 501(c)(17)) as a deduction from investment income. The deduction was equal to the amount of passive income (generally, investment income) that these organizations set aside (1) to be used for charitable purposes or (2) to provide payment of life, sick, accident, or other benefits (section 501(c)(9) and (17) organizations only). However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations which had positive taxable income after all other types of deductions were taken. If positive taxable income was less then \$1,000, then an organization could take a specific deduction equal to its taxable income.

Total Income Tax.--Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures, the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the "environmental tax."

Unrelated Business Income.--This was income of a taxexempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on unrelated business net income (taxable profit). It was determined based on the regular corporate or trust income tax rates that were in effect for the 1993 Tax Year, as specified in the 1993 Instructions for Form 990-T, Exempt Organization Business Income Tax Return booklet.

Unrelated Debt-financed Income.--Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debt-financed property and the gain was treated as unrelated debt-financed income. Income from debt-financed property did not include rents from personal property (e.g., computers or furniture) leased with real property, certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported all debt-financed income (whether or not it was subject to the UBI tax) as "Investment Income (Less Loss)." All other organizations reported debt-financed income separately.

Notes and References

[1] Organizations that are determined by the Internal Revenue Service to be tax-exempt under section 501(a) of the Internal Revenue Code must file a

- Federal income tax return (Form 990-T) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax-exempt status. Internal Revenue Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations file tax forms other than Form 990-T. Returns filed by organizations with gross unrelated business income (UBI) below the filing requirement threshold (less than \$1,000) were excluded from the statistics presented in this article. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer didn't realize that the payee was a tax-exempt organization.
- [2] While the largest share of total income tax was the tax on unrelated business income, total tax also could have included the "proxy tax" on certain lobbying expenditures, "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax" (AMT), and the environmental tax. Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit) were subtracted from the unrelated business income tax in computing total tax.
- [3] Inflation-adjusted "constant" or "real" dollar estimates shown in Figure B were derived using the Implicit Price Deflator for Gross Domestic Product from the U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, January/February 1996, Volume 76, Number 1/2 (for the year 1991), and August 1996, Volume 76, Number 8, (for the years 1992 and 1993).
- [4] See Riley, Margaret, "Exempt Organization Business Income Tax Returns, 1992," *Statistics of Income Bulletin*, Spring 1996, Volume 15, Number 4, for a discussion of the effect of the Tax Year 1992 reporting requirement changes.
- [5] For a more complete description of provisions affecting tax-exempt organizations, see Commerce Clearing House, *Revenue Reconciliation Act of 1993: Law and Explanation*, August 1993.

- [6] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary or religious in nature. Organizations tax exempt under Internal Revenue Code section 501(c)(3) may engage in only an insubstantial amount of lobbying activity and they are not allowed to engage in any political activities.
- [7] Tax rates for exempt trusts were the same as those imposed on taxable trusts for Tax Year 1993. The maximum rate of 39.6 percent was created by the addition of a 10-percent surtax to the new 36-percent tax bracket. The 39.6-percent rate was imposed on trusts with taxable income in excess of \$7,500. The maximum corporate tax rate of 35 percent applied to both exempt and nonexempt corporations with taxable income in excess of \$10,000,000. An additional 3-percent tax was levied on corporate taxable income over \$15,000,000, up to a maximum of \$100,000 in additional tax.
- [8] Included in the samples were Forms 990-EZ, Short Form Return of Organization Exempt From Income Tax, which were allowed to be filed by smaller organizations (those with annual gross receipts of less than \$100,000 and total assets of less than \$250,000 at end of year). A small number of these returns matched Forms 990-T in the "integrated sample," but they were excluded from the analysis because they did not contain all of the detailed financial data items reported on Form 990 that were used to compile data in Figures C and D. Some items that were required to be reported separately on Form 990 were allowed to be lumped together in an "other" category on the Form 990-EZ, such as "other income."
- [9] For the most recent annual data on organizations tax-exempt under Internal Revenue Code sections 501(c)(3) (excluding private foundations and most religious organizations) through 501(c)(9), see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1993," *Statistics of Income Bulletin*, in this issue. For the most recent annual data on private foundations, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1993," *Statistics of Income Bulletin*, Winter 1996-1997, Volume 16, Number 3. Previous articles and papers on charities and other tax-exempt organizations for the years 1974-1992 have been published in Internal Revenue Service, *Statistics of Income, Compendium of Studies of Tax-Exempt Organizations*, 1974-1987, and

- Compendium of Studies of Tax-Exempt Organizations, 1986-1992, Volume 2.
- [10] For detailed information on Statistics of Income sampling methodology for producing population estimates, see the general appendix, located near the back of this issue, particularly the Sample Criteria and Selection of Returns section and the Method of Estimation section. See, also, the Data Sources and Limitations section of this article.
- [11] Some reasons why the estimates of matched Form 990-T filings shown in Figures C and D are lower than the estimates of overall Form 990-T filings shown in Table 1 are (1) Forms 990-T and matching "short" Forms 990-EZ that were part of the integrated samples were excluded from the matched-return analysis (see footnote 8); (2) some organizations filed a Form 990-T, but did not file a Form 990 because their gross receipts were below the \$25,000 Form 990 filing threshold; (3) churches, which are tax-exempt under Internal Revenue Code section 501(c)(3), are not required to file Form 990 or Form 990-EZ, but are required to file Form 990-T if they had unrelated business income; and (4) private foundations, which are tax-exempt under section 501(c)(3), file Form 990-PF, Return of Private Foundation, not Form 990; therefore, a Form 990-T filed by a private foundation would not have a matching record in the Form 990
- [12] "Total income" is from Part I, line 12 on Form 990; "total expenses" is from Part I, line 17 on Form 990.
- [13] "Unrelated business income" is from Part I, line 13, column A on Form 990-T; "unrelated business expenses" is from the sum of Part I, line 13, column B and Part II, line 29 on Form 990-T.
- [14] In order to shift from the tax concept to the receipts and expenditures concept of income and expenses, adjustments were made to develop revised income and expense totals from both tax forms that represented, to the extent possible, the organizations' actual financial involvement in conducting current fiscal-year (1993) operations, and that were more analogous for comparing total financial activity with unrelated business financial activity. This was accomplished by (1) excluding certain items that were reported for tax purposes and were not current-year

income or expenses, or were not directly associated with the operation of a business or program, and (2) adding back to income totals (either on Form 990 or Form 990-T, as applicable) certain expense items that were allowed to be subtracted from gross income prior to calculating total income; these expense items also were added to expense totals (because the expense totals on the tax forms did not include them).

Examples of eliminated items are charitable contributions paid (reported on Forms 990 and 990-T) or received (reported on Form 990); amounts paid as "special assistance to individuals," reported on Form 990; the "specific deduction" of up to \$1,000 allowed to Form 990-T filers that had positive taxable income; the "net operating loss" carryover allowed to Form 990-T filers; and "set-asides," amounts that were actually exempt-function income, but were reported on From 990-T as a deduction from gross investment income. (The specific deduction, net operating loss carryover, and set-asides are defined in the Explanation of Selected Terms section of this article.) Examples of increases that were made to both income and expense totals to adjust for expense items that, on the tax forms, were subtracted from gross income prior to computing total income are rental expenses that were subtracted from gross rents on Form 990; direct expenses that were subtracted from gross revenue from special events and activities on Form 990; and cost of sales and services that was subtracted from gross receipts from sales and services on Forms 990 and 990-T.

[15] Below are the formulas used for computing adjusted total income, adjusted total expenses, adjusted unrelated business income, and adjusted unrelated business expenses shown in Figure D. A special thanks to Bob Gardiner, an Internal Revenue Service Exempt Organization Specialist in the office of Employee Plans and Exempt Organizations, for providing advice in developing these formulas and for generously sharing his technical expertise with Statistics of Income staff on many other occasions.

Form 990 Adjusted Total Income =

Total revenue (Part I, line 12)

- + Rental expenses¹ (Part I, line 6b)
- + Direct expenses from special events, other than fundraising¹ (Part I, line 9b)
- +Cost of sales and services² (Part I, line 10b)

- Contributions, gifts and grants received (Part I, line 1d)

Form 990 Adjusted Total Expenses =

Total Expenses (Part I, line 17)

- +Rental expenses¹ (Part I, line 6b)
- +Direct expenses from special events, other than fundraising¹ (Part I, line 9b)
- +Cost of sales and services² (Part I, line 10b)
- Payments to affiliates (Part I, line 16)
- Grants and allocations (Part II, line 22B)
- Special assistance to individuals (Part II, line 23B)

Form 990-T Adjusted Unrelated Business Income=

Gross unrelated business income (Part I, line 13A)

- +Cost of sales and services² (Part I, line 2)
- Set-asides³ (Schedule G, column 4)

Form 990-T Adjusted Unrelated Business Expenses = Sum of total expenses (Part I, line 13B) and total deductions (Part II. line 29)

- +Cost of sales and services² (Part I, line 2)
- Set-asides³ (Schedule G, column 4)
- Charitable contributions paid (Part II, line 20)
- Net operating loss carryover (Part II, line 31)
- Specific deduction⁴ (Part II, line 33)

¹On Form 990, these expenses were deducted from gross income prior to calculating "total revenue."

²On Forms 990 and 990-T, this expense was deducted from gross income prior to calculating "total revenue" and "gross unrelated business income."

³On Form 990-T, this amount was allowed as a deduction from gross income by Internal Revenue Code section 501(c)(7) and 501(c)(9) organizations because it was set aside

for tax-exempt purposes. The set-aside amount was considered exempt-function income. For a definition of "set-asides," see the Explanation of Selected Terms section of this article.

⁴This was a deduction, up to \$1,000, allowed to all organizations reporting net income on Form 990-T.

- [16] To review the adjustments made to income and expenses, see footnotes 14 and 15.
- [17] The various types of nonprofit charitable organizations are discussed in Hilgert, Cecelia, op. cit. A "publicly-supported" organization must receive at least one-third of its total support from governmental units, from contributions made directly or indirectly by the general public, or from a combination of these sources. It is organized and operated in a manner to attract new and additional public or governmental support on a continuous basis. Certain types of publicly-supported organizations, as defined by Internal Revenue Code section 509(a)(2), have an additional limit on the amount of support they may receive from total gross investment income and unrelated business income.
- [18] For additional information on the Form 990 and Form 990-T integrated sample design, see Harte, James, M., and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Turning Administrative Systems Into Information Systems, 1993.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit sharing, or stock bonus plans	Fiduciary agent for pension, profit sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, sickness, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, sickness, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State chartered credit unions and mutual reserve funds	Providing loans to members

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit sharing, or stock bonus plans; or governmental units

Table 1.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Internal Revenue Code Section Describing Type of Tax-Exempt Organization

[All figures are estimates based on samples--money amounts are in thousands of dollars]

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.5 billion.

Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvment in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$2.2 million.

⁵ Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt beginning with tax years after June 30, 1992. NOTES: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

\$5,000,000 or more	38	824,139	38	586,091	38	238,048	38	81,449

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For exempt organizations reporting net income, cost of sales and services was \$561.0 million.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting positive net income, total proxy tax was \$0.6 million.

⁴ The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required).

NOTE: Detail may not add to totals because of rounding.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ For definitions of the sources of gross unrelated business income, see the Explanation of Terms section of this article.

² The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required).

³ All organizations were required to report each income item, as shown in columns 3 through 26. However, only organizations with gross UBI over \$10,000 were required to report each deduction shown in columns 14 through 45, 48, 49, and 54 through 59 of Table 7. A total of gross UBI is shown separately for these larger organizations in order to facilitate comparison with Table 7.

⁴ Property other than capital assets generally included property of a business nature, in contrast to personal and investment property which were capital assets.

⁵ Income from real property and personal property leased with real property.

⁶ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁷ Annuities, interest, rents, and royalties.

¹ Excludes cost of sales and services which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.5 billion.

NOTE: Detail may not add to totals because of rounding.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 10 through 59.

⁴ Excludes \$37.2 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1 for explanation.

Excludes \$1.5 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1 for explanation.

^o This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

by Margaret Riley

ax-exempt "nonprofit" organizations reported \$5.4 billion of gross "unrelated business income" (UBI) on Form 990-T, *Exempt Organization Business Income Tax Return*, for Tax Year 1994 [1]. After reducing gross UBI by \$6.5 billion of allowable deductions, the resulting overall net deficit was \$1.1 billion. However, 52 percent of these 35,657 organizations, which are normally exempt from income tax under the Internal Revenue Code, reported an aggregate net taxable profit of \$643.0 million from unrelated business activities. After adjustments for other taxes and certain credits were made to the \$191.5 million of reported unrelated business income tax, non-profit organizations incurred a total tax liability of \$195.2 million [2].

In general, income of a nonprofit organization is subject to the "unrelated business income tax" if it is produced from activities that are regularly carried on and are not substantially related to the organization's tax-exempt purpose. There are certain exclusions to this income taxation; some examples are engaging in business activities in which substantially all of the work is performed by volunteer labor; selling merchandise that the organization received as a gift or contribution; and operating certain bingo games, as specified in the Code.

Financial Highlights

As shown in Figure A, gross unrelated business income increased by 15 percent between 1993 and 1994. Total deductions increased by 13 percent and the amount of aggregate net loss increased by 8 percent. The number of organizations reporting taxable profit was 23 percent higher for 1994, but the total dollar amount of the profit rose by only 7 percent. (See Table 4 at the end of this data release for information on organizations reporting taxable profit.) Total income tax reported on Form 990-T was 8 percent higher for 1994, a much lower growth rate than the 37-percent increase between 1992 and 1993. The large increase for 1993 resulted mainly from new tax provisions limiting deductions for lobbying expenses, the imposition of the "proxy tax" on nondeductible lobbying expenditures, and increases in income tax rates, especially those applicable to nonprofit trusts filing Form 990-T [3]. For 1994, tax rates remained unchanged for nonprofit corporations and were lowered slightly for nonprofit trusts.

The largest portion of aggregate gross income reported

This article was written by Margaret Riley, a statistician with the Special Studies Special Projects Section, under the direction of Michael Alexander, Chief.

Total income tax	181,437	195,191	+7.6

NOTE: Detail may not add to totals because of rounding

on Form 990-T was \$2.7 billion of gross profit (less loss) from sales and services, which accounted for one-half of the total. (See Table 6 for the components of gross UBI, which are defined in the Explanation of Selected Terms section of this data release.) Most of the income derived from this component is from for-profit commercial activities carried on by the nonprofit organizations. Examples of some of the types of business activities that, if determined to be unrelated to the nonprofit organization's tax-exempt mission, would generate gross profit (less loss) from sales and services are data processing services, sales of insurance to nonmembers, sales of food and beverages to nonmembers, operation of day care centers, operation of golf courses for nonmembers, operation of fitness/recreation centers, operation of parking lots, medical laboratory services, land surveying/testing services, referral services, and various amusement and recreation services.

Gross profit from sales and services increased 27 percent between 1993 and 1994. It has been gaining in importance as a source of income for nonprofits over the past few years. For the 1990 to 1994 period, this component increased gradually from 41 percent to 51 percent of total unrelated business income reported by organizations with gross UBI above \$10,000. (Prior to 1992, organizations with gross UBI of \$10,000 or less were not required to report each income item separately; only a total of gross UBI was reported.) Three-quarters of the \$2.7 billion total of gross profit (less loss) from sales and services reported for 1994 by all nonprofit organizations can be credited to charitable organizations tax-exempt under Internal Revenue Code section 501(c)(3) [4]. (See the Appendix to this data

release for a description of the various types of tax-exempt organizations, which are listed by Code section.) Their \$2.0 billion of revenue from this component accounted for 65 percent of their gross UBI from all sources.

The second-largest component of gross UBI for 1994 was advertising income. This item comprised 18 percent, or nearly \$1 billion, of gross unrelated business income. Organizations tax-exempt under sections 501(c)(3) and 501(c)(6) (business leagues, chambers of commerce, and real estate boards) together accounted for 84 percent of all reported advertising income. Typically, this is a major source of unrelated business income for the 501(c)(6) organizations; for 1994, it was 56 percent of their gross UBI. By contrast, advertising income was only 13 percent of gross UBI reported by the 501(c)(3) charities.

The next section contains a special analysis of unrelated business income, based on a subsample of tax re-

turns from the Form 990-T SOI study and a counterpart subsample of information returns from the 1994 Form 990 (*Return of Organization Exempt From Income Tax*) SOI study, with both subsamples incorporating the same set of organizations [5]. While

Gross profit from sales and services increased 27 percent between 1993 and 1994.

the Form 990-T sample weights were used to produce the statistics presented elsewhere in this data release, the Form 990 sample weights were used in the special analysis because any tax return that was not initially selected for the Form 990-T sample, based on established income levels and sampling rates, ultimately was included if an information return filed by the same organization was present in the Form 990 sample. In effect, the Form 990 sample was the catalyst for developing the Form 990-T subsample, from which data were used to supplement the information reported by the same organization on its Form 990. The return matching process employed to develop the two subsamples is explained in more detail in the following section.

Measuring Nonprofit Involvement in Unrelated Business Activities from Matched Forms 990 and 990-T

The 1994 Statistics of Income (SOI) study samples of Form 990 and Form 990-T incorporated a special "integrated" sample matching program to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations that filed both forms.

Under the matching program, the Form 990-T sample included unrelated business income tax returns filed by any organizations whose Form 990 information returns were selected for either of two other SOI samples, one that included charities tax-exempt under section 501(c)(3), and a separate sample that included organizations tax-exempt under sections 501(c)(4) through 501(c)(9) [6, 7].

Returns selected for the two Form 990 samples were a determining factor in the selection of returns that were included in the integrated portion of the Form 990-T sample. The Form 990-T sample was designed so that if a return initially was not selected "in its own right" based on independent Form 990-T sampling criteria, it was subjected to further sampling based on a Forms 990/990-T matching process. Under this process, the Employer Identification Numbers (EIN's) of Form 990-T returns that initially were not selected for the sample were compared to the EIN's of returns selected for the two Form 990 SOI samples. When a match occurred, the matched Form 990-T was added to the independently selected Form 990-T sample. These specially matched returns, along with the independently selected Forms 990-T that also had counterparts in the Form 990 samples, formed the "integrated" portion of the Form 990-T sample. This integrated portion became the Form 990-T subsample used for the special analysis of nonprofit involvement in unrelated business activities.

Of the total 6,838 records in the Form 990-T sample, there were 4,472 that matched records in the two Form 990 samples, based on the EIN. Half of these Forms 990-T were not selected initially but became part of the sample because they subsequently matched a selected Form 990. Applying Form 990 sample weights to the matched records produced an estimated population of 20,875 organizations for analysis, as shown in Figure B [8]. To clarify, this population is estimated based on Form 990 and Form 990-T records in the SOI samples that had matching EIN's; it is not the estimated total population of section 501(c)(3) through 501(c)(9) organizations filing Forms 990-T. The estimated total number of Forms 990-T filed for Tax Year 1994 by organizations in each of these Code section groupings is shown in Table 1 at the end of this data release [9]. The matched records provide the means for consistency in analyzing exempt-function and nonexempt-function income of organizations that are involved in unrelated business activities.

The 20,875 organizations for which statistics are shown in Figure B represent Form 990 filers that reported unrelated business income on Form 990-T. These organizations accounted for 10 percent of the 209,086 population of Code section 501(c)(3) through 501(c)(9) organizations

Figure B

Forms 990 and 990-T Matched Returns: Percentage of Returns Filed, by Selected Internal Revenue Code Section and the Proportion of Total Gross Receipts (TGR) Attributable to Unrelated Business Gross Receipts (UBGR), Tax Year 1994

^{**}Data deleted to avoid disclosure of information for specific taxpayers.

NOTE: Percentages may not add to 100 because of rounding.

shown in Figure B represent Form 990 filers that reported unrelated business income on Form 990-T. These organizations accounted for 10 percent of the 209,086 population of Code section 501(c)(3) through 501(c)(9) organizations filing Form 990, based on the SOI Form 990 samples (excluding Form 990-EZ). Figure B illustrates, to a large degree, the extent to which the organizations selected for the matched Forms 990 and 990-T subsamples engaged in unrelated business activities. This is measured by the proportion of "total gross receipts" (TGR) that is derived from "unrelated business gross receipts" (UBGR). The amounts of total revenue from Form 990 and unrelated business income from Form 990-T were adjusted to make them more analogous for comparison and to include only those components that are considered to be current tax year (1994) gross receipts [10]. The formulas used to compute total gross receipts and unrelated business gross receipts are shown in Figure C.

Overall, 19 percent of the matched Form 990 and Form 990-T filers reported gross receipts from unrelated business activities that were less than 1 percent of their total gross receipts; 65 percent of the organizations reported less than 10 percent of their TGR attributable to UBGR; and about 11 percent reported UBGR that was 50 percent or more of their TGR. However, observing the different groups of organizations categorized by Code section, the percentages of returns filed vary substantially within the

Figure C

Formulas Used to Compute Total Gross Receipts (TGR) and Unrelated Business Gross Receipts (UBGR) Shown in Figure B

Form 990 Total Gross Receipts =

Total revenue (Part I, line 12)

- + Rental expenses1 (Part I, line 6b)
- + Direct expenses from special events, other than fundraising¹ (Part I, line 9b)
- + Cost of sales and services2 (Part I, line 10b)
- Contributions, gifts, and grants received (Part I, line 1d)

Form 990-T Unrelated Business Gross Receipts =

Gross unrelated business income (Part I, line 13A)

- + Cost of sales and services2 (Part I, line 2)
- Set-asides³ (Schedule G, column 4)

¹ Total income and unrelated business income were adjusted to reflect gross receipts from current tax year (1994) operations only and to make their components more analogous for comparison. See Figure C for an explanation of "total gross receipts" and "unrelated business gross receipts."

² See the Appendix to this data release for a description of the types of organizations by Internal Revenue Code section

³ Includes 222 returns where the amount of adjusted unrelated business gross receipts reported on Form 990-T exceeded the amount of adjusted total gross receipts reported on Form 990. See text for a discussion of these returns.

¹ On Form 990, these expenses were deducted from gross income prior to calculating "total revenue."

² On Forms 990 and 990-T, this expense was deducted from gross income prior to calculating "total revenue" and "gross unrelated business income."

³ On Form 990-T, "set-asides" were first included in total gross unrelated business income and then subtracted from the total as an expense in computing net income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations were allowed to expense this amount because it was money set aside for tax-exempt purposes. Therefore, the set-aside amount was considered exempt-function income. For a definition of set-asides, see the Explanation of Selected Terms section of this data release.

tary employee beneficiary associations reported gross receipts from unrelated business activities that were less than 10 percent of their gross receipts from all sources, related and unrelated, for 1994. Sixty-one percent of the section 501(c)(6) business leagues, chambers of commerce, and real estate boards and 52 percent of the 501(c)(8) fraternal beneficiary societies and organizations also reported less than 10 percent of total receipts from UBGR.

About half of the section 501(c)(5) labor, agricultural, and horticultural organizations, and about one-third of the organizations exempt under sections 501(c)(6) and 501(c)(8) reported UBGR that was in the range of 10 percent under 50 percent of TGR. Between 7 percent and 27 percent of the returns filed by each of the remaining Code section groups of organizations fell into this range.

Slightly more than half of the 1,205 section 501(c)(4) social welfare organizations in the matched return study reported that 75 percent or more of their TGR was generated from unrelated business activities. All but six of these section 501(c)(4) organizations reported gross receipts from sales and services as the sole source of their UBGR. Virtually all of them reported their primary business activity as "amusement and recreation services" [11].

A limited review of the returns in the matched sample revealed that, in some cases, not all of the unrelated income reported on Form 990-T had been included in the total income reported on the associated Form 990, which should have included all related and unrelated income. There were an estimated 222 returns where the income reported on the Form 990-T actually was higher than that reported on the Form 990. Included in this group were 116 returns filed by section 501(c)(3) organizations, 78 filed by section 501(c)(4) organizations, 24 filed by section 501(c)(6) organizations, and 4 filed by section 501(c)(8) and 501(c)(9) organizations, combined. These latter two categories are combined to avoid the possibility of disclosure of information for specific taxpayers. There may be additional cases in which the Form 990 fails to contain the full amount of unrelated income reported on the Form 990-T, but they cannot be identified as easily as the ones discussed here [12].

The majority of these 222 returns were filed by smaller organizations, in terms of their income and asset size (94 percent had total gross receipts less than \$300,000 and 87 percent had total assets under \$600,000). In all but three cases, the organization paid a preparer to complete its Form 990-T. Statistics on whether or not a paid preparer completed the associated Form 990 are not available, but it may be assumed that the same preparer completed both returns and perhaps failed to realize that unrelated (taxable)

income should be included with related (tax-exempt) income on Form 990. It is important to note that the returns selected for SOI statistical studies are processed prior to audit procedures and taxpayer amendments; therefore, if any corrections were made to Forms 990 and 990-T as a result of these factors, they would not be represented in these statistics. It is possible that if undetected taxpayer reporting errors on either Form 990 or Form 990-T were identified and corrected, then the percentages shown in Figure B would be altered to some extent. If the matched returns where the unrelated income on Form 990-T was higher than total income on Form 990 are excluded from column (8) in Figure B, the resulting proportions for the section 501(c)(3), 501(c)(4), and 501(c)(6) organizations would be 6.1 percent, 48.1 percent, and 1.7 percent, respectively. Revised percentages for the section 501(c)(8) and

About half of the section 501(c)(4) social welfare organizations reported that 75 percent or more of their total gross receipts was generated from unrelated business

501(c)(9) organizations are not provided, once again for the reason of safeguarding taxpayer privacy.

Data Sources and Limitations

The statistics in this data release are based on samples of Tax Year 1994 Forms 990-T, Exempt Organization Business Income Tax Return, and Forms 990, Return of Organization Exempt

From Income Tax. The Internal Revenue Service required organizations having accounting periods beginning in 1994 (and, therefore, ending between December 1994 and November 1995) to file 1994 Forms 990 and 990-T. Because the accounting periods of the organizations filing a 1994 return vary, the financial activities covered in this data release span the period January 1994 through November 1995 (although the majority of activities occurred during Calendar Year 1994). The tables at the end of this data release were produced from the Form 990-T sample and include most types of tax-exempt organizations. The data analyzed in the section titled Measuring Nonprofit Involvement in Unrelated Business Activities from Matched Forms 990 and 990-T (and presented in Figure B) were from matched Internal Revenue Code section 501(c)(3) through 501(c)(9) records only. As explained earlier, this matching procedure ensured that the Form 990-T sample included unrelated business income tax returns filed by any tax-exempt organizations whose information

returns were selected for either of two Form 990 samples (one of section 501(c)(3) organizations and the other of section 501(c)(4) through 501(c)(9) organizations). For an explanation of the Form 990 samples, see the Data Sources and Limitations section of the article, "Charities and Other Tax-Exempt Organizations, 1994," in this issue of the *Statistics of Income Bulletin*. The Form 990-T sample is described below.

The population from which the 1994 Form 990-T sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1995 and 1996. The returns in the sample were stratified based on the size of gross unrelated business income (UBI). The sample of 6,838 returns was selected from a population of 36,046. After excluding returns that were selected for the sample but later rejected, the sample size was 6,791 and the estimated population size was 35,657. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1994. (For example, a final return filed for the short period of January to June 1995 may have been computerselected for the 1994 sample based on the criteria of having an ending accounting period that fit into the December 1994 to November 1995 range for a Tax Year 1994 return, but it would have been rejected because, in actuality, it was a Tax Year 1995 return.)

Sampling rates ranged from a minimum of 2.6 percent (Form 990-T gross UBI was less than \$20,000, and either there was no Form 990 match or the Form 990 match was a section code 501(c)(3) return with assets under \$2,500,000) to a maximum of 100 percent (either Form 990-T gross UBI was \$300,000 or more, or it had any amount of gross UBI and matched a Form 990 with assets of \$10,000,000 or more) [13]. Other Forms 990/990-T matches within various ranges of gross UBI, assets, and section codes were selected at rates ranging from 4 percent to 40 percent.

The information presented in this data release was obtained from returns as originally filed with the IRS. The data were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the database.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure D shows CV's for selected financial data.

CV's are not shown for returns with gross UBI of \$500,000 or more because they were sampled at the 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix, located near the back of this issue of the *Statistics of Income Bulletin*.

Explanation of Selected Terms

Advertising Income.—Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Internal Revenue Code section 501(c)(7), (9), and (17) organizations (each described in the Appendix to this data release) reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt

¹ The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

N/A - Not applicable

under Internal Revenue Code sections 501(c)(7), (9), and (17)) were not taxed on the net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), and (17) organizations.)

Deductions Directly Connected With Unrelated Business Income. -- These were deductions allowed in computing net income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to the carrying on of an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debtfinanced income; those directly connected with investment income of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss" carryover; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly-connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, each defined below), except for two items that were required to be reported separately: the "net operating loss carryover" and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.--The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported, when applicable, by all organizations with positive taxable income; the other types of deductions not directly connected with UBI were reported separately, when applicable, only by exempt organizations

with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.--The two types of "excess" expenses allowed as deductions from unrelated business income were (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising .--In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Internal Revenue Code section 501(c)(7), (9), and (17)organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.--This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, an Internal Revenue Code section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI).--This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings for each component.)

Income from Controlled Organizations.--When an exempt organization controls another organization, the gross annuities, interest, rents, and royalties from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is taxexempt or not. "Control" means: (a) for a stock corporation, the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and ownership of at least 80 percent of the total number of shares of all other classes of stock of the corporation; or (b) for a nonstock organization, at least 80 percent of the directors or trustees of the organization are either representatives of, or directly or indirectly controlled by, a taxexempt organization. The rules for debt-financed property did not apply to passive income from controlled

organizations. (See the explanation of Unrelated Debtfinanced Income.)

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).-- This item was reported only by organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17) (each described in the Appendix to this data release) and included income such as gross unrelated debt-financed income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), and (17)organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), and (17) did not report "investment income (less loss)." Generally, these organizations' investment income (dividends, interest, rents, and annuities) and royalty income were not taxed as unrelated business income, unless it was income from a controlled organization (excluding dividends) or debt-financed income, or the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-financed Income.)

Net Capital Loss (Trusts Only).--If a trust had a net loss from sales or exchanges of capital assets, it was allowed a deduction for the amount of the net loss or \$3,000, whichever was lower. (Corporations were not allowed to deduct any excesses of capital losses over capital gains.) Trusts reported the net capital loss deduction on Form 990-T as a negative component of gross unrelated business income. Most of the trusts filing Forms 990-T were Individual Retirement Arrangements (IRA's); employee pension, profit-sharing, or stock bonus plans; and employees' beneficiary associations providing for payment of life, health, accident, or other benefits to members.

Net Gain (Less Loss), Sales of Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties, which were capital assets.

Net Income (Less Deficit).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. On a return-by-return basis, the result of this computation was either positive (net income), negative (deficit), or zero. Net income represented taxable profit, which was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Net Operating Loss Carryover .-- The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit from its unrelated trade or business activities. The statistics in this data release represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for accounting, legal, consulting, or financial management services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).--This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Proxy Tax.--This was a tax on certain nondeductible lobbying and political expenditures paid or incurred after December 31, 1993, by organizations that were tax-exempt under Internal Revenue Code sections 501(c)(4), 501(c)(5),

and 501(c)(6). If the organization failed to notify its members regarding their shares of dues to which nondeductible lobbying and political expenditures were allocable, or if the notice did not include the entire amount of dues that were allocable, then the proxy tax was imposed on the organization. It was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to the organization's members, multiplied by 35 percent. The proxy tax was required to be reported on Form 990-T and was included in total income tax; however, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities. Forms 990-T filed solely to report the proxy tax (no unrelated business income (UBI) reported) were excluded from the SOI sample. Organizations whose returns were included in the SOI sample reported an aggregate \$4.5 million of proxy tax. Based on an unpublished tabulation of data from the IRS Returns Transaction File, a total of \$11.3 million of proxy tax was reported on Forms 990-T filed for Tax Year 1994.

Rental Income.--For organizations tax exempt under Internal Revenue Code sections other than 501(c)(7), (9), and (17), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property, if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in computing unrelated business taxable income. In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax-exempt under sections 501(c)(7), (9), and (17), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.--These amounts were allowed to social clubs (Internal Revenue Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), and supplemental unemployment benefit trusts (section 501(c)(17)) as a deduction from investment income. The

deduction was equal to the amount of passive income (generally, investment income) that these organizations set aside (1) to be used for charitable purposes or (2) to provide payment of life, health, accident, or other insurance benefits (section 501(c)(9) and (17) organizations only). However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations that had positive taxable income after all other types of deductions were taken. If positive taxable income was less then \$1,000, then an organization could take a specific deduction equal to its taxable income.

Total Income Tax.--Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures, the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the "environmental tax."

Unrelated Business Income. -- This was income of a taxexempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on unrelated business net income (taxable profit). It was determined based on the regular corporate or trust income tax rates that were in effect for the 1994 Tax Year, as shown in the following schedules.

Tax Rates for Corporations

(Section 11 of the Internal Revenue Code)

Amount of unrelated business taxable income is:

			Of the
	But not		amount
Over	over	Tax is:	over
\$ 0	\$50,000	15%	\$0
50,000	75,000	\$7,500+25%	50,000
75,000	100,000	13,750+34%	75,000
100,000	335,000	22,250+39%	100,000
335,000	10,000,000	113,900+34%	335,000
10,000,000	15,000,000	3,400,000+35%	10,000,000
15,000,000	18,333,333	5,150,000+38%	15,000,000
18,333,333		35%	0

Tax Rates for Trusts

(Section 1(e) of the Internal Revenue Code)

Amount of unrelated business taxable income is:

			Of the
	But not		amount
Over	over	Tax is:	over
\$0	\$1,500	15%	\$0
1,500	3,600	\$225+28%	1,500
3,600	5,500	813+31%	3,600
5,500	7,500	1,402+36%	5,500
7,500		2,122+39.6%	7,500

Unrelated Debt-financed Income.--Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was

considered debt-financed property, and the gain was treated as unrelated debt-financed income. Income from debt-financed property did not include rents from personal property (e.g., computers or furniture) leased with real property, certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported all debt-financed income as "Investment Income (Less Loss)." All other organizations reported debt-financed income separately.

Notes and References

- Organizations that are recognized as tax exempt under section 501(a) of the Internal Revenue Code, and described in Code sections 401(a), 408(e), and 501(c), must file a Federal income tax return (Form 990-T) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax-exempt status. Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations file tax forms other than Form 990-T. Returns filed by organizations with gross unrelated business income (UBI) below the \$1,000 filing requirement threshold were excluded from the statistics presented in this data release. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer did not realize that the payee was a tax-exempt organiza-
- [2] While the largest share of total income tax was the tax on unrelated business income, total tax also could have included the "proxy tax" on certain lobbying expenditures, "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax" (AMT), and the environmental tax. Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit) were subtracted from unrelated business income tax in computing total tax. Total applied credits for 1994 were \$1.9 million and total additional taxes were \$5.6 million. The amount of additional taxes is under-

- stated because Forms 990-T filed solely to report the proxy tax (no unrelated business income was reported) were excluded from the SOI sample and, therefore, are not represented in these statistics. Based on returns in the SOI sample, the amount of the proxy tax included in total income tax was \$4.5 million. Based on an unpublished tabulation of data from the IRS Returns Transaction File, the total amount of proxy tax reported on all Forms 990-T filed for Tax Year 1994 was \$11.3 million. The proxy tax was required to be reported on the Form 990-T and was included in total income tax; however, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities. The proxy tax is defined in the Explanation of Selected Terms section of this data release.
- [3] See Riley, Margaret, "Exempt Organization Business Income Tax Returns, 1993: Highlights and an Analysis of Exempt and Nonexempt Finances," *Statistics of Income Bulletin*, Spring 1997, Volume 16, Number 4, for a discussion of the effect of the Revenue Reconciliation Act of 1993 on nonprofit organizations.
- [4] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary, or religious in nature.
- [5] Public disclosure of data from the Form 990 "information" return is allowed under Internal Revenue Code section 6104(b), with the exception of information on contributors. Public disclosure of specific taxpayer data from Form 990-T is not allowed because it is a "tax" return and, as such, is covered by the confidentiality and disclosure provisions of Code section 6103.
- [6] In addition to Forms 990, the samples included Forms 990-EZ, Short Form Return of Organization Exempt From Income Tax, which were allowed to be filed by smaller organizations (those with annual gross receipts of less than \$100,000 and total assets of less than \$250,000 at end of year). A small number of these returns matched Forms 990-T in the integrated sample, but they were excluded from the analysis because they did not contain all of the detailed financial data items reported on Form 990 that are needed for comparison with Form 990-T financial data. Some items that were required to be reported separately on Form 990 were allowed to be lumped together in an

- "other" category on the Form 990-EZ, such as "other income."
- [7] For the most recent Form 990 annual data on organizations tax-exempt under Internal Revenue Code sections 501(c)(3) (excluding private foundations and most religious organizations) through 501(c)(9), see Hilgert, Cecelia, "Charities and Other Tax-Exempt Organizations, 1994," in this issue of the Statistics of Income Bulletin. Private foundations, tax exempt under Code section 501(c)(3), are required to file Form 990-PF (Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation), rather than Form 990. For the most recent annual data on private foundations, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1994," Statistics of Income Bulletin, Fall 1997, Volume 17, Number 2. Private foundations were required to report taxable income on Forms 990-T, but this type of organization was not included in the integrated sample design. "Nonexempt charitable trusts" (described in Code section 4947(a)(1)) that filed the Form 990-PF information return for 1994 were required to report taxable income on Form 1041, U.S. Fiduciary Income Tax Return, not Form 990-T.
- [8] The Form 990 sample weights, rather than the Form 990-T sample weights, were used to produce matched record population estimates presented in this section of the data release. The matched data represent Form 990-T information reported only by those organizations whose returns were selected for the Form 990 samples, which are not all inclusive of the types of organizations that may be required to file Form 990-T. Some tax-exempt organizations file Form 990-T but do not file Form 990. See footnote 9, items (2), (3), and (4), for a description of those organizations. Form 990-T sample weights were used to produce the estimates presented elsewhere in this data release. Because Figure B is based on Form 990 sample weights, and the statistics presented in all other sections of this data release are based on Form 990-T sample weights, Figure B should not be compared to the data shown in Figure A or Tables 1 through 7. For detailed information on Statistics of Income sampling methodology for producing population estimates, see the general appendix, located near the back of this issue of the Statistics of Income Bulletin, particularly the Sample Criteria and Selection of Returns section and the Method of Estimation

- section. See, also, the Data Sources and Limitations section of this data release.
- [9] Some reasons why the estimates of matched Form 990-T filings shown in Figure B (produced using Form 990 sample weights) are lower than the estimates of overall Form 990-T filings shown in Table 1 (produced using Form 990-T sample weights) are (1) Forms 990-T and matching "short" Forms 990-EZ that were part of the integrated samples were excluded from the matched-return analysis (see footnote 6); (2) some organizations filed a Form 990-T, but did not file a Form 990 because their gross receipts were below the \$25,000 Form 990 filing threshold; (3) churches, which are tax-exempt under Internal Revenue Code section 501(c)(3), are not required to file Form 990 or Form 990-EZ, but are required to file Form 990-T if they had unrelated business income; and (4) private foundations, which are tax-exempt under section 501(c)(3), file Form 990-PF, not Form 990; therefore, a Form 990-T filed by a private foundation would not have a matching record in the Form 990 sample.
- [10] In order to shift from a tax concept to a "receipts and expenditures" concept of income and expenses, adjustments were made to develop revised income totals from both tax forms that represented, to the extent possible, the organizations' actual financial involvement in conducting current tax year (1994) operations, and that were more analogous for comparing total financial activity with unrelated business financial activity. This was accomplished by (1) excluding certain items that were reported for tax purposes and were not current-year income, or were not directly associated with the operation of a business or program, and (2) adding back to income totals (either on Form 990 or Form 990-T, as applicable) certain expense items that were allowed to be subtracted from gross income prior to calculating total income.
- [11] Organizations filing a Form 990-T for 1994 were required to enter at least one, and up to three, industry codes for their principal business activities, based on the amount of gross unrelated business income they generated. If an organization engaged in more than one type of activity, it was instructed to list the code for the largest (primary) unrelated activity (in terms of gross income) first, then the codes for the next two largest activities, in descending order.

- [12] Running a simple computerized query against the database of matched records can list cases where Form 990-T unrelated business income was larger than Form 990 total income. It is obvious in these cases that at least some unrelated income was not included on Form 990. However, when total income on Form 990 is larger than unrelated income on the Form 990-T (which is the expected norm), there are no other specific reporting characteristics available for use in a database query that would easily identify cases where unrelated business income was reported on one return, but not the other. An actual examination of each Form 990/Form 990-T pair of returns would be necessary. (The returns used for this study
- were those originally filed with the IRS and processed prior to any audit or examination procedures.) Total unrelated business income and its components are required to be entered in Form 990's Part VII, Analysis of Income-Producing Activities, but the reporting has been fairly poor and has proven to be inadequate for research purposes thus far.
- [13] For additional information on the Form 990 and Form 990-T integrated sample design, see Harte, James M., and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Turning Administrative Systems Into Information Systems, 1993.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit-sharing, or stock bonus plans	Fiduciary agent for pension, profit-sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title-holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, health, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, health, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, health, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State-chartered credit unions and mutual reserve funds	Providing loans to members

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title-holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit-sharing, or stock bonus plans; or governmental units

NOTE: Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt beginning with tax years after June 30, 1992.

Table 1.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Internal Revenue Code Section Describing Type of Tax-Exempt Organization

[All figures are estimates based on samples--money amounts are in thousands of dollars]

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.6 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$4.5 million.

⁵ Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt beginning with tax years after June 30, 1992.

NOTES: Detail may not add to totals because of rounding. See the Appendix to this data release for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

Table 2.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Size of Gross UBI

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.6 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$4.5 million.

⁵ The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$4.5 million.

NOTE: Detail may not add to totals because of rounding.

Table 4.--Returns with Positive Net Income (Taxable Profit): Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Taxable Profit), and Total Income Tax, by Size of Gross UBI

[All figures are estimates based on samples--money amounts are in thousands of dollars]

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For exempt organizations reporting net income, cost of sales and services was \$659.2 million.

NOTE: Detail may not add to totals because of rounding.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting positive net income, total proxy tax was \$1.9 million.

⁴ The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ For definitions of the sources of gross unrelated business income, see the Explanation of Selected Terms section of this data release.

² The gross unrelated business income (UBI) brackets of \$1,000 under \$10,001 and \$10,001 under \$100,000 reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

³ All organizations were required to report each income item, as shown in columns 3 through 26. However, only organizations with gross UBI over \$10,000 were required to report each deduction shown in columns 14 through 45, 48, 49, and 54 through 59 of Table 7. A total of gross UBI is shown separately for these larger organizations in order to facilitate comparison with Table 7.

⁴ Property other than capital assets generally included property of a business nature, in contrast to personal and investment property, which were capital assets.

 $^{^{\}mbox{\scriptsize 5}}$ Income from real property and personal property leased with real property.

⁶ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁷ Annuities, interest, rents, and royalties.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.6 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 14 through 49 and 52 through 59.

⁴ Excludes \$38.7 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1 for explanation.

⁵ Excludes \$1.5 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1 for explanation.

⁶ This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

by Margaret Riley

onprofit organizations that are granted Federal tax exemption based on their mission-related purposes are allowed, within certain limits, to generate income from "unrelated business activities," though the income from these activities is subject to taxation. About 3 percent of all organizations recognized as tax exempt under the Internal Revenue Code engaged in such non-mission-related activities for 1995, and they generated \$6.3 billion of gross unrelated business income (UBI) [1].

Of the 36,394 nonprofit organizations that filed a Tax Year 1995 Form 990-T, *Exempt Organization Business Income Tax Return*, about half reported aggregate net income (taxable profit) totaling \$0.9 billion, with the remainder reporting a combined deficit of \$1.9 billion [2]. Consistent with the preceding 4 tax years, nonprofit organizations, as a group, reported total deductions for 1995 that exceeded total gross income. These deductions amounted to \$7.3 billion.

The income tax on nonprofit organizations' unrelated business taxable profits for 1995 totaled \$276.6 million. After adjustments for other taxes and certain credits were taken into account, these organizations incurred a total Federal income tax liability of \$277.5 million [3].

Finances

Income and Deductions

Figure A, which contains selected financial data for Tax Years 1991 to 1995, shows that gross UBI increased by 17 percent between 1994 and 1995, while the number of returns filed increased by only 2 percent. Average gross income per return rose by 14 percent between these two years. The number of organizations reporting positive net income, or taxable profit, declined by 2 percent; returns without net income (zero taxable income or a deficit) increased by 7 percent. Fifty-six percent of all filers for 1995 were organizations with gross UBI above \$10,000. These organizations had to fill out a complete Form 990-T, unlike smaller organizations

Margaret Riley is a statistician with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief. with gross UBI of \$10,000 or less, which were not required to report detailed income and expense items. The larger organizations accounted for nearly the entire amount, 99 percent, of gross UBI reported.

Within the major Form 990-T financial items shown in Figure A, the largest 5-year increase for nonprofit organizations engaged in unrelated business activities was in their income tax liability. The tax on unrelated business income rose 137 percent over the period, partly as a result of the 107-percent increase in taxable profits. These increases are analyzed in the following section on Taxes. Further analysis of organizations' net income (less deficit) is provided later in this section.

Figure B shows a distribution of Forms 990-T by size of gross UBI for 1995. A small number of organizations that reported large amounts of gross UBI were responsible for most of the total gross UBI reported for 1995. Organizations that had gross UBI of \$500,000 or more were only 4 percent of the population of filers; however, together they reported 73 percent of total gross UBI (see Table 2 at the end of this article). In contrast, organizations that reported much smaller amounts of gross UBI, under \$100,000, made up 82 percent of all filers but accounted for only 9 percent of all gross UBI reported.

Gross profit (less loss) from sales and services was, by far, the largest component of total gross UBI (see Table 6 at the end of this article). For 1995, this amounted to \$3.2 billion, or 52 percent of total gross UBI. It is important to note that the costs associated with selling goods and performing services, which for 1995 were \$1.7 billion, were subtracted from gross receipts (totaling \$5.0 billion) in order to compute the amount of gross profit (less loss) included in total gross UBI. These costs, therefore, are not included in the \$7.3 billion of total deductions reported on Form 990-T, but they may include many of the same types of expenses that are components of total deductions, such as salaries and wages, utilities, and depreciation.

Advertising income was the second largest income component reported, accounting for 16 percent of total gross UBI. Nonprofit "charitable" organizations, business leagues, chambers of commerce, and real estate boards together accounted for 85 percent of total advertising income [4]. These organizations often include, in their mission-related

publications, paid advertisements that are considered "unrelated" and, therefore, taxed as unrelated business income.

Other than the Form 990-T item, "other deductions," which amounted to 32 percent of total deductions, the three largest deductions were for "net operating loss carryover" (21 percent), salaries and wages (13 percent), and direct advertising costs (11 percent) (see Table 7 at the end of this article) [5]. As noted earlier, nonprofit organizations reported aggregate deductions that exceeded aggregate gross income for each of the years 1991-95, so it is not surprising that the net operating loss carryover is typically a large percentage of total deductions. "Other deductions" is a catch-all category for any items not specifically required to be reported elsewhere on the tax return. It included deductions for such items as occupancy expenses; accounting, legal, and other professional fees; office supplies; equipment and other rental fees; payroll services; and travel and education costs.

Certain types of deductions are directly related to the generation of unrelated business income, while others are not. The items mentioned above, along with several others, are considered "directly connected" deductions. Four types are considered "not directly connected"; these are the "specific deduction" (generally \$1,000), contributions paid, "setasides," and "excess exempt expenses." Both categories of deductions are shown in Table 7, and definitions of the four "not directly connected"

Figure B

Exempt Organization Business Income Tax Returns, by Size of Gross Unrelated Business Income (UBI), Tax Year 1995

¹ Organizations with gross UBI under \$1,000 were not required to file a return. Organizations with gross UBI over \$10,000 were required to fill out a more detailed tax return than other filers.

deductions, the net operating loss carryover, and "other deductions" are contained in the Explanation of Selected Terms section.

NOTE: Detail may not add to totals because of rounding. See the Explanation of Selected Terms section of this article for definitions of gross unrelated business income, total deductions, net income (less deficit), unrelated business income tax, and total income tax.

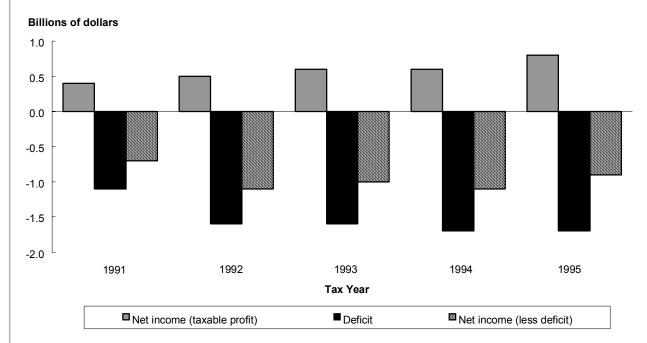

Using "net income (less deficit)" as a measure of an organization's profits, tax-exempt organizations engaging in unrelated business operations, as a whole, appear not to have been particularly profitable, sustaining aggregate losses every year during the 1991-95 period (see Figure C). While the computation of net income (less deficit) is not consistent across various forms of businesses because it is based on tax laws that are specific to each type of entity, it can, nonetheless, be used for a general comparison of each group's profits. Based on Federal tax return data collected for Tax Years 1991 to 1995, nonfarm sole proprietorships, partnerships, and corporations all reported positive amounts of aggregate net income (less deficit) each year during the period [6]. A comparison of these results with the annual aggregate unrelated business losses reported by nonprofit organizations raises questions about

possible reasons for the difference and why organizations would continue to conduct business activities that incur losses year after year.

One possibility is that nonprofit organizations are primarily engaged in tax-exempt mission-related activities and have a certain amount of operational costs associated with conducting these activities, such as salaries and wages, building rents and mortgages, depreciation, utilities, equipment costs, and office expenses. When they also engage in unrelated business activities to supplement mission-related income, they often choose an enterprise that will allow them to use some, if not all, of the same resources, or "inputs," being used to carry on their mission-related activities. Within the boundaries of the tax laws, they can then shift a portion of the cost of these jointly used inputs from tax-exempt mission-related activities to taxable, unrelated activities and,

even though their unrelated enterprises may actually be generating a positive cash flow, their resulting unrelated business taxable income in many cases can be reduced to zero or less [7].

It is, perhaps, this cost-shifting factor that most notably distinguishes the business activities of nonprofit organizations from those of traditional profitmaking entities. Some nonprofit organizations might not incur any new costs for facilities or staff required to conduct unrelated, profit-making activities and, while any real supplemental costs associated with these activities may be only marginal, the organizations are allowed to offset UBI with additional preexisting (mission-related) expenses, which are prorated based on the ratio of unrelated business income to total income. Examples of the use of existing mission-related facilities for unrelated business activities would be a tax-exempt hospital that uses its laboratory and staff to provide testing services for non-hospital physicians or medical offices; a university that charges fees to public users (not faculty, staff, or students) of their parking lots, concert arenas, golf courses, or other facilities; and golf and country clubs that sell food and beverages to nonmembers.

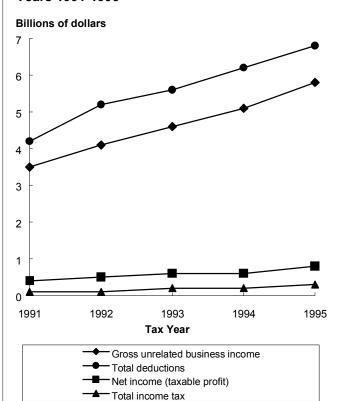

Taxes

In terms of constant dollars, Figure D shows that for Tax Years 1991 to 1995, total gross UBI and total deductions rose steadily throughout the period. Taxable profit and total income tax also rose from 1991 to 1995, but at much lower rates than income and deductions. Annual increases in total income tax were closely tied to increases in taxable profits. Changes in income tax rates for Tax Year 1993 also increased some organizations' total income tax liabilities for the latter 3 years of the period (discussed further, below). For each year in the 5-year period, aggregate total deductions ranged between 116 percent and 127 percent of aggregate total gross UBI (see Figure A for these items). Nonetheless, half of all tax-exempt organizations engaging in unrelated business activities for 1995 reported aggregate taxable profits totaling \$893.0 million. These total profits were 14 percent of the aggregate gross UBI reported by all organizations for 1995.

As shown previously in Figure A, taxable profit increased 39 percent between 1994 and 1995, the largest year-to-year increase over the 1991-95 pe-

riod. The associated unrelated business income tax (UBIT) rose 44 percent between 1994 and 1995. The UBIT statistics graphically presented in Figure E show that the share of total tax liability reported by tax-exempt trusts was smaller than the share reported by tax-exempt corporations for the first 2 years of the period, edged slightly higher than the corporate share for 1993, and then exceeded the corporate share for 1994 and 1995. While the tax liability of corporate entities remained fairly stable throughout the 5-year period, the trusts were principally responsible for the annual increases in total tax liability. Between Tax Years 1992 and 1993, the highest marginal tax rate for trusts increased 8.6 percentage points, while for

Figure E

Unrelated Business Income Tax, by Type of Entity, Tax Years 1991-1995

corporations it increased only 1 percentage point. Furthermore, tax rate increases for 1993 affected all trusts with taxable profits over \$1,500, but affected only those corporations with taxable profits over \$10,000,000.

Figure F presents tabular unrelated business income tax data for the tax-exempt corporations and trusts for the same 5-year period. Of the two types of organizations, trusts consistently made up a much smaller proportion of all Form 990-T filers reporting UBIT liability, ranging from one-fifth to about one-third. For 1991, trusts comprised 20 percent of the organizations reporting UBIT and accounted for 40 percent of total UBIT. By 1995, they made up 33 percent of all organizations reporting UBIT and accounted for 63 percent of the tax reported. During the period shown, the tax liability shares of corporations and trusts contrasted sharply, when grouped by the amount of taxable profit reported. The amount of

tax reported was greater, annually, for the corporate group reporting taxable profit of less than \$1 million, compared to the corporate group reporting larger amounts of taxable profit. The opposite occurred for trusts. The group of trusts reporting taxable profit of \$1 million or more was responsible for much higher amounts of UBIT liability than the group reporting smaller amounts of taxable profit. For both types of entities and for each year shown in Figure F, the vast majority of organizations fell within the group reporting taxable profit of less than \$1 million.

This is explained by the different tax rates applied to corporations and trusts that have unrelated business taxable income (UBTI) of \$1 million or more [8]. For example, for corporations with UBTI of \$1,000,000 or more, there were four corporate taxable income brackets for Tax Year 1995 that had associated tax rates ranging from 34 percent to 35 percent (35 percent was the maximum rate, but there was an intermediate 38-percent rate applied to taxable income amounts between \$15,000,000 and \$18,333,333). For 1995, there was only one tax rate of 39.6 percent applied to trust taxable income of \$1,000,000 or more.

The UBIT liability of tax-exempt trusts nearly quadrupled from 1991 to 1995. The tax-exempt corporations contributed comparatively less significantly to the 5-year rise in total UBIT liability, reporting UBIT for 1995 that was less than one-and-a-half times larger than the corporate UBIT reported for 1991. These disproportionate shares of UBIT liability can be accounted for by each type of organization's income composition and the effect of stock market performance during the 5-year period.

Corporate tax-exempt entities reported aggregate gross UBI of \$5.5 billion for 1995, with the two items, advertising income and gross profit (less loss) from sales and services, accounting for 77 percent of the total. (These and other statistics for tax-exempt trusts and corporations cited in this section are based on unpublished study data.) The composition of the \$0.8 billion of trust UBI was markedly different, with 87 percent of the total attributable to three items: capital gain net income, partnership income, and investment income. All three of these components of trust income are directly influenced by stock market performance, while the two corporate UBI components generally are not.

Corresponding with the peaks in the UBIT liabil-

NOTE: Detail may not add to totals because of rounding.

ity of tax-exempt trusts shown in Figure E for 1993 and 1995 were respective increases in rates of return on stock market investments that resulted in substantial increases in profits, especially for 1995. For that year, 89 percent of all tax-exempt trusts reported taxable profits, compared to only 41 percent of the tax-exempt corporations. An increase in the maximum tax rate applied to trust income, from the 1992 rate of 31 percent to the 1993 rate of 39.6 percent, also contributed to the increase in trusts' UBIT liability for 1993.

The effect that these organizations' contrasting primary income sources have on their respective taxation can be emphasized by comparing corporate and trust statistics for two major investment items reported on Form 990-T--"capital gain net income" and "investment income." Capital gains rose 105 percent for trusts and 123 percent for corporations between 1994 and 1995; however, capital gains comprised 32 percent of trust gross UBI, but less than 1 percent of corporate gross UBI. The situation

is similar for investment income. While investment income increased 43 percent for trusts and was 34 percent of their gross income, it increased 28 percent for corporations but was only 2 percent of corporate gross UBI. The investment income disparity between corporations and trusts is primarily due to the unrelated business income tax laws. Most corporations, other than Internal Revenue Code section 501(c)(7) social and recreational clubs, generally are not taxed on investment income unless it is debtfinanced. Section 501(c)(9) voluntary employees' beneficiary trusts and section 501(c)(17) supplemental unemployment benefit trusts may be taxed on all of their investment income if they are fully funded. (See the definitions of Investment Income (Less Loss) and Unrelated Debt-Financed Income in the Explanation of Selected Terms section of this article.)

The amount of deductions that each type of organization can use to offset its largest sources of income is another factor affecting taxation. The

nonprofit trusts, which operate mainly as managers of investment income, are generally limited in the amount of expenses that are allowed to be deducted from investment income. As mentioned previously, nonprofit corporations' main sources of unrelated business income for 1995 were advertising and gross profit (less loss) from sales and services. Because of the more labor-intensive nature of these unrelated business operations, corporations can deduct comparatively larger amounts of directly-related expenses. For 1995, trusts filing Form 990-T accounted for 57 percent of the total of positive net income (taxable profit) reported. In addition, the average amount of taxable profit for the trusts was \$85,420, compared to an average of \$31,530 for the corporations.

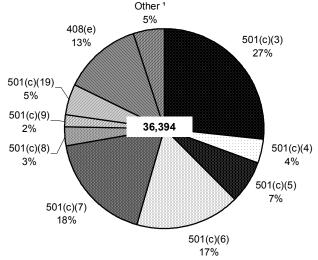

Organizations Classified by Internal Revenue Code Section

Figure G shows the distribution of returns filed, by the Internal Revenue Code section under which an organization received tax exemption. Twenty-seven percent of the filers were nonprofit charitable organizations that were tax-exempt under section 501(c)(3). Three-quarters of all returns were filed by four types of organizations: the nonprofit charitable organizations; social and recreational clubs exempt under section 501(c)(7); business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6); and fiduciary agents for Individual Retirement Arrangements (IRA's) exempt under section 408(e). (See the Appendix to this article for a description of the various types of tax-exempt organizations.)

As can be seen in Figure H, section 501(c)(3) charities accounted for 57 percent of total gross UBI for 1995, and section 501(c)(6) business leagues, chambers of commerce, and real estate boards accounted for an additional 12 percent. Together, five types of organizations, grouped by Internal Revenue Code section, reported nearly 90 percent of total gross income from unrelated business activities: the section 501(c)(3) and 501(c)(6) organizations mentioned above, plus civic leagues and social welfare organizations exempt under section 501(c)(4), social and recreational clubs exempt under section 501(c)(7), and voluntary employees' beneficiary associations exempt under section 501(c)(9). When compared to similar data compiled for 1991, the

distribution patterns shown in Figures G and H remained practically unchanged for 1995.

Table 1 at the end of this article shows major financial data items for various types of organizations, in terms of the Internal Revenue Code section that describes them. The following discussion of these organizations uses data from Table 1, along with unpublished study data. In addition to accounting for the largest share of gross UBI reported, the charities were responsible for 64 percent of total deductions, 23 percent of positive net income (taxable profits), and 21 percent of total income tax. They comprised 17 percent of all organizations reporting taxable profits. Combined, the IRA fiduciary agents and the social and recreational clubs accounted, with nearly equal shares, for almost half of all organizations reporting taxable profits, but only 10 percent of the total amount of taxable profits and 6 percent of total income tax.

A large majority of the section 501(c)(9) voluntary employees' beneficiary associations, 92 percent, were organized as trusts. Even though these organizations made up only 2 percent of all Form 990-T filers reporting taxable profits and were responsible for only 7 percent of total gross UBI, they were liable for the largest percentage of total income tax reported by any Code section group. Along with section 401(a) pension, profit-sharing, and stock bonus plans, the two groups were liable for 58 percent of total income tax reported. The 401(a) plans represented only 6 percent of organizations reporting taxable profits and accounted for only 3 percent of total gross UBI.

One of the reasons these organizations' total income tax liability was so large for Tax Year 1995 was the extremely high rates of return earned on investments during that period. For both types of organizations, investments were their primary source of gross UBI. The positive influence of investment performance during nonprofit organizations' 1995 tax periods can be seen when comparing percentages of 1991 income tax liability to 1995 percentages. For 1991, the section 501(c)(3) organizations accounted for 35 percent of total income tax, while the section 501(c)(9) and 401(a) organizations together accounted for another 35 percent. For 1995, the tax liability shares for these organization groupings were 21 percent and 58 percent, respectively.

Usually, the section 501(c)(9) and 401(a) organi-

zations can only offset gross UBI with comparatively small amounts of deductions, so their unrelated business taxable income is relatively high. Because their investment portfolios are typically overseen by only one or two trust managers, deductions for salaries and wages and other directly-connected expenses are quite small. In terms of contrast, the section 501(c)(3) charities had a 64-percent share of all deductions reported, as previously stated, compared to a joint 3-percent share reported by the section 501(c)(9) and 401(a) organizations.

Another reason why the voluntary employees' beneficiary associations took smaller deductions than most other types of organizations was that they were allowed to take as a deduction amounts of income that were set aside to provide for future employee benefits; but if these "set-asides" exceeded qualified asset account limits, as specified in Internal Revenue Code section 419A, then the excess was not allowed as a deduction from gross unrelated business income (see the definition of Set-Asides in the Explanation of Selected Terms section at the end of this article). In the case where a section 501(c)(9) association overfunded an employee welfare benefit plan, its investment income could not be set aside tax-free. It was taxable as unrelated business income.

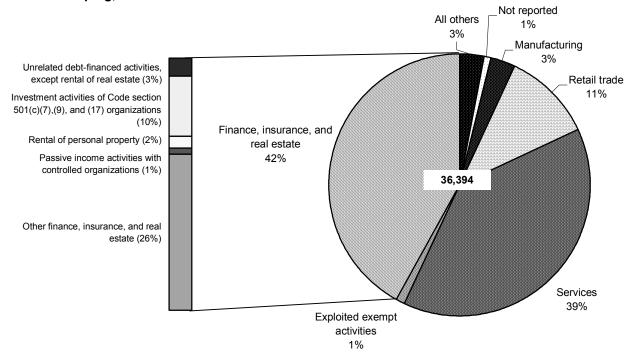

Primary Unrelated Business Activities

The discussion of unrelated business activities that follows takes into consideration only the primary (first) activity code of three possible codes reported on Form 990-T. If an organization was engaged in more than one unrelated business activity, it was instructed to list the code of the largest activity in terms of gross UBI first, and then the codes for the next two largest activities. Because it is not possible to distribute gross UBI according to each type of activity when more than one activity was reported (filers were not required to do this), the amount of gross UBI assigned to primary unrelated business activities discussed in this section is overstated for organizations that reported multiple activities.

As was the case with the distribution of organizations by the Internal Revenue Code section under which they received income tax exemption, presented in the previous section, the apportioning of organizations filing Forms 990-T by primary unrelated business activity for 1995, shown in Figure I, looks very similar to that for 1991, suggesting no

Figure I

Exempt Organization Business Income Tax Returns, by Primary Unrelated Business Activity or Industrial Grouping, Tax Year 1995

significant change over the 5-year period. The primary unrelated business activity reported on 95 percent of returns filed for 1995 fell within four major industrial groupings: services; finance, insurance, and real estate; retail trade; and manufacturing. For 1991, about 88 percent of returns filed had a primary activity within one of these four major industrial groupings [9]. For 1995, these industrial groupings were also responsible for 97 percent of total gross UBI, up 4 percentage points since 1991, with services producing \$2.8 billion; finance, insurance, and real estate, \$2.5 billion; retail trade, \$0.6 billion; and manufacturing, \$0.2 billion (see Table 5 for additional information on the major business activities or industrial classifications reported).

The industrial classifications from which Form 990-T filers were required to make a choice included 155 industry codes and 5 additional categories that were established specifically for exempt organizations engaging in unrelated business activities, to reflect particular provisions of the Internal Revenue Code [10]. These five classifications were unrelated Debt-Financed activities other than rental of real

estate; investment activities of section 501(c)(7), (9), and (17) organizations; rental of personal property; passive income (generally, investment income) activities with controlled organizations; and "exploited exempt activities." In Figure I and Table 5, the first four activities mentioned above are treated as part of the finance, insurance, and real estate division. The exploited exempt activities classification is treated separately in Figure I and Table 5 as one of the major industrial groupings [11].

Figure J shows selected primary unrelated business activities or industrial subgroups that fell within the four major industrial groupings that accounted for 97 percent of total aggregate gross UBI for 1995. The selected activities or subgroups included in the figure are those that had the largest percentages of gross UBI within their respective major industrial groupings [12].

Of the 14,305 organizations reporting various services as their primary unrelated activity, 57 percent provided business services, most of which was advertising (including printing). Income from business services contributed 42 percent to the total of

¹ Miscellaneous retail is a specific subgroup of the retail trade major industrial grouping and includes mainly drugstores and proprietary stores, gift shops, book stores, and "miscellaneous retail stores." A small number of retail activities that were not part of the eating and drinking places or miscellaneous retail subgroups are included in "all other retail trade." These were mainly food stores, apparel and accessory stores, and "general merchandise" stores.

NOTE: Detail may not add to totals because of rounding

gross UBI reported within the services industrial grouping and 19 percent to the total reported by all Form 990-T filers. The business service of advertising (including printing) was reported on more returns, overall, than any other single unrelated business activity, more than 18 percent of the total. In dollar terms, its nearly \$1 billion share of total gross UBI, 15 percent, was also the largest for a single primary activity. The majority of organizations that indicated advertising as their primary unrelated

business activity were business leagues and a variety of nonprofit charitable associations and societies.

The health services subgroup was responsible for 23 percent of gross UBI generated from services and 10 percent of that generated from all activities. Within this subgroup, the medical laboratory activity was reported most often and accounted for over 6 percent of total gross UBI reported by all organizations. Health services was the third most frequently reported activity, accounting for 7 percent of organi-

N/A - Not applicable.

zations in the services industrial grouping. Organizations reporting some type of health services as their primary unrelated business activity typically included hospitals, medical centers, and health care facilities.

Another 24 percent of the organizations within the services industrial grouping reported amusement and recreation services as their primary unrelated business activity. About 7 percent of total gross UBI was attributable to organizations classified in this subgroup. These types of activities were reported by a wide range of organizations: golf and country clubs; civic leagues; social welfare organizations; fraternal organizations; veterans' organizations; and nonprofit charitable societies, associations, and guilds. The latter group, nonprofit charitable organizations, mainly included educational institutions and athletic clubs.

Finance, insurance, and real estate enterprises were conducted as a primary unrelated business by 42 percent of the organizations filing Form 990-T for 1995. The 15,368 organizations in this major industrial grouping also accounted for 39 percent of the total gross UBI reported by all filers. Organizations engaging in insurance accounted for 43 percent of the \$2.5 billion total of gross UBI reported by organizations that were part of the finance, insurance, and real estate industrial grouping, closely followed by those engaged in finance activities, accounting for 40 percent. These two groups of organizations were also responsible, respectively, for 17 percent and 16 percent of total aggregate gross UBI. Organizations involved in real estate activities accounted for another 17 percent of the finance, insurance, and real estate industrial grouping's gross UBI and 7 percent of total gross UBI reported by all organizations.

Most of the organizations that engaged in unrelated activities in the insurance industry were county farm bureaus and trade associations. Section 501(c)(3) and (c)(4) organizations administering health or life insurance plans made up less than 1 percent of the insurance subgroup, but they reported 87 percent of the gross UBI attributable to the group and 15 percent of the gross UBI reported by all Form 990-T filers.

The finance subgroup encompassed many different types of nonprofit organizations. Principally among them were the Internal Revenue Code section 501(c)(7), (9), and (17) organizations; nonprofit development corporations; trustees of pension,

profit-sharing, and stock-bonus plans; trustees of Individual Retirement Arrangements; and an assortment of nonprofit charitable organizations, mainly private foundations, hospitals, medical centers, colleges, and universities. "Investment activities by section 501(c)(7), (9), and (17), organizations," a special category set up for Form 990-T filers, comprised 36 percent of returns filed and 57 percent of gross UBI reported within the finance subgroup. They also accounted for 9 percent of total aggregate gross UBI.

The majority of organizations that carried on real estate activities were nonprofit charitable organizations; however, large numbers of civic and business leagues, labor unions, real estate boards, social and recreational clubs; fraternal organizations, and trusts acting as fiduciary agents for retirement funds also reported real estate as their primary unrelated business activity.

Within retail trade, carried on by 3,913 exempt organizations, 68 percent of the primary activities reported were in the "eating and drinking places" subgroup, followed by "miscellaneous retail" activities, reported on 29 percent of the returns. Together, these two activity subgroups accounted for 94 percent of the gross UBI attributable to the retail trade industrial grouping, but only 8 percent of the total of gross UBI reported by all Form 990-T filers.

Organizations operating eating and drinking places as an unrelated activity were mainly hospitals, golf and country clubs, fraternal organizations, and veterans' organizations. The main types of retail establishments reported within the miscellaneous retail subgroup, ordered by the amount of gross UBI generated, were drugstores and proprietary stores; gift, novelty, and souvenir shops; "miscellaneous retail stores"; and book stores. Collectively, these four types of activities made up 97 percent of the primary activity classifications reported within the miscellaneous retail subgroup and produced 87 percent of the subgroup's gross UBI. A small number of primary activities were reported separately from the eating and drinking places subgroup and the miscellaneous retail subgroup and, therefore, are considered "other" retail trade in Figure J. These included food stores, apparel and accessory stores, and "general merchandise" stores.

Hospitals and medical centers were the most prevalent organizations reporting drugstores as a

primary activity. Gift shops were reported as an unrelated business activity mainly by nonprofit associations, societies, museums, and performing arts centers. The operation of bookstores was the primary activity conducted by colleges, universities, and religious organizations.

There were 912 organizations that reported unrelated activities in the manufacturing division. The majority, 81 percent, could be categorized under printing and publishing. While 96 percent of the manufacturing division's total gross unrelated business income was attributable to the printing and publishing industrial subgroup, this subgroup accounted for only 3 percent of total gross UBI reported by all organizations and only 2 percent of all Form 990-T returns filed. Business leagues, real estate boards, and various types of nonprofit charitable organizations accounted for 66 percent of the printing and publishing carried on by tax-exempt organizations as their principal unrelated trade or business activity. Civic leagues, social welfare organizations, labor and agricultural organizations, and fraternal beneficiary organizations accounted for another 30 percent.

Figure K shows, for the years 1991-1995, the number of returns filed and the amount of gross UBI

reported by the four major industrial groupings discussed above. The largest portion of gross UBI reported for each of the 5 years can be attributable to unrelated business activities in the services industrial grouping, followed by income generated within the major industrial grouping of finance, insurance, and real estate. Within these two classifications, nonprofits reported gross UBI for 1995 that was 84 percent of the aggregate total.

Over the 5-year period, the gross UBI of nonprofit organizations reporting finance, insurance, or real estate as their primary unrelated business activity grew by more than 116 percent, and the number of Forms 990-T they filed increased by 30 percent. The number of filers providing unrelated business services rose 19 percent, and the gross UBI attributable to them increased 88 percent. Income from manufacturing grew over 85 percent, but the number of returns filed reporting manufacturing as a primary activity dropped 39 percent. The 5-year growth of 49 percent in the gross UBI of organizations engaging primarily in retail trade activities was much smaller than that for manufacturing, but the number of returns filed with a primary activity of retail trade increased by 16 percent.

NOTE: Detail may not add to totals because of rounding

Summary

Nonprofit organizations filing Form 990-T to report income from "unrelated business" activities, those that were not related to their nonprofit missions, grossed \$6.3 billion of unrelated business income (UBI) for 1995. After taking deductions totaling \$7.3 billion, the 36,394 organizations that filed Form 990-T reported an aggregate net income (less deficit) of \$1 billion. About half of the organizations filing Form 990-T reported aggregate net income (taxable profit) of \$0.9 billion, with an associated total income tax liability of \$277.5 million.

Between 1991 and 1995, nonprofit organizations' net income (taxable profit) grew by 107 percent and their total income tax liability rose 137 percent. As a group, however, these organizations sustained aggregate losses every year during the 5-year period, with total deductions exceeding total gross income each year. During that time, their gross unrelated business income and total deductions grew by 86 percent and 79 percent, respectively.

For 1995, about 27 percent of the organizations filing Form 990-T were nonprofit "charitable" organizations that were tax-exempt under Internal Revenue Code section 501(c)(3). Another 48 percent were business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6); social and recreational clubs exempt under section 501(c)(7); and fiduciary agents for Individual Retirement Arrangements (IRA's) exempt under section 408(e). Together, the section 501(c)(3) and 501(c)(6) organizations reported nearly 70 percent of total gross UBI for 1995. The distribution of organizations by Internal Revenue Code section, in terms of the number of filers and the amount of gross UBI reported, did not change significantly from 1991 to 1995.

There also appears to be no significant change when comparing the apportioning of Forms 990-T by primary unrelated business activities reported for 1995 to that for 1991. Ninety-five percent of the primary business activities for 1995, and 88 percent for 1991, fell within four major industrial groupings-services; finance, insurance, and real estate; retail trade; and manufacturing [13]. The gross unrelated business income of organizations involved in finance, insurance, and real estate activities grew most rapidly over the 5-year period, when compared to other industrial groupings, increasing by more than

116 percent between 1991 and 1995.

Data Sources and Limitations

The statistics in this article are based on a sample of Tax Year 1995 Forms 990-T, Exempt Organization Business Income Tax Return. The Internal Revenue Service required organizations having accounting periods beginning in 1995 (and, therefore, ending between December 1995 and November 1996) to file a 1995 Form 990-T. The associated required filing period for Tax Year 1995 Forms 990-T generally was May 1996 to April 1997 (April 1996 to March 1997 for Internal Revenue Code section 401(a) and 408(e) trusts), but extensions of time to file beyond this period were granted to many organizations. Because the accounting periods of the organizations filing a 1995 return vary, the financial activities covered in this article span the period January 1995 through November 1996 (although the majority of activities occurred during Calendar Year 1995).

The population from which the 1995 Form 990-T sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1996 and 1997. The returns in the sample were stratified based on the size of gross unrelated business income (UBI). A sample of 7,278 returns was selected from a population of 36,736. After excluding returns that were selected for the sample but later rejected, the sample size was 7,231 and the estimated population size was 36,394. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1995. (For example, a final return filed for the short period of January 1996 -June 1996 may have been computer-selected for the 1995 sample based on the criterion of having an ending accounting period that fit into the December 1995 to November 1996 range for a Tax Year 1995 return, but it would be rejected because, in actuality, it was a Tax Year 1996 return.)

The 1995 Form 990-T study design incorporated a special "integrated" sample to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations that filed both forms. Under this program, the Form 990-T sample included unrelated business income tax returns filed by any organizations whose Form 990 (*Return of Organization Exempt From Income Tax*) information

returns were selected for either of two other Statistics of Income samples, one that included charities tax-exempt under section 501(c)(3), and another sample that included organizations tax-exempt under sections 501(c)(4) through 501(c)(9) [14].

Returns selected for the two Form 990 samples were a determining factor in the selection of returns that were included in the integrated portion of the Form 990-T sample. The Form 990-T sample was designed so that if a return was not initially selected, based on independent Form 990-T sampling criteria. it was subjected to further sampling based on a Forms 990/990-T matching process. Under this process, the Employer Identification Numbers (EIN's) of Form 990-T returns that were not initially selected for the Form 990-T sample were compared to the EIN's of returns selected for the two Form 990 SOI samples. When a match occurred, the Form 990-T was added to the independently selected Form 990-T sample. These specially matched returns, along with the independently selected Forms 990-T that also had counterparts in the Form 990 samples. formed the "integrated" portion of the Form 990-T sample.

Sampling rates ranged from a minimum of 2.6 percent (Form 990-T gross UBI was less than \$20,000, with either no Form 990 match or a Form 990 match to a section code 501(c)(3) return with assets under \$2,500,000) to a maximum of 100 percent (either Form 990-T gross UBI was \$300,000 or more, or Form 990-T had any amount of gross UBI and matched to a Form 990 with assets of \$10,000,000 or more) [15]. Other Forms 990/990-T matches within various ranges of gross UBI, assets, and Internal Revenue Code sections were selected at rates ranging from 4 percent to 40 percent.

The information presented in this article was obtained from returns as originally filed with the IRS. The data were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV),

should be taken into account. Figure L shows CV's for selected financial data. CV's are not shown for returns with gross UBI of \$500,000 or more because they were sampled at a 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix, located near the back of this issue of the *SOI Bulletin*.

Figure L

Coefficients of Variation for Selected Items, Tax Year 1995

	Gross							
	unrelated	Total	Net income	Total				
Size of gross unrelated	business	deductions	(taxable	income				
business income	income		profit)	tax				
	Coefficient of variation (percentages)							
	(1) (2) (3) (4)							
Total	1.47	1.37	1.43	1.42				
\$1,000 under \$10,001 ¹	3.37	9.13	7.02	7.45				
\$10,001 under \$100,000 1	1.62	4.97	5.68	6.46				
\$100,000 under \$500,000	0.89	1.48	3.47	3.82				
\$500,000 or more	N/A	N/A	N/A	N/A				

¹ The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required).
Organizations with gross UBI below \$1,000 were not required to file Form 990-T.
N/A - Not applicable.

Explanation of Selected Terms

Advertising Income.--Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Internal Revenue Code section 501(c)(7), (9), and (17) organizations (each described in the Appendix to this article) reported gross advertising

income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.--Generally, organizations required to file Form 990-T (except organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17)) were not taxed on net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), and (17) organizations.)

Contributions.--To the extent permissible under the Internal Revenue Code, a deduction was allowed for contributions or gifts actually paid within the tax year to, or for the use of, another entity that was a charitable or governmental organization described in Code section 170(c). Any unused contributions carried over from earlier years were also allowed. The contributions deduction was allowed whether or not directly connected with the carrying on of a trade or business.

Deductions Directly Connected With Unrelated Business Income.--These were deductions allowed in computing net income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to carrying on an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-financed income; those directly connected with investment income of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss carryover"; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly-connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, each defined below), except for two items that were required to be reported separately: the "net operating loss carryover" and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported, when applicable, by all organizations with positive taxable income; the other types of deductions not directly connected with UBI were reported separately, when applicable, only by exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-Asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.--The two types of "excess" expenses allowed as deductions from unrelated business income were (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be

used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.--In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.--This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, an Internal Revenue Code section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI).--This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in comput-

ing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings for each component.)

Income from Controlled Organizations.--When an exempt organization controls another organization (as described below), the gross annuities, interest, rents, and royalties from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is tax-exempt or not. For Tax Year 1995 "control" meant: (a) for a stock corporation, the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and ownership of at least 80 percent of the total number of shares of all other classes of stock of the corporation; or (b) for a nonstock organization, at least 80 percent of the directors or trustees of the organization were either representatives of, or directly or indirectly controlled by, a tax-exempt organization. The rules for debt-financed property did not apply to passive income from controlled organizations. (See the explanation of Unrelated Debt-Financed Income.)

Income (Less Loss) from Partnerships.--If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).--This item was reported only by organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17) (each described in the Appendix to this article) and included such income as gross unrelated debt-financed income, gross income from the ownership or sale of

securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-Asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), and (17) organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), and (17) did not report "investment income (less loss)." Generally, these organizations' investment income (dividends, interest, rents, and annuities) and royalty income were not taxed as unrelated business income, unless it was income from a controlled organization (excluding dividends) or debt-financed income, or the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-Financed Income.)

Net Capital Loss (Trusts Only).--If a trust had a net loss from sales or exchanges of capital assets, it was allowed a deduction for the amount of the net loss or \$3,000, whichever was lower. (Corporations were not allowed to deduct any excesses of capital losses over capital gains.) Trusts reported the net capital loss deduction on Form 990-T as a negative component of gross unrelated business income. Most of the trusts filing Form 990-T were Individual Retirement Arrangements (IRA's); employee pension, profit-sharing, or stock bonus plans; and employees' beneficiary associations providing for payment of life, sickness, health, or other benefits to members.

Net Gain (Less Loss), Sales of Noncapital Assets.--This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties, which were capital assets.

Net Income (Less Deficit).--This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. On a return-by-return basis, the result of this computation was either positive (net income), negative (deficit), or zero. Net income

represented taxable profit, which was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Net Operating Loss Carryover.--The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exemptfunction income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit from its unrelated trade or business activities. The statistics in this article represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.--This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for accounting, legal, consulting, or financial management services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).--This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Proxy Tax.--This was a tax on certain nondeductible lobbying and political expenditures paid or incurred after December 31, 1993, by organizations that were tax-exempt under Internal Revenue Code sections 501(c)(4), 501(c)(5), and 501(c)(6). If the

organization failed to notify its members regarding their shares of dues to which nondeductible lobbying and political expenditures were allocable, or if the notice did not include the entire amount of dues that were allocable, then the proxy tax was imposed on the organization. It was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to the organization's members, multiplied by 35 percent. The proxy tax was required to be reported on Form 990-T and was included in total income tax; however, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities. For this reason, and because the SOI sample did not include returns with gross unrelated business income (UBI) below the \$1,000 filing threshold, Forms 990-T filed solely to report the proxy tax (no UBI reported) were excluded from the SOI sample. Organizations whose returns were included in the SOI sample reported an aggregate \$3.9 million of proxy tax. Based on an unpublished tabulation of data from the IRS Business Returns Transaction File, a total of \$11.8 million of proxy tax was reported on 665 Forms 990-T for Tax Year 1995. It is estimated that about 60 percent of these 665 returns were filed solely to report the proxy tax and, thus, were excluded from the SOI sample.

Rental Income.--For organizations tax exempt under Internal Revenue Code sections other than 501(c)(7), (9), and (17), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in computing unrelated business taxable income. In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed

income, in that order. For organizations tax-exempt under sections 501(c)(7), (9), and (17), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-Financed Income.)

Set-Asides.--These amounts were allowed to social clubs (Internal Revenue Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), and supplemental unemployment benefit trusts (section 501(c)(17)) as a deduction from investment income. The deduction was equal to the amount of passive income (generally, investment income) that these organizations set aside (1) to be used for charitable purposes or (2) to provide payment of life, health, accident, or other insurance benefits (section 501(c)(9) and (17) organizations only). However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.--The specific deduction generally was a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations that had positive taxable income after all other types of deductions were taken. The specific deduction was \$1,000 or the amount of positive taxable income, whichever was less.

Total Deductions.--Total Deductions included both deductions reported on the main part of Form 990-T and expense items reported on attached schedules. It excluded cost of sales and services (\$1.7 billion for 1995), which was subtracted from gross receipts from sales and services in computing gross profit (less loss) from sales and services. Gross profit (less loss) from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services was reported on Form 990-T as a lump-sum total, but may have included amounts attributable to depreciation, salaries and wages, and certain other types of deductible items. For this reason, the total amount shown for some of the separately reported components of total deduc-

tions, such as "salaries and wages," may be understated.

Total Income Tax.--Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures, the tax from recomputing certain prior-year credits ("recapture taxes"), the "alternative minimum tax," and the "environmental tax."

Unrelated Business Income.--This was income of a tax-exempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.--This was the tax imposed on unrelated business net income (taxable profit). It was determined based on the regular corporate or trust income tax rates that were in effect for the 1995 Tax Year, as shown in the following schedules.

Tax Rates for Corporations (Section 11 of the Internal Revenue Code)

Amount of unrelated business taxable income is:

			Of the
	But not		amount
Over	over	Tax is:	over
\$ 0	\$50,000	15%	\$0
50,000	75,000	\$7,500 + 25%	50,000
75,000	100,000	13,750 + 34%	75,000
100,000	335,000	22,250 + 39%	100,000
335,000	10,000,000	113,900 + 34%	335,000
10,000,000	15,000,000	3,400,000 + 35%	10,000,000
15,000,000	18,333,333	5,150,000 + 38%	15,000,000
18,333,333		35%	0

Tax Rates for Trusts

(Section 1(e) of the Internal Revenue Code)

Amount of unrelated business taxable income is:

			Of the
	But not		amount
Over	over	Tax is:	over
\$ 0	\$1,500	15%	\$0
1,500	3,700	\$232.50 + 28%	1,500
3,700	5,600	834.50 + 31%	3,700
5,600	7,650	1,423.50 + 36%	5,600
7,650		2,161.50 + 39.6%	7,650

Unrelated Debt-Financed Income.--Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debt-financed income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debt-financed property, and the gain was treated as unrelated debt-financed income. Income from debt-financed property did not include rents from personal property (e.g., computers or furniture) leased with real property, certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported all debt-financed income as "Investment Income (Less Loss)." All other organizations reported debt-financed income separately.

Notes and References

[1] This is based on a total of 1,162,960 exempt organizations reported in the *1997 Internal Revenue Service Data Book*, Publication 55B.

The total excludes Internal Revenue Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations. none of which reports tax on Form 990-T. Also, the total is understated because it excludes churches, exempt under Code section 501(c)(3). which are not required to apply for recognition of tax exemption unless they desire to obtain an Internal Revenue Service (IRS) ruling. However, these churches are required to file Form 990-T if they have unrelated business income. Because of the understatement of the total number of exempt organizations, the proportion of all exempt organizations that filed Form 990-T may be lower than 3 percent.

- [2] Organizations that are recognized as tax exempt under section 501(a) of the Internal Revenue Code, and described in Code sections 401(a), 408(e), and 501(c), must file a Federal income tax return (Form 990-T) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax-exempt status. Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations file tax forms other than Form 990-T. Returns filed by organizations with gross unrelated business income (UBI) below the \$1,000 filing requirement threshold were excluded from the statistics presented in this article. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer did not realize that the payee was a tax-exempt organization.
- [3] While the largest share of total income tax was the tax on unrelated business income, total income tax could have also included the "proxy tax" on certain lobbying expenditures, "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), the "alternative minimum tax" (AMT), and the environmental tax (an excise tax levied on certain corporations, computed based on

their "modified alternative minimum tax"). Also, the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit) were subtracted from unrelated business income tax in computing total income tax. Total applied credits for 1995 were \$3.4 million, and total additional taxes were \$4.3 million.

The amount of additional taxes is understated because Forms 990-T filed solely to report the proxy tax (no unrelated business income was reported) were excluded from the SOI sample and, therefore, are not represented in these statistics. Based on returns in the SOI sample, the amount of the proxy tax included in total income tax was \$3.9 million. This amount is attributable to organizations that had gross UBI above the \$1,000 filing threshold and also reported the proxy tax. Based on an unpublished tabulation of data from the IRS Business Returns Transaction File, the total amount of proxy tax reported on all Forms 990-T filed for Tax Year 1995 was \$11.8 million. This amount is attributable to 665 organizations, the majority of which filed Form 990-T only for the purpose of reporting the proxy tax. The proxy tax was required to be reported on Form 990-T and was included in total income tax: however, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities. The proxy tax is defined in the Explanation of Selected Terms section of this article.

- [4] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary, or religious in nature, and also those organizations engaged in activities which foster national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety.
- [5] These percentages are based on deductions reported only by organizations with gross unrelated business income (UBI) over \$10,000. Organizations with UBI between \$1,000 (the filing threshold) and \$10,000 were required to

- report only a total for their deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each deduction item separately, as shown in Table 7 at the end of this article. Additional deductions may be taken as "cost of sales and services," which are not included in total deductions on Form 990-T. For further information, see the definition of Total Deductions in the Explanation of Selected Terms section of this article.
- [6] For historical tax return data on net income (less deficit), and other financial items, reported by nonfarm sole proprietorships, partnerships, and corporations, see *Statistics of Income Bulletin*, Spring 1998, Volume 17, Number 4, Tables 10, 11, and 13, respectively, in the "Selected Historical and Other Data" section, pp. 212-213 and 215-216.
- [7] Resource allocation and other factors affecting nonprofit organizations' choices regarding involvement in unrelated business activities are thoroughly examined in Cordes, Joseph J. and Weisbrod, Burton A., "Differential Taxation of Nonprofits and the Commercialization of Nonprofit Revenues," *Journal of Policy Analysis and Management*, Spring 1998, Volume 17, Number 2, pp. 195-214.
- [8] The unrelated business income tax for nonprofit corporations was determined based on the regular corporate income tax rates in effect for Tax Year 1995. Nonprofit trusts were generally taxed at the regular individual income tax rates established for estates and trusts for Tax Year 1995. Trusts that were eligible for the maximum 28-percent tax rate on capital gain net income figured their tax based on Schedule D of Form 1041, *U.S. Income Tax Return for Estates and Trusts*. The corporate and trust tax-rate schedules are included in the definition of Unrelated Business Income Tax, found in the Explanation of Selected Terms section of this article
- [9] One factor contributing to the rise in the number of returns within these four major industrial groupings was that the number of returns in the

- category, "Not reported," fell from 7 percent for 1991 to 1 percent for 1995. Better research methods were employed for the 1995 study to determine a primary activity code for organizations that did not provide the information on Form 990-T. Many returns that would have been in the "Not reported" category using the 1991 study techniques were classified in one of the specific categories for 1995.
- [10] The total of 160 industry classifications were combined to form the 10 major groupings shown in Table 5. See Office of Management and Budget, *Standard Industrial Classification Manual*, 1987, which lists all of the 4-digit industry codes used by Form 990-T filers for 1995, except for the five additional categories that reflected certain provisions of the Internal Revenue Code pertaining to exempt organizations.
- [11] When an exempt organization commercially "exploits" the goodwill or other intangibles that are created by its exempt activities, and the commercial activities do not contribute significantly to the accomplishment of its exemptpurpose functions, the income generated by the commercial activities is considered "exploited exempt activity income" and is subject to the UBI tax. Examples of exploited exempt activities would be product endorsements and the sale of commercial advertising in a publication that is printed to promote the exempt purpose of an organization. (See the definitions of Advertising Income and Exploited Exempt Activity Income in the Explanation of Selected Terms section.)
- [12] Portions of the data in this section on industry subgroups, particularly the types of organizations included in the subgroups, are from unpublished Statistics of Income tabulations.
- [13] Improved research methods used to assign codes for primary activities when they were not reported on Form 990-T are partly responsible for this increase between 1991 and 1995. See footnote 9, above.
- [14] For the most recent Form 990 annual data on organizations tax-exempt under Internal

Revenue Code sections 501(c)(3) (excluding private foundations and most religious organizations) through 501(c)(9), see Hilgert, Cecelia and Whitten, Melissa, "Charities and Other Tax-Exempt Organizations, 1995," Statistics of Income Bulletin, Winter 1998-1999, Volume 18, Number 3. Private foundations, tax exempt under Code section 501(c)(3), are required to file Form 990-PF (Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation). rather than Form 990. Private foundations were required to report taxable income on Form 990-T, but this type of organization was not included in the integrated sample design. "Nonexempt charitable trusts" (described in Code section 4947(a)(1)) that filed the Form 990-PF information return for 1995 were required to report taxable income on Form 1041, U.S. Income Tax Return for Estates and Trusts, not Form 990-T. For the most recent

- annual data on private foundations, see Arnsberger, Paul, "Private Foundations and Charitable Trusts, 1995," *Statistics of Income Bulletin*, Winter 1998-1999, Volume 18, Number 3. Also recently published is an article containing a 20-year review of the finances of tax-exempt organizations filing Forms 990, 990-PF, and 990-T. See Meckstroth, Alicia and Arnsberger, Paul, "A 20-Year Review of the Nonprofit Sector, 1975-1995," *Statistics of Income Bulletin*, Fall 1998, Volume 18, Number 2.
- [15] For additional information on the Form 990 and Form 990-T integrated sample design, see Harte, James M. and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Turning Administrative Systems Into Information Systems, 1993.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit-sharing, or stock bonus plans	Fiduciary agent for pension, profit-sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title-holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, health, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, health, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their ne earnings to charitable, fraternal, and other specified purposes, without life, health, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State-chartered credit unions and mutual reserve funds	Providing loans to members

Appendix

Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee-funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title-holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit-sharing, or stock bonus plans; or governmental units

NOTE: Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt effective with tax years beginning after June 30, 1992.

Table 1.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Internal Revenue Code Section Describing Type of Tax-Exempt Organization, Tax Year 1995

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.7 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$3.9 million.

⁵ Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt beginning with tax years after June 30, 1992.

NOTES: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

Table 2.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Size of Gross UBI, Tax Year 1995

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Size of gross unrelated	Number of	Gross unrelated business		otal ctions ^{1,2}	Net income (less deficit)		Deficit	Total income tax ⁴	
business income (UBI)	returns	income (UBI)	Number of returns	Amount	Number of returns ³	Amount		Number of returns	Amount
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
Total	36,394	6,279,659	36,229	7,253,305	31,529	-973,648	-1,866,621	18,243	277,481
\$1,000 under \$10,001	15,997	62,731	15,855	97,339	13,638	-34,609	-52,249	9,203	3,326
\$10,001 under \$100,000	13,665	520,430	13,655	735,491	11,857	-215,061	-310,933	6,306	19,118
\$100,000 under \$500,000	5,029	1,083,496	5,018	1,480,745	4,520	-397,249	-517,737	2,054	33,267
\$500,000 under \$1,000,000	856	596,065	855	762,043	761	-165,979	-229,782	352	20,425
\$1,000,000 under \$5,000,000	710	1,411,338	709	1,783,679	631	-372,341	-520,975	263	51,348
\$5,000,000 or more	137	2,605,599	137	2,394,009	123	211,590	-234,945	65	149,998

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.7 billion.

The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

NOTE: Detail may not add to totals because of rounding.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

[&]quot;Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$3.9 million.

Table 3.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Size of Net Income (Taxable Profit) or Deficit, Tax Year 1995

[All figures are estimates based on samples--money amounts are in thousands of dollars]

\$1,000,000 or more	92	1,668,979	91	1,133,012	92	535,968		92	181,029

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.7 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$3.9 million.

⁵ Includes "breakeven" returns with equal amounts of gross unrelated business income and total deductions. NOTE: Detail may not add to totals because of rounding.

Table 4.--Returns with Positive Net Income (Taxable Profit): Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Taxable Profit), and Total Income Tax, by Size of Gross UBI, Tax Year 1995

[All figures are estimates based on samples--money amounts are in thousands of dollars]

\$5,000,000 or more	57	1,693,531	57	1,246,997	57	446,535	57	149,471

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For exempt organizations reporting net income (taxable profit), cost of sales and services was \$675.1 million.

NOTE: Detail may not add to totals because of rounding.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," the environmental tax, and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting positive net income, total proxy tax was \$2.2 million.

⁴ The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

Table 5.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Primary Unrelated Business Activity or Industrial Grouping, Tax Year 1995

NOTE: Detail may not add to totals because of rounding.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ For definitions of the sources of gross unrelated business income, see the Explanation of Selected Terms section of this article.

² The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

³ All organizations were required to report each income item, as shown in columns 3 through 26. However, only organizations with gross UBI over \$10,000 were required to report each deduction shown in columns 14 through 45, 48, 49, and 54 through 59 of Table 7. A total of gross UBI is shown separately for these larger organizations in order to facilitate comparison with Table 7.

⁴ Property other than capital assets generally included property of a business nature, in contrast to personal and investment property, which were capital assets.

⁵ Income from real property and personal property leased with real property.

⁶ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁷ Annuities, interest, rents, and royalties.

 $^{^{\}star}$ Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

\$ \$ \$ \$

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.7 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 14 through 49 and 52 through 59.

⁴ Excludes \$36.8 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1 for explanation.

Excludes \$1.7 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1 for explanation.

⁶ This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation."

Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

Unrelated Business Income of Nonprofit Organizations, 1996

by Margaret Riley

axable profits from "unrelated business" activities, reported for Tax Year 1996 by organizations that were otherwise exempt from Federal income taxation, rose 31 percent between 1995 and 1996 and totaled \$1.2 billion. The total unrelated business income tax (UBIT) imposed on these profits was \$372.3 million, a 35-percent increase over 1995. These increases followed even larger percentage increases from 1994 to 1995, resulting in an 82-percent increase in total taxable profits and a 94-percent increase in aggregate unrelated business income tax liability for the 2-year period from 1994 to 1996. Figure A presents information on these and other selected financial data items for Tax Years 1994, 1995, and 1996.

For 1996, an estimated 40,621 tax-exempt organizations filed an "unrelated business" income tax return (Form 990-T) [1]. After making adjustments to UBIT for other taxes and certain credits, the resulting total Federal income tax liability reported on Form 990-T was \$372.6 million. In addition to the \$372.3 million of UBIT, total income tax took into account \$1.8 million of "proxy tax" on certain lobbying and political expenditures, \$0.9 million of other taxes, and \$2.4 million of applied tax credits [2]. (For more information on the proxy tax, see the section, "Proxy Tax on Lobbying and Political Expenditures," below.)

Background

Nonprofit organizations that are granted Federal tax exemption based on their mission-related purposes are allowed, within certain limits, to generate income from unrelated business activities; however, the income from these activities is subject to taxation. In general, income produced from activities that are "regularly carried on" and "are not substantially related" to an organization's tax-exempt purpose is taxable. There are certain exclusions to this income taxation; some examples are engaging in business activities in which substantially all of the work is performed by volunteer labor; selling merchandise that the organization received as a gift or contribution; and operating certain games of chance, as

Margaret Riley is a statistician with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief.

'Includes returns with deficits and "breakeven" returns with equal amounts of gross unrelated business income and total deductions.

NOTE: Detail may not add to totals because of rounding. See the Explanation of Selected Terms section of this article for definitions of gross unrelated business income, total deductions, net income (less deficit), unrelated business income tax, and total income tax.

specified in the Internal Revenue Code.

While specific taxpayer information reported on an exempt organization's Form 990 "information return" can be disclosed to the public, specific taxpayer information reported on its Form 990-T "tax return" cannot. Under disclosure rules governing the release of taxpayer information, only aggregate totals from Form 990-T can be presented in this article.

Income and Deductions

The \$7.3 billion of gross unrelated business income (UBI) reported for 1996 represented a 16-percent increase over 1995. After organizations made deductions totaling \$8.1 billion, the resulting overall net income (less deficit) was -\$0.8 billion. Positive net income, or taxable profit, was reported on 48

Unrelated Business Income of Nonprofit Organizations, 1996

percent of the returns filed; deficits or zero taxable income (equal amounts of gross UBI and total deductions) were reported on the remainder. Of the returns with taxable profit, 65 percent were taxexempt corporations, and 35 percent were taxexempt trusts.

The three fastest growing components of aggregate gross UBI for 1996 were income (less loss) from partnerships (up 99 percent from 1995), investment income (less loss) of section 501(c)(7), (9), and (17) organizations (up 67 percent from 1995), and capital gain net income (up 67 percent from 1995). Even though these items experienced the largest percentage increases between 1995 and 1996, together, they accounted for only 20 percent of total gross UBI. Nearly half of all gross UBI was generated from gross profit (less loss) from sales and services, and another 15 percent was attributable to advertising income, but these two largest components, combined, rose a comparatively small 16 percent between the 2 years.

For 1995 and 1996, annual percentage increases were significantly higher for taxable income and unrelated business income tax liability than they were for total gross UBI and total deductions. The 14-percent increase in the number of organizations filing

Forms 990-T from 1994 to 1996 may account for part of the dollar increases in the major financial data items reported. However, other factors also played a role, especially in the rapid growth of taxable income and UBIT. The following two sections attempt to answer questions about why unrelated business income tax liability rose rapidly during the 1994-96 period and which organizations accounted for the largest share of the tax.

Unrelated Business Income Tax Liability

Figure B underscores the differences in the amounts of UBIT reported by tax-exempt corporations and tax-exempt trusts between 1994 and 1996 [3]. The number of trusts and corporations reporting taxable profit increased at about the same rate from 1994 to 1996, 6 percent and 5 percent, respectively. During the same period, however, the aggregate UBIT liability of trusts rose 138 percent, compared to a 47-percent increase for corporations.

Virtually all of the trusts reporting gross UBIT liability for 1996 were Code section 401(a) pension funds, section 408(e) Individual Retirement Arrangements, and section 501(c)(9) employee benefit associations. About 80 percent of the corporate entities reporting UBIT liability were nonprofit charitable

Unrelated Business Income of Nonprofit Organizations, 1996

organizations tax-exempt under Code section 501(c)(3), business leagues, chambers of commerce, and real estate boards exempt under section 501(c)(6), and social and recreational clubs exempt under section 501(c)(7) [4]. (The various types of tax-exempt organizations are described, by Code section, in the Appendix to this article.)

The large increases in profits and unrelated business income tax liability for 1995 and 1996 can be explained by examining the relationship between each type of organization's main sources of income and stock market performance, and between tax rates and taxable income levels. One factor contributing to the differences in trust and corporate UBIT liability was the effect of favorable stock market conditions, which resulted in substantial increases in profits, especially for trusts, for Tax Years 1995 and 1996.

As shown in Figure C, trusts traditionally report three primary sources of income on Form 990-T: capital gain net income, partnership income, and other

investment income, all of which are directly affected by the stock market. Corporate nonprofit entities, on the other hand, traditionally report gross profit from sales and services and advertising income as their primary income sources, neither of which is directly affected by stock market fluctuations.

It appears that the high investment returns associated with 1995 and 1996 had a greater impact on tax-exempt trusts, which relied heavily on passive investment activities to generate income. In contrast, corporate entities, on the whole, generated income from more active involvement in business enterprises. Another important factor is that trusts, by the nature of their operations, are more limited than most corporations in the types and amount of deductions they can claim to offset income. As a result, they report relatively higher amounts of taxable profit [5]. The average deduction reported by nonprofit trusts was about \$60,000, compared to an average deduction of \$248,000 for nonprofit corporations.

UBIT liability, returns with taxable profit of less than \$1 million

UBIT liability, returns with taxable profit of \$1 million or more

Corporate and Trust Unrelated Business Income Tax Shares

Figure D further compares trusts and corporations, in numbers of returns filed and the amounts of UBIT reported for Tax Year 1996. The first pie in this figure shows that about one-third of the returns with UBIT liability were filed by tax-exempt trusts, with the remaining two-thirds filed by tax-exempt corporations. The pie to its right shows almost the reverse when looking at the split of tax liability. Even though the trusts comprised only one-third of all filers with UBIT liability, they were responsible for nearly two-thirds of the total amount of UBIT reported.

The remaining two pies show that when taxes are distributed by size of taxable profit, distinctly different patterns result for trusts and corporations. In the group of organizations that had taxable profit

of less than \$1 million, two-thirds of total UBIT was reported by corporate entities. In contrast, in the group of organizations that had taxable profit of \$1 million or more, three-quarters of total UBIT was attributable to tax-exempt trusts. In general, a comparison of statutory marginal rates of tax shows that trust income amounts above \$1 million are taxed at higher rates than corporate income amounts above \$1 million. (Corporation and trust income brackets and related tax rates for Tax Year 1996 are included in the definition of Unrelated Business Income Tax in the Explanation of Selected Terms section of this article.)

Within the group of tax-exempt organizations reporting taxable profits of \$1 million or more for 1996, trusts outnumbered corporations by nearly two to one, and their average taxable profit was one-and-

a-half times larger than the average taxable profit of corporate entities. Differences in sources of trust and corporate income and the effect of very favorable returns on investments, which largely benefited nonprofit trusts for 1995 and 1996, greatly account for this outcome. These differences, in combination with the higher tax rate generally applied to trusts in this taxable income group, explain why trusts were liable for a much larger share of the overall unrelated business income tax burden for both 1995 and 1996.

Proxy Tax on Lobbying and Political Expenditures

The proxy tax, which was effective beginning with Tax Year 1994, is imposed on certain nondeductible lobbying and political expenditures of nonprofit organizations. This tax is required to be reported on Form 990-T, even though there is no relationship between the proxy tax and the taxation of unrelated business activities. Specifically, nondeductible lobbying and political expenditures are taxed when they are financed with dues collected from organization members, and the organization either fails to notify the members of their shares of dues that were spent on lobbying and political activities, or the organization fails to state the full amount of allocable dues in the notification.

The amount of proxy tax reported on returns included in Statistics of Income (SOI) studies decreased by 59 percent between 1994 and 1996, and the number of filers reporting the proxy tax dropped by 40 percent during the same period. It is likely that organizations became more familiar with the new proxy tax legislation over time and, therefore, improved their compliance with the member notification requirement.

Organizations that had no unrelated business income (UBI), yet were required to file Form 990-T to report the proxy tax, were not included in the SOI study samples because they did not meet the \$1,000 gross UBI filing threshold, which was a criterion for sample selection [6]. After taking into account the additional Forms 990-T filed solely to report the proxy tax, the total amount of proxy tax reported for 1996 was \$10.8 million. (For a more detailed discussion, see the proxy tax definition in the Explanation of Selected Terms section of this article.)

Summary

Nonprofit organizations, normally exempt from Federal income taxation, reported \$1.2 billion of taxable profits from "unrelated business" activities for Tax Year 1996, a 31-percent increase over 1995. The total unrelated business income tax (UBIT) liability of these organizations rose 35 percent between 1995 and 1996 and amounted to \$372.3 million. After making adjustments to UBIT for other taxes and certain credits, the amount of total income tax liability for 1996 was \$372.6 million.

An estimated 40,621 organizations reported \$7.3 billion of aggregate gross unrelated business income for 1996. After taking deductions totaling \$8.1 billion, the resulting overall loss was \$0.8 billion. Forty-eight percent of the organizations reported taxable profit; the remainder reported zero taxable income or a deficit. Sixty-five percent of the organizations filing returns with taxable profit were tax-exempt corporations, and 35 percent were tax-exempt trusts.

The large increase in total UBIT liability between 1995 and 1996 was principally due to the effect of favorable stock market conditions during that period, which resulted in substantial increases in profits, especially for tax-exempt trusts. The high investment returns associated with these 2 years appear to have had a greater impact on the profits of exempt trusts, compared to the profits of exempt corporations, because the trusts traditionally rely heavily on income from passive investment activities. In contrast, most exempt corporations generate unrelated business income from more active involvement in business enterprises. While the number of trust and corporate tax-exempt entities grew at about the same rate between 1994 and 1996, between 5 and 6 percent, the total UBIT liability of trusts rose 138 percent during that time, compared to a 47-percent increase for corporations.

Data Sources and Limitations

The statistics in this article are based on a sample of Tax Year 1996 Forms 990-T, *Exempt Organization Business Income Tax Return*. The Internal Revenue Service required organizations having accounting periods beginning in 1996 (and, therefore, ending between December 1996 and November 1997) to file a 1996 Form 990-T. The associated

required filing period for Tax Year 1996 Forms 990-T was generally May 1997 to April 1998 (April 1997 to March 1998 for Internal Revenue Code section 401(a) and 408(e) trusts), but extensions of time to file beyond this period were granted to many organizations. Because the accounting periods of the organizations filing a 1996 return vary, the financial activities covered in this article span the period January 1996 through November 1997 (although the majority of activities occurred during Calendar Year 1996).

The population from which the 1996 Form 990-T sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1997 and 1998. The returns in the sample were stratified based on the size of gross unrelated business income (UBI). A sample of 6,760 returns was selected from a population of 40,793. After excluding returns that were selected for the sample but later rejected, the sample size was 6,721, and the estimated population size was 40,621. Rejected returns included those which had gross UBI below the \$1,000 filing threshold, were filed only to claim a refund, or were filed for a part-year accounting period that began in a year other than 1996. (For example, a final return filed for the short period of January 1997-June 1997 may have been computerselected for the 1996 sample based on the criterion of having an ending accounting period that fit into the December 1996 to November 1997 range for a Tax Year 1996 return, but it would be rejected because, in actuality, it was a Tax Year 1997 return.)

The 1996 Form 990-T study design incorporated a special "integrated" sample to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations that filed both Form 990 (*Return of Organization Exempt From Income Tax*) and Form 990-T. Under this program, the Form 990-T sample included unrelated business income tax returns filed by any organizations whose Form 990 information returns were selected for the Statistics of Income sample of nonprofit charitable organizations tax-exempt under section 501(c)(3).

Returns selected for the Form 990 sample were a determining factor in the selection of returns that were included in the integrated portion of the Form 990-T sample. The Form 990-T sample was designed so that if a return was not initially selected,

based on independent Form 990-T sampling criteria, it was subjected to further sampling based on a Forms 990/990-T matching process. Under this process, the Employer Identification Numbers (EIN's) of Form 990-T returns that were not initially selected for the Form 990-T sample were compared to the EIN's of returns selected for the Form 990 SOI sample. When a match occurred, the Form 990-T was added to the independently selected Form 990-T sample. These specially matched returns, along with the independently selected Forms 990-T that also had counterparts in the Form 990 sample, formed the "integrated" portion of the Form 990-T sample [7].

Sampling rates ranged from a minimum of 2.6 percent (Form 990-T gross UBI was less than \$20,000, with either no Form 990 match or a Form 990 match to a section code 501(c)(3) return with assets under \$2,500,000) to a maximum of 100 percent (either Form 990-T gross UBI was \$300,000 or more, or Form 990-T had any amount of gross UBI and matched to a section 501(c)(3) Form 990 with assets of \$10,000,000 or more). Other Forms 990/990-T matches within various ranges of gross UBI, assets, and Internal Revenue Code sections were selected at rates ranging from 5 percent to 25 percent.

The information presented in this article was obtained from returns as originally filed with the IRS. The data were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure E shows CV's for selected financial data. CV's are not shown for returns with gross UBI of \$500,000 or more because they were sampled at a 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix, located near the back of this issue of the *SOI Bulletin*.

Figure E

Coefficients of Variation for Selected Items, Tax Year 1996

	Gross		Net					
	unrelated	Total	income	Total				
Size of gross unrelated	business	deductions	(taxable	income				
business income	income		profit)	tax				
	Coefficient of variation (percentages)							
	(1)	(2)	(3)	(4)				
Total	1.36	1.34	1.22	1.24				
\$1,000 under \$10,001 ¹	3.47	9.36	7.53	8.53				
\$10,001 under \$100,000 1	1.67	3.92	5.76	6.98				
\$100,000 under \$500,000	1.41	2.88	3.73	4.64				
\$500,000 or more	N/A	N/A	N/A	N/A				

¹The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

N/A - Not applicable.

Explanation of Selected Terms

Advertising Income.—Gross income realized by an exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.—Generally, organizations required to file Form 990-T (except organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17)) were not taxed on the net gains from the sale, exchange, or other disposition of property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245,

1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), and (17) organizations.)

Contributions.—To the extent permissible under the Internal Revenue Code, a deduction was allowed for contributions or gifts actually paid within the tax year to, or for the use of, another entity that was a charitable or governmental organization described in Code section 170(c). Any unused contributions carried over from earlier years were also allowed. The contributions deduction was allowed whether or not directly connected with the carrying on of a trade or business.

Deductions Directly Connected With Unrelated Business Income.—These were deductions allowed in computing net income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to carrying on an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-financed income; those directly connected with investment income of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; those allocable to interest, annuities, royalties, and rents received from controlled organizations; those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss carryover"; and "other deductions." Exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly-connected expenses listed above (those described as "allocable to") and a single total for all other types of deductions (both deductions directly connected with UBI and those not directly connected, each defined below), except for two items that were required to be reported separately: the "net operating loss carryover" and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported, when applicable, by all organizations with positive taxable income; the other types of deductions not directly connected with UBI were reported separately, when applicable, only by exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.—The two types of "excess" expenses allowed as deductions from unrelated business income were (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.—In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an

excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.—This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax return schedules. For example, an Internal Revenue Code section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required return schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI).— This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other income" (less

loss). (For an explanation of how income is allocated to the components of gross UBI, see the separate listings for each component.)

Income from Controlled Organizations.— When an exempt organization controls another organization (as described below), the gross annuities, interest, rents, and royalties from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is tax-exempt or not. For Tax Year 1995 "control" meant: (a) for a stock corporation, the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and ownership of at least 80 percent of the total number of shares of all other classes of stock of the corporation; or (b) for a nonstock organization, at least 80 percent of the directors or trustees of the organization were either representatives of, or directly or indirectly controlled by, a tax-exempt organization. The rules for debt-financed property did not apply to passive income from controlled organizations. (See the explanation of Unrelated Debt-financed Income.)

Income (Less Loss) from Partnerships.—If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).— This item was reported only by organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17) and included such income as gross unrelated debt-financed income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), and (17) organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), and (17) did not report "investment income (less loss)." Generally, these organizations' investment income (dividends, interest, rents, and annuities) and royalty income were not

taxed as unrelated business income, unless it was income from a controlled organization (excluding dividends) or debt-financed income, or the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled Organizations, Rental Income, and Unrelated Debt-financed Income.)

Net Capital Loss (Trusts Only).—If a trust had a net loss from sales or exchanges of capital assets, it was allowed a deduction for the amount of the net loss or \$3,000, whichever was lower. (Corporations were not allowed to deduct any excesses of capital losses over capital gains.) Trusts reported the net capital loss deduction on Form 990-T as a negative component of gross unrelated business income. Most of the trusts filing Form 990-T were Individual Retirement Arrangements (IRA's); employee pension, profit-sharing, or stock bonus plans; and employees' beneficiary associations providing for payment of life, sickness, health, or other benefits to members.

Net Gain (Less Loss), Sales of Noncapital Assets.—This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties, which were capital assets.

Net Income (Less Deficit).—This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. On a return-by-return basis, the result of this computation was either positive (net income), negative (deficit), or zero. Net income represented taxable profit, which was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Net Operating Loss Carryover.—The net operating loss carryover (as described in Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of

exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for specified prior or future years for which an organization reported an overall deficit from its unrelated trade or business activities. The statistics in this article represent only the net operating loss carryover because carrybacks from future years would be reported on an amended return, not on the return as initially filed, which served as the basis for the statistics.

Other Deductions.—This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for accounting, legal, consulting, or financial management services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).—This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefits fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Proxy Tax.—This was a tax on certain nondeductible lobbying and political expenditures paid or incurred after December 31, 1993, by organizations that were tax-exempt under Internal Revenue Code sections 501(c)(4), 501(c)(5), and 501(c)(6). If the organization failed to notify its members regarding their shares of dues to which nondeductible lobbying and political expenditures were allocable, or if the notice did not include the entire amount of dues that were allocable, then the proxy tax was imposed on the organization. It was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to the organization's members, multiplied by 35 percent. The proxy tax was required to be reported on Form 990-T and was included in total income tax; however, there was no connection between the proxy tax and

the taxation of income from an organization's unrelated business activities. For this reason, and because the SOI sample did not include returns with gross unrelated business income (UBI) below the \$1,000 filing threshold, Forms 990-T filed solely to report the proxy tax (no UBI reported) were excluded from the SOI sample. Organizations whose returns were included in the SOI sample reported an aggregate \$1.8 million of proxy tax. Based on an unpublished tabulation of data from the IRS Business Returns Transaction File, a total of \$10.8 million of proxy tax was reported on 612 Forms 990-T for Tax Year 1996. It is estimated that about 65 percent of these 612 returns were filed solely to report the proxy tax and, thus, were excluded from the SOI sample.

Rental Income.—For organizations tax exempt under Internal Revenue Code sections other than 501(c)(7), (9), and (17), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent, of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property were generally excluded in computing unrelated business taxable income. In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax-exempt under sections 501(c)(7), (9), and (17), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.—These amounts were allowed to social clubs (Internal Revenue Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), and supplemental unemployment benefit trusts (section 501(c)(17)) as a deduction from investment income. The deduction was

equal to the amount of passive income (generally, investment income) that these organizations set aside (1) to be used for charitable purposes or (2) to provide payment of life, health, accident, or other insurance benefits (section 501(c)(9) and (17) organizations only). However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income; they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.—The specific deduction was generally a \$1,000 deduction, considered "not directly connected" with gross unrelated business income, allowed to all organizations that had positive taxable income after all other types of deductions were taken. The specific deduction was \$1,000 or the amount of positive taxable income, whichever was less. This deduction was allowed to all tax return filers to provide the equivalent benefit of the \$1,000 gross unrelated business income filing threshold under which some organizations were exempted from filing a return and paying the unrelated business income tax.

Total Deductions.—Total Deductions included both deductions reported on the main part of Form 990-T and expense items reported on attached schedules. It excluded cost of sales and services (\$1.9 billion for 1996), which was subtracted from gross receipts from sales and services in computing gross profit (less loss) from sales and services. Gross profit (less loss) from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services was reported on Form 990-T as a lump-sum total, but may have included amounts attributable to depreciation, salaries and wages, and certain other types of deductible items. For this reason, the total amount shown for some of the separately reported components of total deductions, such as "salaries and wages," may be understated

Total Income Tax.—Total income tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the

"proxy tax" on certain lobbying expenditures, the tax from recomputing certain prior-year credits ("recapture taxes"), and the "alternative minimum tax." Prior to Tax Year 1996, some nonprofit organizations were liable for the "environmental tax," an excise tax levied on certain corporations, computed based on their "modified alternative minimum tax." The environmental tax expired on December 31, 1995.

Unrelated Business Income.—This was income of a tax-exempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.—This was the tax imposed on unrelated business net income (taxable profit). It was determined based on the regular corporate or trust income tax rates that were in effect for the 1996 Tax Year, as shown in the following schedules.

Tax Rates for Corporations
(Section 11 of the Internal Revenue Code)

Amount of unrelated business taxable income is:

			Of the
	But not		amount
Over—	over-	Tax is:	over-
\$0	\$50,000	15%	\$0
50,000	75,000	\$7,500+25%	50,000
75,000	100,000	13,750+34%	75,000
100,000	335,000	22,250+39%	100,000
335,000	10,000,000	113,900+34%	335,000
10,000,000	15,000,000	3,400,000+35%	10,000,000

But not over—	Tax is:	Of the amount over—
\$1,600	15%	\$0
3,800	\$232.50+28%	1,600
5,800	834.50+31%	3,800
7,900	1,423.50+36%	5,800
- 2	2,161.50+39.6%	7,900
	\$1,600 3,800 5,800 7,900	over— Tax is: \$1,600 15% 3,800 \$232.50+28% 5,800 834.50+31%

Unrelated Debt-financed Income.—Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debtfinanced income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debtfinanced property, and the gain was treated as unrelated debt-financed income. Income from debtfinanced property did not include rents from personal property (e.g., computers or furniture) leased with real property, certain passive income from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported all debt-financed income as "Investment Income (Less Loss)." All other organizations reported debt-financed income separately.

Notes and References

[1] Organizations that are recognized as tax exempt under section 501(a) of the Internal Revenue

Code, and described in Code sections 401(a), 408(e), and 501(c), must file a Federal income tax return (Form 990-T, Exempt Organization Business Income Tax Return) if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax-exempt status. Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and nonexempt charitable trusts treated as exempt organizations file tax forms other than Form 990-T. Returns filed by organizations with gross unrelated business income (UBI) below the \$1,000 filing requirement threshold were excluded from the statistics presented in this article. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding that was withheld erroneously on interest or dividend payments because the payer did not realize that the payee was a tax-exempt organization.

Most organizations that file Form 990-T to report taxes must also file information returns on Form 990, Return of Organization Exempt From Income Tax, or Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation. For the most recent Form 990 annual data on organizations tax-exempt under Internal Revenue Code sections 501(c)(3) (excluding private foundations and most religious organizations), see Arnsberger, Paul, "Nonprofit Charitable Organizations, 1996," Statistics of Income Bulletin, Winter 1999-2000, Volume 19, Number 3, pp. 107-113. For the most recent annual data on private foundations, see Whitten, Melissa, "Private Foundations and Charitable Trusts, 1996," Statistics of Income Bulletin, Fall 1999, Volume 19, Number 2, pp. 103-142.

[2] In addition to the proxy tax, taxes other than UBIT included "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits) and the "alternative minimum tax" (AMT). Credits included the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconven-

- tional source fuel credit, and qualified electric vehicle credit).
- [3] The unrelated business income tax (UBIT) for nonprofit corporations was determined based on the regular corporate income tax rates in effect for Tax Year 1996. Nonprofit trusts were generally taxed at the regular individual income tax rates established for estates and trusts for Tax Year 1996. Trusts that were eligible for the maximum 28-percent tax rate on capital gain net income figured their tax based on Schedule D of Form 1041, U.S. Income Tax Return for Estates and Trusts. The corporate and trust tax-rate schedules are included in the definition of Unrelated Business Income Tax, found in the Explanation of Selected Terms section of this article.
- [4] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary, or religious in nature, and also those organizations engaged in

- activities which foster national or international amateur sports competition, prevent cruelty to children or animals, or test for public safety.
- [5] For example, the investment portfolios of nonprofit trusts are usually overseen by only one or two trust managers, so deductions for salaries and wages, a significant deduction item for many corporate nonprofit entities, are relatively small, resulting in higher taxable income.
- [6] The \$1,000 gross UBI filing threshold is discussed in footnote 1.
- [7] For additional information on the Form 990 and Form 990-T integrated sample design, see Harte, James M. and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Turning Administrative Systems Into Information Systems, 1993.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
401(a)	Qualified pension, profit-sharing, or stock bonus plans	Fiduciary agent for pension, profit-sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements	Fiduciary agent for retirement funds
501(c)(2)	Title-holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, health, accident, or other benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, health, accident, or other benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, health, or accident benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities
(14)	State-chartered credit unions and mutual reserve funds	Providing loans to members

Appendix

Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee-funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(21)	Black lung benefit trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multi-employer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title-holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit-sharing, or stock bonus plans; or governmental units

NOTE: Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt effective with tax years beginning after June 30, 1992.

Table 1.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Internal Revenue Code Section Describing Type of Tax-Exempt Organization, Tax Year 1996

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.9 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

[&]quot;Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$1.8 million.

⁵ Prepaid legal service funds, previously described in section 501(c)(20) of the Internal Revenue Code, were no longer tax exempt beginning with tax years after June 30, 1992. Therefore, these organizations are not listed in this table.

NOTES: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

Table 2.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Size of Gross UBI, Tax Year 1996

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Size of gross unrelated	Number of	mber unrelated deductions		10		ncome deficit)	Deficit	-	ital ne tax ⁴
business income (UBI)	returns	income (UBI)	Number of returns	Amount	Number of returns ³	Amount		Number of returns	Amount

\$500,000 under \$1,000,000	898	623,789	895	774,902	791	-151,113	222,076	378	22,084
\$1,000,000 under \$5,000,000	783	1,547,136	782	1,870,778	697	-323,642	520,601	312	67,193
\$5,000,000 or more	171	3,364,835	171	2,972,590	157	392,246	263,107	69	224,183

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.9 billion.

The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

NOTE: Detail may not add to totals because of rounding.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Excludes returns with net income (less deficit) equal to zero.

[&]quot;Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures.

The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$1.8 million.

\$5,000,000 or more	27	678,349	27	193,328	485,021	27	165,160

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For exempt organizations reporting net income (taxable profit), cost of sales and services was \$682.3 million, all of which was attributable to tax-exempt corporations.

NOTE: Detail may not add to totals because of rounding

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting positive net income, total proxy tax was \$0.4 million, all of which was attributable to tax-exempt corporations.

⁴ The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

Table 5.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Deficit, and Total Income Tax, by Primary Unrelated Business Activity or Industrial Grouping, Tax Year 1996

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Not allocable	386	40,225	385	32,243	384	7,982	13,530	156	7,612

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.9 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules

 $[\]ensuremath{^{3}}$ Excludes returns with net income (less deficit) equal to zero.

⁴ Total income tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total income tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$1.8 million.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ For definitions of the sources of gross unrelated business income, see the Explanation of Selected Terms section of this article.

² The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

³ All organizations were required to report each income item, as shown in columns 3 through 26. However, only organizations with gross UBI over \$10,000 were required to report each deduction shown in columns 14 through 45, 48, 49, and 54 through 59 of Table 7. Totals for these larger organizations with gross UBI over \$10,000 are shown in order to facilitate comparison with Table 7.

⁴ Property other than capital assets generally included property of a business nature, in contrast to personal and investment property, which were capital assets.

 $^{^{\ 5}}$ Income from real property and personal property leased with real property.

⁶ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁷ Annuities, interest, rents, and royalties.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$1.9 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on attached schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 14 through 45, 48, 49, and 54 through 59.

⁴ Excludes \$50.2 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1 for explanation.

⁵ Excludes \$1.8 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1 for explanation.

This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only. NOTE: Detail may not add to totals because of rounding.

by Margaret Riley

axable profits from "unrelated business income" reported by 39,302 nonprofit organizations on Forms 990-T, Exempt Organization Business Income Tax Returns, rose 18 percent between Tax Years 1996 and 1997, amounting to \$1.4 billion for 1997. However, this percentage increase was much smaller than that reported for each of the 2 previous years, 31 percent for 1996 and 39 percent for 1995.

Nonprofits collectively reported unrelated business deficits for 1997 that were larger than positive taxable income, resulting in an overall loss for the year. After applying \$8.5 billion of total deductions against \$7.8 billion of gross unrelated business income (UBI), the overall net income (less deficit) for 1997 was \$-0.7 billion. The \$2.1 billion of aggregate deficits reported for 1997 was one-and-a-half times larger than aggregate taxable profits. The unrelated business income tax (UBIT) liability imposed on taxable profits was \$418.4 million, an increase of 12 percent over 1996. Figure A presents information on these and other selected financial data items for Tax Years 1996 and 1997.

The number of returns filed between 1996 and 1997 declined by 3 percent. As shown in Figure A, the smaller organizations, those with gross UBI of \$10,000 or less, were primarily responsible for this drop. Together, these organizations filed 14 percent fewer returns between 1996 and 1997, while the number of returns filed by larger organizations, those with gross UBI over \$10,000, increased by 7 percent.

Background

Nonprofit organizations that are granted Federal tax exemption based on their mission-related purposes are allowed, within certain limits, to generate income from unrelated business activities; however, the income from these activities is subject to taxation. In general, income produced from activities that are "regularly carried on" and "are not substantially related" to an organization's tax-exempt purpose are taxable. There are certain exclusions to this income taxation; some examples are engaging in business activities in which substantially all of the work is

performed by volunteer labor; selling merchandise that the organization received as a gift or contribution; and operating certain games of chance, as specified in the Internal Revenue Code.

Most tax-exempt organizations are required to file an annual Form 990, *Return of Organization Exempt From Income Tax*, or Form 990-EZ, *Short Form Return of Organization Exempt From Income Tax* (used by organizations with annual gross receipts of less than \$100,000 and total end-of-year assets of less than \$250,000) [1]. The Form 990-T is required only for a tax year in which an organization has unrelated business income. While specific tax-

¹ Organizations with gross unrelated business income between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately).

NOTES: Detail may not add to totals because of rounding. See the Explanation of Selected Terms section of this article for definitions of gross unrelated business income, total deductions, net income (less deficit), unrelated business income tax, and total tax.

Margaret Riley is a statistician with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief.

² Includes returns with deficits and "breakeven" returns with equal amounts of gross unrelated business income and total deductions.

³ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services (GPSS). GPSS is a component of gross unrelated business income (upon which the filing requirement is based). Total cost of sales and services was \$2.0 billion

payer information reported on an exempt organization's Form 990/990-EZ "information return" can be disclosed to the public, specific taxpayer information reported on its Form 990-T "tax return" cannot. Under disclosure rules governing the release of taxpayer information, only aggregate totals from Form 990-T can be presented in this article.

Organizations that are recognized as tax-exempt under section 501(a) of the Internal Revenue Code, and described in Code sections 220(e), 401(a), 408(e), and 501(c), must file a Form 990-T if they received \$1,000 or more of gross income from business activities that were considered unrelated to the purposes for which they received tax-exempt status. (The various types of tax-exempt organizations subject to the unrelated business income tax provisions are described by Code section in the Appendix to this article.) Code section 501(d) religious and apostolic organizations, farmers' cooperatives, and section 4941(a)(1) "nonexempt charitable trusts" report taxes on forms other than Form 990-T.

Any returns filed by organizations with gross unrelated business income (UBI) below the \$1,000 filing requirement threshold were excluded from the statistics presented in this article. Some of these returns were filed inadvertently; others were filed for a specific reason, such as to claim a refund of Form 1099 backup withholding of tax that was withheld erroneously on interest or dividend payments because the payer did not realize that the payee was a taxexempt organization. Organizations with gross UBI between \$1,000 and \$10,000 were required to report only totals for expenses and deductions (except for the "specific deduction" and "net operating loss carryover," which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report more detailed expenses and deductions

Statistical Snapshots

Form 990-T Filers

The 3-percent decline in Form 990-T filings for 1997 was not attributable to all organizations. An attempt to profile the group of organizations that filed fewer returns revealed two main characteristics: most reported \$10,000 or less of gross UBI; and the largest drop in filers, by type of organization, was for Individual Retirement Arrangement (IRA) trusts,

exempt from tax under Internal Revenue Code section 408(e).

The number of Form 990-T returns filed by section 408(e) IRA trusts decreased 28 percent between 1996 and 1997, dropping from 8,466 to 6,085. (See Table 1 at the end of this article

There is no one reason for the drop in Forms 990-T filed, but there may be a connection to Individual Retirement Arrangement trusts' involvement in partnerships.

for major financial items, distributed by Code section describing the various types of nonprofit organizations filing Form 990-T). Organizations exempt under sections 401(a), 501(c)(6), 501(c)(9), and 501(c)(14)also filed fewer returns for 1997, but both the drop in number of returns filed and the percentage decreases were not nearly as large for these groups as for the IRA trusts. Respectively, these latter four Code-section groups of organizations were pension, profit-sharing, and stock bonus plans; business leagues, chambers of commerce, and real estate boards; voluntary employees' beneficiary associations (VEBA's); and State-chartered credit unions, and mutual organizations providing insurance or reserve funds for certain banks or loan associations, respectively.

There is no one reason for the drop in returns filed, but there may be a connection to section 408(e) IRA trusts' involvement in partnerships. IRA trusts with gross UBI of \$10,000 or less reported an overall decrease of 38 percent in income (less loss) received from partnerships between Tax Years 1996 and 1997. This coincided with a 30-percent drop in the number of returns filed by organizations in this group. Partnership income (less loss) reported for 1997 by IRA trusts with gross UBI of more than \$10,000 dropped 91 percent, but these organizations filed only 4 percent fewer returns from 1996 to 1997. IRA trusts that reported \$10,000 or less of gross UBI made up 92 percent of all IRA trusts filing Forms 990-T for 1997; for 1996, the proportion was 94 percent.

Given the large share of the IRA trust population in the smaller-size-organization group, the \$1,000 gross UBI threshold for filing a Form 990-T, and the fact that partnership income (less loss) traditionally is the principal source of income (86 percent for 1997)

for IRA trusts reporting gross UBI of \$10,000 or less, it is reasonable to assume that changes in partnership investment activities experienced by organizations in the smaller gross UBI bracket can be tied to the decline in Forms 990-T filed between 1996 and 1997.

A factor that supports this premise is that about three-quarters of all IRA trusts reported gross UBI of \$3,000 or less for 1996. Relatively small partnership net losses or decreases in partnership income could cause these organizations' gross income to fall below the \$1,000 filing threshold, thus exempting them from filing a Form 990-T for 1997. Using Tax Year 1996 Internal Revenue Service (IRS) "Business Returns Transaction File" data and the 1997 Statistics of Income data, it is estimated that 71 percent of the IRA trusts with gross UBI of \$10,000 or less filed a 1996 return, but did not file a 1997 return [2]. For comparison, only about 19 percent of section 501(c)(3) "charitable" organizations (the largest Code section group in terms of the number of Forms 990-T filed) with gross UBI of \$10,000 or less filed a 1996 return, but not a 1997 return [3].

Sources of Income

As shown in Figure B, the composition of income varies by the income size of organizations filing Form 990-T. (See Table 6 at the end of this article for specific income items required to be reported on Form 990-T). "Large" organizations-- those with gross UBI of \$500,000 or more-- reported 76 percent of their \$6.0 billion of total income under three categories: gross profit (less loss) from sales and services; investment income (less loss) of section 501(c)(7), (9), and (17) organizations; and advertising income. About 5 percent of all Tax Year 1997 Forms 990-T were filed by the large organizations, but they accounted for slightly more than three-quarters of the \$7.8 billion total of gross UBI reported for 1997.

Two primary income sources for "medium"-size organizations-- those with gross UBI of \$10,001 under \$500,000-- accounted for 69 percent of their total income. These sources were gross profit (less loss) from sales and services, and advertising income. The medium-size organizations reported aggregate gross UBI of \$1.8 billion, or 23 percent of the total for 1997, and accounted for 53 percent of all Forms 990-T filed.

Four components were responsible for 78 percent of the \$61.7 million of total income reported by "small" organizations—those with gross UBI of \$10,000 or less. These were gross profit (less loss) from sales and services; income (less loss) from partnerships; advertising income; and investment income (less loss) of section 501(c)(7), (9), and (17) organizations. These organizations filed 42 percent of all Forms 990-T, but represented less than 1 percent of total gross UBI reported by all organizations for 1997

The aggregate investment income (less loss) of the large organizations rose 64 percent from 1996 to 1997, from \$529.2 million to \$865.8 million. However, this investment income was limited to that reported by Code section 501(c)(7), (9), and (17) organizations. Generally, other nonprofit organizations' dividend, interest, rental, and annuity income was not taxed, unless it was from a "controlled organization" or was debt-financed. (See the Explanation of Selected Terms section of this article for definitions of Investment Income (Less Loss), Income from Controlled Organizations, and Unrelated Debt-financed Income.) Large organizations' net profit from sales and services and from advertising income rose only 3 percent and 8 percent, respectively.

Determinants of Annual Deficits

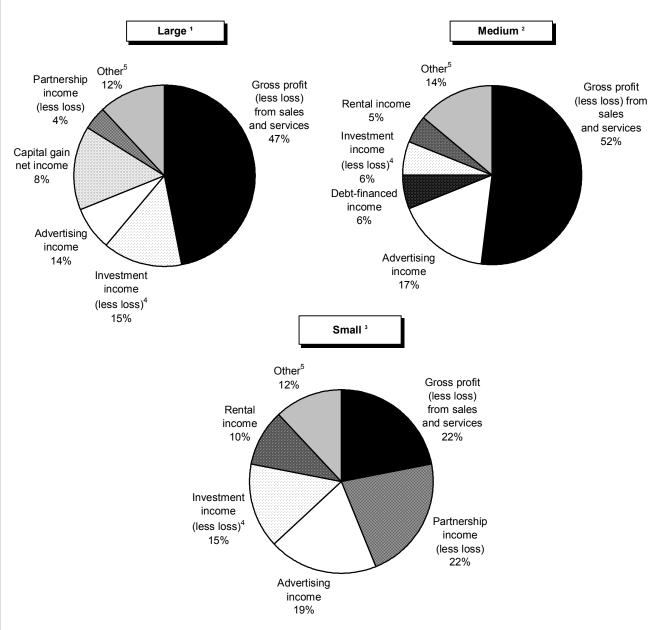

For every year that Statistics of Income data are available from Form 990-T, beginning with Tax Year 1990, nonprofit organizations have reported aggregate net deficits from unrelated business activities. An examination of the various items deducted from income for 1997 by organizations with gross UBI over \$10,000 (smaller organizations report only totals for expenses and deductions, except for the "net

operating carryover" and the "specific deduction") shows that net deficits were tied more closely to certain types of expenses and deductions than others. In the aggregate, expenses that were directly allocable to six specific types of unrelated business

activities.

Figure B

Composition of Gross Unrelated Business Income (UBI), by Size of Organization, Tax Year 1997

¹ Large organizations are those with gross unrelated business income (UBI) of \$500,000 or more.

² Medium organizations are those with gross UBI of \$10,001 under \$500,000.

³ Small organizations are those with gross UBI of \$1,000 under \$10,001. These organizations are required to file only a "partial" return. Organizations with larger amounts of gross UBI are required to file a more detailed, complete return. Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

⁴ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁵ See Table 6 at the end of this article for gross UBI components other than those specifically shown in this figure.

Operational expenses, the "net operating loss carryover," and "deductions not directly connected" with unrelated business income are chiefly responsible for annual unrelated business deficits. income on Form 990-T did not exceed the associated amount of income reported, which resulted in positive net income for each income type. (See Table 7, which shows types of deductions

distributed by size of gross UBI, at the end of this article). The six positive net income sources were rental income, unrelated debt-financed income, investment income (less loss) of section 501(c)(7), (9), and (17) organizations, income from controlled organizations, "exploited exempt activity" income (excluding advertising), and advertising income. (These items are defined in the Explanation of Terms section of this article.) Based solely on these six specific types of income, the larger organizations reported positive net income (taxable profit) of \$1.2 billion

An additional source of income, gross profit (less loss) from sales and services, totaled \$3.7 billion for the larger organizations, those with gross UBI over \$10,000, for 1997. This gross profit (less loss) resulted from subtracting \$2.0 billion of costs of sales and services from \$5.7 billion of gross receipts from sales and services [4]. The aggregate amount of gross profit (less loss) from sales and services, along with the net income (less loss) from the six specifically reported income sources mentioned above, was positive for each of Tax Years 1991 through 1997, except for net losses reported for unrelated debtfinanced activities prior to Tax Year 1995. This seems to indicate that the remaining deduction items reported on Form 990-T, which are mainly operational expenses, the net operating loss carryover, and miscellaneous "deductions not directly connected" to producing unrelated business income (all of which are also shown in Table 7), are chiefly responsible for the annual unrelated business deficits reported by nonprofit organizations.

The operating expenses of "salaries and wages" and "other deductions," plus the net operating loss carryover, plus "deductions not directly connected" accounted for 73 percent of total deductions reported

by the larger organizations on Form 990-T for 1997. (Other Deductions, Net Operating Loss Carryover, and Deductions Not Directly Connected are defined in the Explanation of Terms section.) Using generally acceptable accounting practices, nonprofit organizations are allowed to allocate a certain percentage of operational costs to their unrelated business activities, based on a proportion of unrelated income to total income. This can be done even if no supplemental costs above their existing mission-related costs were incurred to conduct the unrelated activities. An analysis of unrelated business income and deductions continues in the section, "Nonprofit Charitable Organizations Classified by National Taxonomy of Exempt Entities."

Distribution of Total Tax

Virtually all of the total tax reported on Form 990-T each year is the unrelated business income tax (UBIT). In addition to \$418.4 million of UBIT, the \$422.7 million of total tax reported for 1997 took into account \$7.2 million of "proxy tax" on certain lobbying and political expenditures, \$1.0 million of "alternative minimum tax," and \$3.9 million of various tax credits [5].

While the proxy tax was required to be reported on Form 990-T, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities. (See the definition of Proxy Tax in the Explanation of Terms section.) For this reason, and because returns with gross UBI below the \$1,000 filing threshold were not used for the statistics, Forms 990-T filed solely to report the proxy tax (no UBI reported) were excluded from the study. Based on an unpublished tabulation of data from the IRS Business Returns Transaction File, a total of \$13.9 million of proxy tax was reported on 627 Forms 990-T for Tax Year 1997. It is estimated that about 64 percent of these 627 returns were filed solely to report the proxy tax.

Nonprofit organizations filing Form 990-T are organized as trusts or corporations. Trust UBI is taxed at individual (single status) income tax rates, and corporate UBI is taxed at corporate rates. (Tax Year 1997 rates are provided in the definition of Unrelated Business Income Tax, included in the Explanation of Terms section.) Tax-exempt corporations accounted for 64 percent of returns filed with positive net income (taxable profit), and tax-exempt

trusts accounted for the remainder. The proportions are reversed when looking at total tax liability. Exempt trusts were responsible for 63 percent of total tax liability, and exempt corporations were responsible for 37 percent.

The primary reason for these differences is that trusts filing Form 990-T traditionally are mostly Code section 401(a) pension funds, section 408(e) IRA's, and section 501(c)(9) voluntary employee beneficiary associations (VEBA's). By the nature of their operations, these trusts generally are more limited than corporations in the types and amount of deductions they can use to offset their incomes [6]. This results in relatively higher amounts of taxable profit for trusts, compared to corporate entities. For 1997, the average deduction reported by nonprofit trusts was less than half the size of the average deduction reported by nonprofit corporations; the average total tax liability of nonprofit trusts was over three times larger than that of nonprofit corporations.

Together, section 501(c)(9) VEBA's and section 501(c)(3) charitable organizations were responsible for 72 percent of total tax liability reported. Another 23 percent of tax liability was attributable to section 401(a) pension trusts; section 501(c)(6) chambers of commerce, business leagues, and real-estate boards; and section 501(c)(7) social and recreational clubs.

Nonprofit Charitable Organizations Classified by National Taxonomy of Exempt Entities

Figure C presents information on the types of section 501(c)(3) nonprofit charitable organizations, based on the National Taxonomy of Exempt Entities (NTEE), a classification system developed by the National Center for Charitable Statistics, with the collaboration of major nonprofit entities. Organizations included in this table filed both a Form 990 "information" return and a Form 990-T "tax" return. The NTEE system classifies organizations by institutional purpose and major programs and activities [7]. It is comprised of 26 major groups, which are then aggregated into 10 categories. The organizations were coded on the basis of information provided on Form 990.

Forms 990 and 990-T Integrated Sample

The organizations classified by NTEE in Figure C were part of an "integrated" sample to gather information on "related" (tax-exempt) and "unrelated" (taxable) income and expenses for organizations that filed both Form 990 and Form

990-T. This integrated sampling program ensured that the Statistics of Income sample of Forms 990-T included unrelated business income tax returns filed by any organizations whose Form 990 information returns were selected for the sample of section 501(c)(3) nonprofit charitable organizations. Forms 990-T filed by section 501(c)(3) organizations that also filed a "short" Form 990-EZ are excluded from the analysis of the data presented in Figure C [8].

The Form 990-T sample included returns that were initially selected based on independent Form 990-T sampling criteria, and additional returns that were not initially selected but were subsequently matched to returns in the Form 990 sample. These matched returns, along with any independently selected Forms 990-T that also had counterparts in the Form 990 sample, formed the "integrated" portion of the Form 990-T sample [9].

Of the total 8,002 tax returns in the combined Form 990-T sample, there were 3,391 that were filed by organizations whose information returns were also included in the section 501(c)(3) Form 990 sample. About one-third of these Forms 990-T were not selected initially, but became part of the sample because they subsequently matched a selected Form 990. Applying Form 990 sample weights to the 3,391 integrated sample records produced an estimated population of 7,543 joint Forms 990/990-T filers [10]. Data from these organizations' Form 990-T tax returns were combined with data from their Form 990 information returns for the Figure C analysis.

To clarify, this population is estimated based on Form 990 and Form 990-T records in the two samples that were filed by the same section 501(c)(3) charitable organizations; it is not the estimated total population of all charitable organizations filing Forms 990-T. The estimated total number of Forms 990-T filed for Tax Year 1997 by section 501(c)(3) charities is shown in Table 1 at the end of this article. In addition to the exclusion of Form 990-EZ filers, other factors pertaining to Form 990 filing requirements affected the estimated population of organizations shown in Figure C and used for analysis in this section [11, 12]. The matched records provide the means for consistency in analyzing exempt-function and nonexempt-function income of organizations that are involved in unrelated business activities.

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system using 26 major field areas that can be aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The classifications describe the purposes and activities of nonprofit organizations. See Notes and References, footnote 7.

NOTES: Data are from Forms 990 and 990-T filed by nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations. Detail may not add to totals because of rounding.

The 7,543 section 501(c)(3) charitable organizations for which statistics are shown in Figure C represent about 5 percent of the 155,330 population of section 501(c)(3) organizations filing Form 990 for

1997, based on the Form 990 sample (excluding Form 990-EZ). Figure C illustrates, to a large degree, the extent to which the section 501(c)(3) organizations engaged in unrelated business activities. This is

² Excludes most colleges and universities operated by State and local Governments.

³ For derivations, see Figure D.

measured in two ways: by using actual income and expense items reported on the returns (top panel of the table) and by using derived amounts of gross receipts and expenditures (bottom panel of the table). The derived amounts take into account certain adjustments made to income and expense items reported on Forms 990 and 990-T to make them more analogous for comparing total financial activity with unrelated business activity and to include only those components that are considered to be current tax year (1997) gross receipts and associated expenditures. The formulas used to derive Forms 990 and 990-T gross receipts and associated expenditures are shown in Figure D.

Analysis of Income and Expenses by Major NTEE Categories, As Reported on Forms 990 and 990-T

In the top panel of Figure C, total revenue and total expenses reported on Form 990 include both exemptfunction (related) and nonexempt-function (unrelated) income and expenses. These Form 990 totals, in addition to unrelated business gross income (UBGI) and total deductions reported on Form 990-T, are tabulated directly from the amounts required to be reported on the respective returns for tax administration purposes. Therefore, the data shown in the top panel represent a tax concept of exempt organizations' income and expenses. While these data may be useful from a tax administration perspective, they do not provide a truly accurate representation of a business "receipts and expenditures" concept of actual financial activity. An attempt has been made in the lower panel of Figure C to present amounts actually generated and expended by nonprofit charitable organizations, by NTEE major category. This is discussed in the next section of this article, which analyzes Forms 990 and 990-T adjusted, or "derived," income and expense data.

The charitable organizations described under section 501(c)(3) cover a broad range of tax-exempt missions. Myriad organizations with a large number of different nonprofit purposes are included in the nine specific aggregated NTEE major categories (excluding "unknown, unclassified") listed in Figure C. As can be seen from the top part of Figure C, "health" was by far the largest category in terms of returns filed and income reported on Form 990 and Form 990-T. Organizations in this category accounted for 43 percent of the \$4.6 billion of total

Figure D

Formulas Used To Derive Total Receipts, Total Expenditures, Unrelated Business Gross Receipts, and Unrelated Business Total Expenditures, from Forms 990 and 990-T, as Shown in Figure C

Form 990 Total Receipts =

Total revenue (Part I, line 12)

- + Rental expenses1 (Part I, line 6b)
- + Direct expenses from special events, other than fundraising¹ (Part I, line 9b)
- + Cost of sales and services2 (Part I, line 10b)
- Contributions, gifts, and grants received (Part I, line 1d)

Form 990 Total Expenditures =

Total expenses (Part I, line 17)

- + Rental expenses1 (Part I, line 6b)
- + Direct expenses from special events, other than fundraising¹ (Part I, line 9b)
- + Cost of sales and services² (Part I, line 10b)
- Fundraising expenses associated with contributions, gifts, and grants received (Part I, line 15)
- Payments to affiliates (Part I, line 16)
- Grants and allocations (Part II, line 22B)

Form 990-T Unrelated Business Gross Receipts =

Unrelated business gross income (Part I, line 13A)

+ Cost of sales and services2 (Part I, line 2)

Form 990-T Unrelated Business Total Expenditures =

Unrelated business total deductions [sum of total expenses (Part I, line 13B) and total deductions (Part II, line 29)]

- + Cost of sales and services2 (Part I, line 2)
- Charitable contributions paid (Part II, line 20)
- Net operating loss carryover (Part II, line 31)
- Specific deduction3 (Part II, line 33)
- ¹On Form 990, these expenses were deducted from gross income prior to calculating total revenue.
- ² On Forms 990 and 990-T, this expense was deducted from gross income prior to calculating total revenue and unrelated business gross income.
- ³ This was a deduction, up to \$1,000, allowed to all organizations reporting net income on Form 990-T.

unrelated business gross income shown in column 5. They were also responsible for 65 percent of total (related and unrelated) income reported on Form 990. The health category includes organizations that promote the wellness of individuals, the general treatment and prevention of disease or illness (including mental health and illness), and the medical rehabilitation of the physically disabled. Examples are hospi-

tals; nursing or convalescent facilities; health care financing activities; substance abuse treatment services; organizations that study ethics or promote the practice of ethical behavior in medical care and research; health associations active in "Human services" organizations accounted for the second largest number of matched Forms 990 and 990-T filed (26 percent), but only 6 percent of total unrelated business gross income.

the prevention or treatment of diseases; and medical research.

Organizations classified within the NTEE-defined purpose of "mutual, membership benefit" accounted for the second highest amount of UBGI reported, or about 21 percent of the total shown in Figure C. Some types of organizations that can be included in this category are insurance providers; organizations that manage pension and retirement funds; research institutes and public policy organizations; and organizations whose primary purpose is to raise funds (which may also include fund distribution) for a single institution or multiple organizations.

The major category of "education" ranked third in both the amount of UBGI reported and the number of returns filed. Eleven percent of total UBGI was attributable to organizations with educational purposes or programs. This category includes higher education (excluding most colleges and universities operated by State and local Governments), elementary and secondary schools, correspondence schools, libraries, educational testing services, organizations providing opportunities for continuing education outside the framework of formal education, and student services and organizations.

Following health, the "human services" major category accounted for the second largest number of matched Forms 990 and 990-T filed by nonprofit charitable organizations shown in Figure C, but it was responsible for only 6 percent of total UBGI. This major category was comprised of organizations in several classifications performing a variety of services focused on specific needs within the community: housing and shelter programs, including housing, construction, management, and services to assist in locating, acquiring, or sustaining housing; job training and placement services; public safety, disaster pre-

paredness, and relief services, including activities related to the effects of disasters and the providing of relief to accident victims; recreation and sports programs provided by organizations for camps, parks, and playgrounds, and amateur sports activities; crime prevention and legal services; and multipurpose organizations providing a broad range of social or human services to individuals and families.

Analysis of Gross Receipts and Expenditures by Major NTEE Categories, As Derived from Forms 990 and 990-T

The lower panel of Figure C shows "adjusted" income and expense amounts that were derived from amounts specifically reported on Forms 990 and 990-T (contained in the top panel) to portray an actual business, or operating, "receipts and expenditures" concept of tax-exempt organizations' financial activities. When comparing exempt organizations' finances reported on Forms 990 and 990-T, it is important to exclude certain receipts, payments, or deductions--such as contributions, gifts, and grants received or paid; payments to affiliates; and the "net operating loss carryover"--because the receipts were not actively generated by the organizations and the payments or deductions were not considered as current-year operating costs. Also, it is necessary to add back to income the expenses that had been deducted from gross income for tax purposes only (and which, therefore, were excluded from income and deduction totals reported on the IRS forms), so that the Forms 990 and 990-T comparative analysis is based on total, versus "net," receipts from operations.

As mentioned above, Figure D contains a description of the items used to calculate the adjusted amounts. Conclusions about the relative importance of certain financial items to the various NTEE categories of section 501(c)(3) charitable organizations can be drawn from the data in the lower panel of Figure C.

Overall Importance of Forms 990 and 990-T Adjustments Items

In computing "total receipts," the largest financial item that was factored out of reported total revenue on Form 990 was contributions, gifts, and grants received (CGGR). Figure E shows CGGR and other selected items as a percentage of certain income, expense, and deduction items specifically reported on

Figure E

¹ The National Taxonomy of Exempt Entities (NTEE) is a classification system using 26 major field areas that can be aggregated into 10 categories, shown above. It was developed by the National Center for Charitable Statistics. The classifications describe the purposes and activities of nonprofit organizations. See Notes and References, footnote 7.

NOTES: Data are from Forms 990 and 990-T filed by nonprofit charitable organizations that are tax-exempt under Code section 501(c)(3) and exclude private foundations, most churches, and certain other types of religious organizations.

Forms 990 and 990-T. In aggregate, CGGR was close to 10 percent of the total revenue of nonprofit charitable organizations included in Figure C.

Included in CGGR were contributions, gifts, grants, and bequests received directly from the public; indirect public support in the form of contributions received from other fundraising organizations, such as the United Way; and contributions or grants received from a governmental unit. As a counterpart to subtracting CGGR from total revenue, fundraising expenses associated with CGGR were also factored out of total expenses. The three items shown in Figure D other than CGGR that were factored into the derivation of "total receipts" were each less than 1 percent of aggregate total revenue reported on Form 990.

The largest item that affected the computation of aggregate Form 990 "total expenditures" was grants

and allocations made to individuals and organizations, which were 2.7 percent of reported total expenses. All other items used to derive the adjusted amount of aggregate total expenditures shown in Figure D were each less than 1 percent of total expenses reported on Form 990.

The "net operating loss carryover" (NOLC) is a deduction allowed in computing unrelated business taxable income on Form 990-T. Generally, unrelated business losses incurred in prior tax years can be used to reduce taxable income in a later tax year. (See the definition of Net Operating Loss Carryover in the Explanation of Terms section of this article.) Factoring NOLC out of unrelated business total deductions significantly affects the computation of adjusted unrelated business total expenditures. The aggregate NOLC reported by organizations included in Figure C was 18 percent of total deductions reported on Form 990-T.

² Excludes most colleges and universities operated by State and local Governments

³ Less than 0.05 percent.

"Cost of sales and services" was also an important factor in the computation of adjustments to both UBGI and unrelated business total deductions. Cost of sales and services is allowed as a deduction from gross receipts from sales and services prior to computing total unrelated business gross income (which is the determining factor for whether no return, a partial return, or a complete return is required). Therefore, cost of sales and services is reported in the gross income section of Form 990-T, rather than the deductions section, and it is not included in unrelated business total deductions shown in column 6 of Figure C. The \$483.0 million of cost of sales and services used in the Form 990-T computations shown in Figure D were 13 percent of UBGI and 11 percent of unrelated business total deductions reported by section 501(c)(3) charitable organizations in all NTEE categories, combined. Charitable deductions paid and the "specific deduction" (defined in the Explanation of Terms section) were each less than 1 percent of unrelated business total deductions and had little effect on the computation of the adjusted amounts.

Effect of Adjustments on Reported Income, Expenses, and Deductions

As can be seen in Figure E, the results obtained from adjusting reported income and expense amounts vary by NTEE major category. The major NTEE categories most affected by the subtraction of contributions, gifts, and grants (CGGR) from total revenue were "international, foreign affairs," "religion-related," "arts, culture, and humanities," and "environment, animals." Organizations in the "health" category (which includes hospitals) were least affected by the adjustment, with CGGR being only 3 percent of their total revenue. Traditionally, organizations classified within the health category rely much more heavily on revenue from program services, rather than receipts from CGGR, as a major source of income.

Of all items used to adjust Form 990-T gross income and deductions, the "net operating loss carryover" by far had the greatest impact. Adjustments made to Form 990 total expenses primarily affected organizations in the "public, societal benefit" category. Grants and allocations, which were subtracted from total expenses, were 16 percent of the

expenses reported by organizations in this category. For each of the other NTEE major categories shown in Figure E, the ratio of grants and allocations to total expenses was less than 10 percent.

Of all the items used to adjust Form 990-T gross income and deductions, the net operating loss carryover (NOLC) was by far the most important, indicating that these filers had significant business losses in the immediately preceding years. Factoring the NOLC out of Form 990-T unrelated business total deductions had the greatest impact on the NTEE categories of environment, animals; international, foreign affairs; health; and arts, culture, and humanities. Cost of sales and services (CSS) from unrelated business activities was added to both gross income and total deductions in the computation of unrelated business receipts and expenditures. Therefore, the CSS adjustment did not impact the amount of receipts over expenses shown in column 15 of Figure C, but it significantly increased unrelated business gross income reported by organizations in each of the NTEE major categories of environment, animals; "education"; health; and public, societal benefit.

Measuring Unrelated Business Involvement Using Derived Amounts

As stated earlier, adjustments to Forms 990 and 990-T reported amounts were made for the purpose of comparing the related and unrelated financial activities of nonprofit charitable organizations, which required an attempt to make both types of receipts and expenditures more analogous. The lower panel of Figure C was designed to allow for a more accurate analysis of related and unrelated finances by treating both types of receipts and expenditures as consistently as possible. It is not intended for any other types of analysis.

A comparison of Form 990 total revenue minus expenses (column 4) and total receipts minus expenses (column 12) illustrates the importance of the receipt of contributions, gifts, and grants to the programs of nonprofit charitable organizations. After adjustments, receipts minus expenses were significantly reduced for all NTEE major categories, except for health, where the reduction were small relative to the others, and for the category of "mutual, membership benefit," where receipts minus expenses increased slightly.

Adjustments to income and deductions resulted in significantly higher derived amounts of unrelated business gross receipts minus expenditures shown in column 15, compared to their counterpart amounts shown in column 7, which were specifically reported on Form 990-T. Unrelated business net income (less loss) changed from negative to positive for NTEE categories as a whole and for three specific categories: arts, culture, and humanities; education; and public, societal benefit. Factoring the net operating loss carryover out of unrelated business total deductions was the primary reason for this result. However, organizations in the NTEE categories of environment, animals; health; "human services"; international, foreign affairs; and religion-related still had negative net income (less loss), or apparently unprofitable unrelated business operations, after subtracting out the NOLC from their respective unrelated business total deductions. The section, Income and Deductions, above, contains a discussion of the types of deductions reported on Form 990-T and their connection with annual overall deficits reported by nonprofit organizations since Tax Year 1990.

The percentages shown in columns 8 and 16 of Figure C are indicators of the extent to which section 501(c)(3) charitable organizations engage in unrelated business activities. They represent the ratio of unrelated income to total (related and unrelated) income. The percentages shown in column 8, based on actual amounts reported on the returns, are generally smaller than those shown in column 16, based on derived amounts. Also, the NTEE major categories fall into a different order of dominance, in terms of unrelated business activity, as measured by the percentages in the two columns.

The column 16 percentages, which take into account the adjustments shown in Figure D, indicate that a small proportion, 1.5 percent, of the total receipts of all section 501(c)(3) charitable organizations shown in Figure C was generated from unrelated business activities. Based on derived Forms 990 and 990-T receipts, the percentages in column 16 increased over those in column 8 for all of the NTEE major categories, except mutual, membership benefit, which remained the same. As a group, organizations classified in Figure C as religion-related, which excludes most churches (see footnote 2 at the end of this article), were more extensively involved in generating income from unrelated business activities than

those included in other NTEE categories, with more than 12 percent of total receipts coming from unrelated business receipts.

The religion-related NTEE major category includes organizations whose primary purpose is worship, religious training or study, governance or administration of organized religions, or the promotion of religious activities. As already mentioned, most churches were excluded from the Form 990-T integrated sample because they are not required to file Form 990. In addition to churches and other organized places of worship, the religion-related category could include religious associations; church auxiliaries; religious orders; missions; and religious organizations involved in advocacy, research, fundraising, management support, media, or publishing activities. Less than 1 percent of total receipts was attributable to unrelated business activities within the education and health classifications. The remaining major NTEE categories shown in Figure C had UBGR-tototal-receipts ratios of 6 percent to 8 percent.

Summary

After applying \$8.5 billion of total deductions against \$7. 8 billion of gross unrelated business income (UBI), nonprofit organizations reported an overall net income (less deficit) of \$-0.7 billion for Tax Year 1997. The \$1.4 billion of taxable profits from unrelated business income reported on Forms 990-T, Exempt Organizations Business Income Tax Returns, represented an 18-percent increase over 1996--much smaller than the 31-percent and 39percent increases, respectively, associated with Tax Years 1995 and 1996. The unrelated business income tax (UBIT) liability associated with taxable profits was \$418.4 million. In addition to UBIT, the \$422.7 million of total tax took into account \$7.2 million of "proxy tax" on certain lobbying and political expenditures, \$1.0 million of "alternative minimum tax," and \$3.9 million of tax credits. Seventy-two percent of reported total tax was attributable to Internal Revenue Code section 501(c)(9) voluntary employee beneficiary associations and section 501(c)(3) charitable organizations.

The number of returns filed between 1996 and 1997 declined, overall, by 3 percent, from 40,621 to 39,302. Organizations with gross UBI of \$10,000 or less filed 14 percent fewer Forms 990-T from 1996 to 1997, while the number of returns filed by organi-

zations with larger amounts of gross UBI increased by 7 percent. The largest drop in filers, by type of organization, was for Individual Retirement Arrangement (IRA) trusts, tax-exempt under Code section 408(e), which filed 28 percent fewer Forms 990-T, compared to 1996.

Using the National Taxonomy of Exempt Entities (NTEE) classification system, an "integrated" sample of Form 990 (Return of Organization Exempt From *Income Tax*) and 990-T returns filed for 1997 by the same section 501(c)(3) charitable organizations was classified by institutional purpose and major programs. "Health" was by far the largest NTEE major category in terms of returns filed and income reported on Forms 990 and 990-T that were part of the integrated sample. Organizations in this category filed 32 percent of the population of 7,543 returns estimated from the integrated sample, 65 percent of Form 990 total income, and 43 percent of Form 990-T gross UBI. Organizations with an NTEE classification of "mutual, membership benefit" were small in number, based on the integrated sample, but accounted for the second highest amount of gross UBI reported, or 21 percent of the total. "Human services" organizations filed the second highest number of "matched" Forms 990 and 990-T, 26 percent, but were responsible for only 6 percent of gross UBI reported. "Education" ranked third in both the amount of gross UBI reported (11 percent of the total) and the number of Forms 990-T filed (16 percent of the total).

Based on adjusted income amounts derived from returns in the integrated sample, the group of organizations classified as "religion-related" were more extensively involved in unrelated business activities than organizations within other NTEE major categories. These organizations generated a little more than 12 percent of total receipts (related plus unrelated) from unrelated business gross receipts (UBGR). Six out of the eight other NTEE major groups of organizations had UBGR-to-total-receipts ratios ranging from 6 percent to 8 percent. These six groups were classified as "arts, culture, and humanities"; "environment, animals"; human services; "international, foreign affairs"; mutual, membership benefit; and "public, societal benefit". For the remaining two major NTEE groups, education and health, less than 1 percent of total receipts was attributable to unrelated business activities.

Data Sources and Limitations

The statistics in this article are based on a sample of Tax Year 1997 Forms 990-T, Exempt Organization Business Income Tax Return. The Internal Revenue Service required organizations having accounting periods beginning in 1997 (and, therefore, ending between December 1997 and November 1998) to file a 1997 Form 990-T to report any unrelated business income. The associated required filing period for Tax Year 1997 Forms 990-T generally was May 1998 to April 1999 (April 1998 to March 1999 for Internal Revenue Code section 220(e). 401(a), and 408(e) trusts), but extensions of time to file beyond this period were granted to many organizations. Returns filed after Calendar Year 1999 were not included in the sample. Because the accounting periods of the organizations filing a 1997 return vary, the financial activities covered in this article span the period January 1997 through November 1998 (although the majority of activities occurred during Calendar Year 1997).

The data analyzed in the section titled Nonprofit Charitable Organizations Classified by National Taxonomy of Exempt Entities (and presented in Figures C and E) were from matched Forms 990 and 990-T returns filed by Internal Revenue Code section 501(c)(3) charitable organizations. As explained earlier, this matching procedure ensured that the Form 990-T sample included unrelated business income tax returns filed by any tax-exempt organizations whose information returns were selected for the Form 990 sample of section 501(c)(3) organizations [13]. (The various types of tax-exempt organizations subject to the unrelated business income tax provisions are described by Code section in the Appendix to this article.) The Form 990-T sample is described below.

The population from which the 1997 Form 990-T sample was drawn consisted of Form 990-T records posted to the IRS Business Master File system during 1998 and 1999. The returns in the sample were stratified based on the size of gross unrelated business income (UBI). A sample of 8,052 returns was selected from a population of 39,521. After excluding returns that were selected for the sample but later rejected, the sample size was 8,002, and the estimated population size was 39,302. Rejected returns included those which had gross UBI below the

\$1,000 filing threshold, were filed only to claim a refund or report the "proxy tax," or were filed for a part-year accounting period that began in a year other than 1997. For example, a final return filed for the short period of January 1998-- June 1998 may have been selected for the 1997 sample based on the criterion of an accounting period that ended between December 1997 and November 1998, but it was rejected because, in actuality, it was a Tax Year 1998 return.

Sampling rates ranged from a minimum of 5 percent (Form 990-T gross UBI less than \$20,000, with either no Form 990 match or a Form 990 match to a Code section 501(c)(3) return with assets under \$2,500,000) to a maximum of 100 percent (either Form 990-T gross UBI of \$300,000 or more, or Form 990-T with any amount of gross UBI and a match to a section 501(c)(3) Form 990 with assets of \$10,000,000 or more). Other Forms 990/990-T matches within various ranges of gross UBI, assets, and Internal Revenue Code sections were selected at rates ranging from 10 percent to 40 percent.

The information presented in this article was obtained from returns as originally filed with the IRS. The data were subjected to comprehensive testing and correction procedures in order to improve statistical reliability and validity. In most cases, changes made to the original return as a result of administrative processing, audit procedures, or a taxpayer amendment were not incorporated into the data base.

Because the data are based on a sample, they are subject to sampling error. In order to use these statistics properly, the magnitude of the sampling error, measured by the coefficient of variation (CV), should be taken into account. Figure F shows CV's for selected financial data. CV's are not shown for returns with gross UBI of \$500,000 or more because they were sampled at a 100-percent rate and, therefore, are not subject to sampling variability. A discussion of the reliability of estimates based on samples and methods for evaluating both the magnitude of sampling and nonsampling error and the precision of sample estimates can be found in the general Appendix, located near the back of this issue of the *Bulletin*.

Explanation of Selected Terms

In some of the following explanations, tax-exempt organizations are cited by the Internal Revenue Code

Figure F

Coefficients of Variation for Selected Items, by Size of Gross Unrelated Business Income, Tax Year 1997

	Gross		Net	
	unrelated	Total	income	Total
Size of gross unrelated	business	deductions	(taxable	tax
business income (UBI)	income		profit)	
	Coef	ficient of varia	ation (percent	ages)
	(1)	(2)	(3)	(4)
Total	0.26	0.66	0.49	0.99
\$1,000 under \$10,001 1	2.75	8.21	5.24	7.41
\$10,001 under \$100,000 1	1.38	4.26	4.16	5.06

\$500,000 or more	N/A	N/A	N/A	N/A

¹The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

N/A - Not applicable

section under which they are described. The various types of tax-exempt organizations subject to the unrelated business income tax provisions are described by Code section in the Appendix to this article.

Advertising Income.—Gross income realized by a tax-exempt organization from the sale of advertising in a periodical was gross income from an unrelated trade or business activity involving the "exploitation of an exempt activity," namely, the circulation and readership of the periodical developed by producing and distributing the readership content of that periodical. Advertising income was reported separately from other types of "exploited exempt activity income." (See the explanation of Exploited Exempt Activity Income.) Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported gross advertising income, as well as other types of "exploited exempt activity income," as gross receipts from sales and services. All other organizations reported this income separately.

Capital Gain Net Income.—Generally, organizations required to file Form 990-T (except organizations tax-exempt under Internal Revenue Code sections 501(c)(7), (9), and (17)) were not taxed on net gains from the sale, exchange, or other disposition of

property. However, net capital gains on sales of debt-financed property, certain gains on the cutting of timber (section 1231), and gains on sales of certain depreciable property (described in sections 1245, 1250, 1252, 1254, and 1255) were taken into account in computing capital gain net income. (See the explanation of Investment Income (Less Loss) for information regarding investment income of section 501(c)(7), (9), and (17) organizations.)

Contributions.—To the extent permissible under the Internal Revenue Code, a deduction was allowed for contributions or gifts actually paid within the tax year to, or for the use of, another entity that was a charitable or governmental organization described in Code section 170(c). Any unused contributions carried over from earlier years were also allowed. The contributions deduction was allowed whether or not directly connected with the carrying on of a trade or business.

Deductions Directly Connected With Unrelated Business Income.—These were deductions allowed in computing net income, if they otherwise qualified as income tax deductions under the Internal Revenue Code and if they had a "proximate and primary" relationship to carrying on an unrelated trade or business. Allowable deductions included those directly connected with rental of personal property; those allocable to unrelated debt-financed income; those directly connected with investment income of Internal Revenue Code section 501(c)(7). (9), and (17) organizations; those allocable to interest, annuities, royalties, and rents received from "controlled organizations" (see definition of Income from Controlled Organizations); those allocable to "exploited exempt activity income" other than advertising; direct advertising costs; compensation of officers, directors, and trustees; salaries and wages; repairs; bad debts; interest; taxes; depreciation (unless deducted elsewhere); depletion; contributions to deferred compensation plans; contributions to employee benefit plans; the "net operating loss carryover"; and "other deductions." Tax-exempt organizations with gross unrelated business income (UBI) above \$10,000 were required to report each deduction component separately. Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 reported a single total of the first five types of directly-connected expenses listed above (those described as "allocable to") and a single total for all

other types of deductions (both deductions directly connected with UBI and those not directly connected, each defined below), except for two items that were required to be reported separately: the "net operating loss carryover" and the "specific deduction," also defined below.

Deductions Not Directly Connected With Unrelated Business Income.—The component deductions were "set-asides," "excess exempt expenses," charitable contributions, and the "specific deduction." The specific deduction was reported, when applicable, by all organizations with positive taxable income; the other types of deductions not directly connected with UBI were reported separately, when applicable, only by tax-exempt organizations with gross UBI above \$10,000. (See, also, the explanations of Set-asides, Excess Exempt Expenses, and the Specific Deduction.)

Excess Exempt Expenses.—The two types of "excess" expenses allowed as deductions from unrelated business income were (1) excess exempt expenses attributable to commercial exploitation of exempt activities, and (2) excess exempt expenses attributable to advertising income. In the case of "exploited" exempt activity income (see the explanation of Exploited Exempt Activity Income, Except Advertising, below), if the expenses of the organization's exempt activity exceeded the income from the exempt activity, then the excess of exempt expenses over exempt income could be used to offset any positive net unrelated business income produced from exploiting the exempt activity, to the extent that it did not result in a loss. Excess expenses of a commercially exploited exempt activity could not be used to offset income from another type of unrelated business activity if the unrelated activity did not exploit that particular exempt activity. In the case of excess exempt expenses attributable to advertising income, if the expenses attributable to producing and distributing the readership content of a periodical exceeded the circulation income, then the excess of readership costs over circulation income could be used to offset any net gain from advertising (gross advertising income less direct advertising costs), to the extent that it did not result in a loss.

Exploited Exempt Activity Income, Except Advertising.—In some cases, exempt activities create goodwill or other intangibles that are capable of being exploited in a commercial manner. When an

organization exploited such an intangible in commercial activities that did not contribute importantly to the accomplishment of an exempt purpose, the income it produced was gross income from an unrelated trade or business. An example of this type of activity would be an exempt scientific organization with an excellent reputation in the field of biological research that exploits its reputation regularly by selling endorsements of laboratory equipment to manufacturers. Endorsing laboratory equipment would not have contributed importantly to the accomplishment of any purpose for which tax exemption was granted to the organization. Accordingly, the income from selling such endorsements is gross unrelated business income. Exploited exempt activity income from advertising was reported separately from other types of exploited exempt activity income (see the explanation of Advertising Income). Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported income from exploited exempt activities as gross receipts from sales and services. All other organizations reported this income separately.

Gross Profit (Less Loss) from Sales and Services.—This was the gross profit (less loss) from any unrelated trade or business regularly carried on that involved the sale of goods or performance of services. It did not include income from unrelated business activities that were required to be reported separately on any of the tax form's supporting schedules. For example, an Internal Revenue Code section 501(c)(7) social club would include gross restaurant and bar receipts from nonmembers in the calculation of gross profit (less loss) from sales and services, but would report its investment income from sales of securities on the required supporting schedule. Gross profit (less loss) from sales and services is computed as gross receipts from sales or services, less returns and allowances, minus cost of sales and services.

Gross Unrelated Business Income (UBI).—
This was the total gross unrelated business income (see the explanation of Unrelated Business Income), prior to reduction by allowable deductions used in computing unrelated business taxable income. All organizations were required to report detailed sources of gross UBI. The components of gross UBI, as shown on the tax return, were gross profit (less loss) from sales and services; capital gain net income; net gain (less loss), sales of noncapital assets; net capital loss deduction (trusts only); income (less loss) from

partnerships; rental income; unrelated debt-financed income; investment income (less loss) of Internal Revenue Code section 501(c)(7), (9), and (17) organizations; annuities, interest, rents, and royalties from controlled organizations; "exploited exempt activity" income; advertising income; and "other" income (less loss). (For an explanation of these sources of income, see the separate explanations of each component.)

Income from Controlled Organizations.—A new definition of "controlled organization" was effective for tax years beginning after August 5, 1997. However, there was a 2-year grace period for organizations that had a written, binding contract with a controlled organization that was in effect on June 8, 1997. Organizations qualifying for the grace period reported income under the old law. (A very small number of Tax Year 1997 Forms 990-T included controlled-organization income that was calculated under new rules.) Under both the old and new tax law provisions, all deductions "directly connected" with a Form 990-T filer's gross controlled-organization income were allowed. The rules for debt-financed property did not apply to passive income (generally, investment income) from controlled organizations. (See the definition of Unrelated Debtfinanced Income.)

For organizations that had tax years beginning on or before August 5, 1997, or were covered by the 2-year grace period: When an exempt organization controls another organization the gross annuities, interest, rents, and royalties from the controlled organization are included in the gross UBI of the controlling organization at a specified ratio, depending on whether the controlled organization is tax-exempt or not. "Control" meant: (a) for a stock corporation, the ownership of stock possessing at least 80 percent of the total combined voting power of all classes of stock entitled to vote, and ownership of at least 80 percent of the total number of shares of all other classes of stock of the corporation; or (b) for a nonstock organization, at least 80 percent of the directors or trustees of the organization were either representatives of, or directly or indirectly controlled by, a tax-exempt organization.

For organizations that had tax years beginning after August 5, 1997, and were not covered by the 2-year grace period: When an exempt organization controls another organization, the entire amount of gross annuities, interest, rents, and royalties (termed

"specified payments" under the new law) from the controlled organization are included in the gross UBI of the controlling organization, to the extent that the specified payments reduced the net unrelated income (or increased the net unrelated loss) of the controlled organization. "Net unrelated income (or loss)" for an exempt controlled organization was its unrelated business taxable income (or loss). For a nonexempt controlled organization, it was the part of its taxable income (or loss) that would be unrelated business taxable income (or loss) if it were exempt and had the same exempt purpose as the controlling organization. "Control" meant: (a) for a stock corporation, the ownership (by vote or value) of more than 50 percent of the stock; (b) for a partnership, ownership of more than 50 percent of the profits or capital interests; or (c) for any other organization, ownership of more than 50 percent of the beneficial interests.

Income (Less Loss) from Partnerships.—If an organization was a partner in any partnership that carried on an unrelated trade or business, this was the organization's share of partnership gross unrelated business income less its share of partnership deductions that were directly connected with the unrelated income.

Investment Income (Less Loss).— This income was reported only by organizations exempt under Internal Revenue Code sections 501(c)(7), (9), and (17) and included such income as gross unrelated debt-financed income, gross income from the ownership or sale of securities, and set-asides deducted from investment income in previous years that were subsequently used for a purpose other than that for which a deduction was allowed. (See, also, the explanation of Set-asides.) All gross rents (except those that were exempt-function income) of section 501(c)(7), (9), and (17) organizations were treated as unrelated business income and were reported as "rental income." Organizations exempt under sections other than 501(c)(7), (9), and (17) did not report "investment income (less loss)." Generally, these organizations' investment income (dividends, interest, rents, and annuities) and royalty income were not taxed as unrelated business income, unless it was income, other than dividends, from a controlled organization or debt-financed income, or the rents were of the type described in the explanation of rental income. (See explanations of Income from Controlled

Organizations, Rental Income, and Unrelated Debtfinanced Income.)

Net Capital Loss (Trusts Only).—If a trust had a net loss from sales or exchanges of capital assets, it was allowed a deduction for the amount of the net loss or \$3,000, whichever was lower. (Tax-exempt corporations were not allowed to deduct any excesses of capital losses over capital gains.) Tax-exempt trusts reported the net capital loss deduction on Form 990-T as a negative component of gross unrelated business income.

Net Gain (Less Loss), Sales of Noncapital Assets.—This was the gain or loss from the sale or exchange of business property, as reported on Form 4797, Sales of Business Property. Property other than capital assets generally included property of a business nature, in contrast to personal and investment properties, which were capital assets.

Net Income (Less Deficit).—This was gross income derived from any unrelated trade or business regularly carried on by an exempt organization, less deductions directly connected with carrying on the trade or business and less other allowable deductions not directly connected. On a return-by-return basis, the result of this computation was either positive (net income), negative (deficit), or zero. Net income represented taxable profit, which was subject to the unrelated business income tax. (See, also, explanations of Deductions Directly Connected With Unrelated Business Income and Deductions Not Directly Connected With Unrelated Business Income.)

Net Operating Loss Carryover.—The net operating loss carryover (as described in Internal Revenue Code section 172) was allowed as a deduction in computing unrelated business taxable income. However, the net operating loss carryback or carryover (allowed only to or from a tax year for which the organization was subject to tax on unrelated business income) was determined without taking into account any amount of exempt-function income or deductions that had been excluded from the computation of unrelated business taxable income. A "net operating loss" represented the excess of deductions over receipts for a specified year for which an organization reported an overall deficit from its unrelated trade or business activities. The statistics in this article represent only the net operating loss carryover because carrybacks from future years

would be reported in a later year on an amended return, not on the return as initially filed (which served as the basis for the statistics).

Other Deductions.—This included all types of unrelated business deductions that were not specifically required to be reported elsewhere on the tax return. Examples are fees for accounting, legal, consulting, or financial management services; insurance costs (if not for employee-related benefits); equipment costs; mailing costs; office expenses, such as janitorial services, supplies, or security services; rent; travel expenses; educational expenses; and utilities.

Other Income (Less Loss).—This included all types of unrelated business income that were not specifically required to be reported elsewhere on the tax return. Examples are insurance benefit fees; member support fees; commissions; returned contributions that were deducted in prior years; income from insurance activities that was not properly set aside in prior years; recoveries of bad debts; and refunds of State or local tax payments, if the payments were previously reported as a deduction.

Proxy Tax.—This was a tax on certain nondeductible lobbying and political expenditures paid or incurred after December 31, 1993, by organizations that were tax-exempt under Internal Revenue Code sections 501(c)(4), 501(c)(5), and 501(c)(6). If the organization failed to notify its members regarding their shares of dues to which nondeductible lobbying and political expenditures were allocable, or if the notice did not include the entire amount of dues that were allocable, then the proxy tax was imposed on the organization. It was computed as the aggregate amount of nondeductible lobbying expenditures that was not included in the notices sent to the organization's members, multiplied by 35 percent. The proxy tax was required to be reported on Form 990-T and was included in total tax; however, there was no connection between the proxy tax and the taxation of income from an organization's unrelated business activities.

Rental Income.—For organizations tax-exempt under Internal Revenue Code sections other than 501(c)(7), (9), and (17), this was the amount of (1) gross rents from personal property (e.g., computer equipment or furniture) leased with real property, if the rental income from the personal property was more than 10 percent, but not more than 50 percent,

of the total rents from all leased property; or (2) gross rents from both real property and personal property leased with real property if the personal property was more than 50 percent of the total rents from all leased property. Except for the second situation covered above, gross rents from real property generally were excluded in computing unrelated business taxable income. In addition, gross rents from personal property that did not exceed 10 percent of the total rents from all leased property were excluded. Any rents excluded from the explanation of "rental income" had to be considered in terms of their taxability as unrelated business income from controlled organizations or unrelated debt-financed income, in that order. For organizations tax-exempt under sections 501(c)(7), (9), and (17), rental income included all gross rents (except those that were exempt-function income), with no exclusions. (See explanations of Income from Controlled Organizations and Unrelated Debt-financed Income.)

Set-asides.—These amounts were allowed to social clubs (Internal Revenue Code section 501(c)(7)), voluntary employees' beneficiary associations (section 501(c)(9)), and supplemental unemployment benefit trusts (section 501(c)(17)) as a deduction from investment income. The deduction was equal to the amount of passive income (generally, investment income) that these organizations set aside (1) to be used for charitable purposes or (2) to provide payment of life, health, accident, or other insurance benefits (section 501(c)(9) and (17) organizations only). However, any amounts set aside that exceeded the "qualified asset account" limit, as figured under section 419A, were not allowed as a deduction from unrelated business investment income: they were treated as taxable investment income. A section 419A qualified asset account is any account consisting of assets set aside to provide for the payment of disability benefits, medical benefits, severance pay benefits, or life insurance benefits.

Specific Deduction.—The specific deduction was \$1,000 or the amount of positive taxable income, whichever was less. The amount deducted was considered "not directly connected" with gross unrelated business income and was allowed to all organizations that had positive taxable income after all other types of deductions were taken. This deduction provided the equivalent benefit of the \$1,000 gross unrelated business income filing threshold under

which some organizations were exempted from filing a return and paying the unrelated business income tax.

Total Deductions.—Total Deductions included both deductions reported on the main part of Form 990-T and expense items reported on any of six supporting schedules, which were also part of the tax form. It excluded cost of sales and services (\$2.0 billion for 1997), which was subtracted from gross receipts from sales and services in computing gross profit (less loss) from sales and services. Gross profit (less loss) from sales and services was a component of gross unrelated business income (UBI). Because Form 990-T filing requirements are based on gross UBI, and cost of sales and services is factored into the computation of gross income, the deduction for cost of sales and services is reported in the gross income section of Form 990-T, not the deductions section. Cost of sales and services was reported as a lump-sum total, but may have included depreciation, salaries and wages, and certain other types of deductible items. For this reason, the total amount shown for some of the separately reported components of total deductions, such as "salaries and wages," may be understated.

Total Tax.—Total tax was unrelated business income tax less the foreign tax credit, general business credit, credit for prior-year minimum tax, and other allowable credits, plus the "proxy tax" on certain lobbying expenditures, the tax from recomputing certain prior-year credits ("recapture taxes"), and the "alternative minimum tax."

Unrelated Business Income.—This was income of a tax-exempt organization that was from a trade or business which was regularly carried on by the organization and which was not substantially related to the performance of the organization's exempt purpose or function (other than that the organization needed the profits derived from the unrelated activity). The term "trade or business" generally comprised any activity carried on for the production of income from selling goods or performing services. Activities of producing or distributing goods or performing services from which gross income was derived did not lose their identity as trades or businesses merely because they were carried on within a larger aggregate of similar activities or within a larger complex of other endeavors that may, or may not, have been related to the exempt purposes of the organization.

Unrelated Business Income Tax.—This was the tax imposed on unrelated business net income (taxable profit). It was determined based on the regular corporate or trust income tax rates that were in effect for the 1997 Tax Year, as shown in the following schedules.

Tax Rates for Corporations

Amount of unrelated business taxable income is:

Over—	But not over—	Tax is:	or the amount over—
\$0	\$50,000	15%	\$0
50,000	75,000	\$7,500+25%	50,000
75,000	100,000	13,750+34%	75,000
100,000	335,000	22,250+39%	100,000
335,000	10,000,000	113,900+34%	335,000
10,000,000	15,000,000	3,400,000+35%	10,000,000
15,000,000	18,333,333	5,150,000+38%	15,000,000
18,333,333		35%	0

Tax Rates for Trusts

Amount of unrelated business taxable income is:

Over—	But not over—	Tax is:	Of the amount over—
\$0	\$1,600	15%	\$0
1,650	3,900	\$247.50+28%	1,650
3,900	5,950	877.50+31%	3,900
5,950	8,100	1,513.00+36%	5,950
8,100		2,287.00+39.6%	8,100

Unrelated Debt-financed Income.—Gross income from investment property for which there was acquisition indebtedness outstanding at any time during the tax year was subject to the unrelated business income (UBI) tax. The percentage of investment income to be included as gross UBI was proportional to the ratio of average acquisition indebtedness to the average adjusted basis of the property. Various types of passive income (generally, investment income) were considered to be unrelated debt-

financed income, but only if the income arose from property acquired or improved with borrowed funds and if the production of income was unrelated to the organization's tax-exempt purpose. When any property held for the production of income by an organization was disposed of at a gain during the tax year, and there was acquisition indebtedness outstanding at any time during the 12-month period prior to the date of disposition, the property was considered debtfinanced property, and the gain was treated as unrelated debt-financed income. Income from debtfinanced property did not include rents from personal property (e.g., computers or furniture) leased with real property, certain passive income (generally, investment income) from controlled organizations, and other amounts that were otherwise included in computing unrelated business taxable income. Internal Revenue Code section 501(c)(7), (9), and (17) organizations reported all debt-financed income as "Investment Income (Less Loss)." All other organizations reported debt-financed income separately.

Notes and References

[1] Churches, which are tax-exempt under section 501(c)(3), are not required to apply for exemption unless they desire to obtain an Internal Revenue Service ruling, and they do not have to file a Form 990 information return. Private foundations and certain charitable trusts file an information return on Form 990-PF, Return of Private Foundation or Section 4947(a)(1) Nonexempt Charitable Trust Treated as a Private Foundation. For the most recent Form 990 annual data on organizations tax-exempt under Internal Revenue Code sections 501(c)(3) (excluding private foundations and most religious organizations) through 501(c)(9), see Arnsberger, Paul, "Charities and Other Nonprofit Organizations, 1997," Statistics of Income Bulletin, Fall 2000, Volume 20, Number 2. For the most recent annual data on private foundations, see Whitten, Melissa, "Domestic Private Foundations and Charitable Trusts, 1996-1997," Statistics of Income Bulletin, Fall 2000, Volume 20, Number 2. Internal Revenue Code section 4947(a)(1) "nonexempt charitable trusts" and section 4947(a)(2) "split-interest trusts" are required to report unrelated business income on Form 1041, Estate and Trust Income Tax

- Return, rather than Form 990-T. Information on nonexempt charitable trusts can be found in Whitten, cited above. For results of a new SOI study of certain types of split-interest trusts, which file Form 5227, Return of Split-interest Trust, see Belvedere, Melissa J., "Charitable Remainder Trusts, 1998," Statistics of Income Bulletin, Winter 2000-2001, Volume 21, Number 3.
- [2] While most tax-exempt organizations are required to file a Form 990/990EZ information return each year, Form 990-T is required to be filed only for a year in which a tax-exempt organization has unrelated business income.
- [3] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary, or religious in nature, or organizations that test for public safety or prevent cruelty to children or animals. The term also covers organizations that otherwise qualified for tax-exempt status under the Income Tax Regulations issued for Internal Revenue Code section 501(c)(3).
- [4] The \$2.0 billion in costs of sales and services are not included in total deductions. These costs are subtracted from gross receipts from sales and services prior to computing gross unrelated business income on Form 990-T.
- [5] Taxes other than UBIT can also include "recapture taxes" (such as from recomputation of prior-year investment or low-income housing credits), but none were reported on Forms 990-T for 1997. Credits against tax included the foreign tax credit, general business credit, prior-year minimum tax credit, and other credits (such as the U.S. possessions tax credit, nonconventional source fuel credit, and qualified electric vehicle credit).
- [6] For example, the investment portfolios of nonprofit trusts are usually overseen by only one or two trust managers, so deductions for salaries and wages, a significant deduction item for many corporate nonprofit entities, are relatively small, resulting in higher taxable income.
- [7] For information on the National Taxonomy of Exempt Entities classification system, see Hodgkinson, Virginia A.; Weitzman, Murray S.;

- et.al., Nonprofit Almanac, 1996-1997: Dimensions of the Independent Sector, Jossey-Bass, Inc., 1996; Stevenson, David R.; Pollak, Thomas H.; and Lampkin, Linda M.; et.al., State Nonprofit Almanac 1997: Profiles of Charitable Organizations, The Urban Institute, 1997; and The National Taxonomy of Exempt Entities Manual, The Urban Institute, 1997.
- [8] In addition to Forms 990, the section 501(c)(3) sample included Forms 990-EZ (Short Form Return of Organization Exempt From Income Tax) which could be filed by smaller organizations (those with annual gross receipts of less than \$100,000 and total end-of-year assets of less than \$250,000). A small number of these returns matched Forms 990-T in the integrated sample, but they were excluded from the analysis because they did not contain all of the detailed financial data items reported on Form 990 that are needed for comparison with Form 990-T financial data. (Some items that were required to be reported separately on Form 990 were allowed to be lumped together in an "other" category on the Form 990-EZ, such as "other income.")
- [9] For additional information on the Form 990 and Form 990-T integrated sample design, see Harte, James M. and Hilgert, Cecelia H., "Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations," Statistics of Income: Turning Administrative Systems Into Information Systems, 1993.
- [10] The Form 990 sample weights, rather than the Form 990-T sample weights, were used to produce matched Forms 990/990-T population estimates presented in this section of the article. The matched data represent Form 990-T information reported only by the organizations whose returns were selected for the section 501(c)(3) Form 990 sample. Some tax-exempt organizations file Form 990-T but do not file Form 990. See footnote 11, items (2), (3), and (4), for a description of these organizations.

- Form 990-T sample weights were used to produce the estimates presented elsewhere in this article. Because Figure C is based on Form 990 sample weights, and the statistics presented in all other sections of this article are based on Form 990-T sample weights, data in Figure C are not comparable to the data shown in Figure A or Tables 1 through 7. For detailed information on Statistics of Income sampling methodology for producing population estimates, see the general appendix, located near the back of this issue of the *Bulletin*, particularly the Sample Criteria and Selection of Returns section and the Method of Estimation section. See, also, the Data Sources and Limitations section of this article.
- [11] Some reasons why the estimates of matched Form 990-T filings shown in Figure C (produced using Form 990 sample weights) are lower than the estimates of overall Form 990-T filings shown in Table 1 (produced using Form 990-T sample weights) are (1) Forms 990-T and matching "short" Forms 990-EZ that were part of the integrated samples were excluded from the matched-return analysis (see footnote 8); (2) some organizations filed a Form 990-T, but did not file a Form 990 because their gross receipts were below the \$25,000 Form 990 filing threshold; (3) churches, which are tax-exempt under Internal Revenue Code section 501(c)(3), are not required to file Form 990 or Form 990-EZ, but are required to file Form 990-T if they had unrelated business income; and (4) private foundations, which are tax-exempt under section 501(c)(3), file Form 990-PF, not Form 990; therefore, a Form 990-T filed by a private foundation would not have a matching record in the Form 990 sample.
- [12] For more information on the NTEE classification of all section 501(c)(3) organizations filing Forms 990, see Arnsberger, cited in footnote 1.
- [13] For an explanation of the Form 990 section 501(c)(3) sample, see the Data Sources and Limitations section in Arnsberger, cited in footnote 1.

Appendix Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section

Code section	Description of organization	General nature of activities
220(e)	Medical Savings Accounts (MSA's)	Fiduciary agent for accounts used in conjunction with high-deductible health plans to save funds for future medical expenses.
401(a)	Qualified pension, profit-sharing, or stock bonus plans	Fiduciary agent for pension, profit-sharing, or stock bonus plans
408(e)	Individual Retirement Arrangements (IRA's)	Fiduciary agent for retirement funds
501(c)(2)	Title-holding corporations for exempt organizations	Holding title to property for exempt organizations
(3)	Religious, educational, charitable, scientific, or literary organizations; testing for public safety organizations. Also, organizations preventing cruelty to children or animals, or fostering national or international amateur sports competition	Activities of a nature implied by the description of the class of organization
(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare and activities from which net earnings are devoted to charitable, educational, or recreational purposes
(5)	Labor, agricultural, and horticultural organizations	Educational or instructive groups whose purpose is to improve conditions of work, products, and efficiency
(6)	Business leagues, chambers of commerce, real estate boards, and like organizations	Improving conditions in one or more lines of business
(7)	Social and recreational clubs	Pleasure, recreation, and social activities
(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, health, accident, or other insurance benefits to members
(9)	Voluntary employees' beneficiary associations (including Federal employees' voluntary beneficiary associations formerly covered by section 501(c)(10))	Providing for payment of life, health, accident, or other insurance benefits to members
(10)	Domestic fraternal societies and associations	Lodges, societies, or associations devoting their net earnings to charitable, fraternal, and other specified purposes, without life, health, accident, or other insurance benefits to members
(11)	Teachers' retirement fund associations	Fiduciary association providing for payment of retirement benefits
(12)	Benevolent life insurance associations, mutual ditch or irrigation companies, mutual or cooperative telephone companies, and like organizations	Activities of a mutually beneficial nature implied by the description of the class of organization
(13)	Cemetery companies	Arranging for burials and incidental related activities

Appendix
Types of Tax-Exempt Organizations Subject to the Unrelated Business Income Tax Provisions, by Internal Revenue Code Section--Continued

Code section	Description of organization	General nature of activities
501(c)(14)	State-chartered credit unions and mutual insurance or reserve funds	Providing loans to members or providing insurance of, or reserve funds for, shares or depoits in certain banks or loan associations
(15)	Mutual insurance companies or associations other than life, if written premiums for the year do not exceed \$350,000	Providing insurance to members, substantially at cost
(16)	Corporations organized to finance crop operations	Financing crop operations in conjunction with activities of a marketing or purchasing association
(17)	Supplemental unemployment benefit trusts	Fiduciary agent for payment of supplemental unemployment compensation benefits
(18)	Employee-funded pension trusts (created before June 25, 1959)	Providing for payments of benefits under a pension plan funded by employees
(19)	Posts or organizations of past or present members of the armed forces	Activities implied by the nature of the organization
(21)	Black Lung Benefit Trusts	Created by coal mine operators to satisfy their liability for disability or death due to black lung disease
(22)	Withdrawal liability payment funds	Providing funds to meet the liability of employers withdrawing from a multiemployer pension fund
(23)	Associations of past and present members of the armed forces founded before 1880	Providing insurance and other benefits to veterans or their dependents
(24)	Trusts described in section 4049 of the Employee Retirement Income Security Act of 1974	Providing funds for employee retirement income
(25)	Title-holding corporations or trusts with no more than 35 shareholders or beneficiaries and only one class of stock or beneficial interest	Acquiring real property and remitting all income earned from such property to one or more exempt organizations; pension, profit-sharing, or stock bonus plans; or governmental units

NOTE: Prepaid legal service funds, described in section 501(c)(20) of the Internal Revenue Code, were no longer tax-exempt effective with tax years beginning after June 30, 1992.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

^{**}Data deleted to avoid disclosure of information for specific taxpayers. However, data are included in the appropriate totals.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$2.0 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on supporting schedules.

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$7.2 million.

⁵ Prepaid legal service funds, previously described in section 501(c)(20) of the Internal Revenue Code, were no longer tax-exempt beginning with tax years after June 30, 1992. Therefore, these organizations are not listed in this table.

NOTES: Detail may not add to totals because of rounding. See the Appendix to this article for a listing of the types of tax-exempt organizations, by the Internal Revenue Code section describing them.

Table 2.--Number of Returns, Gross Unrelated Business Income (UBI), Total Deductions, Net Income (Less Deficit), Net Income (Taxable Profit), and Total Tax, by Size of Gross UBI, Tax Year 1997

[All figures are estimates based on samples-money amounts are in thousands of dollars]

\$5,000,000 or more	190	3,571,771	190	3,145,019	169	426,752	751,482	82	241,079

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$2.0 billion.

NOTE: Detail may not add to totals because of rounding

² Includes both deductions reported on the main part of the tax return and expense items reported on supporting schedules.

³ Excludes returns with net income (less deficit) equal to zero.

⁴ Total tax is the regular unrelated business income tax after reduction by any tax credits (foreign tax credit, general business credit, prior-year minimum tax credit, and other allowable credits), plus taxes from recapture of certain prior-year credits, the "alternative minimum tax," and the "proxy" tax on nondeductible lobbying and political expenditures. The proxy tax was reported on Form 990-T and was included in total tax; however, it had no connection to the tax on unrelated business income or an organization's involvement in unrelated business activities. For exempt organizations reporting gross UBI, total proxy tax was \$7.2 million.

⁵ The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

^{*}Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ For definitions of the sources of gross unrelated business income, see the Explanation of Selected Terms section of this article.

² The gross unrelated business income (UBI) brackets of "\$1,000 under \$10,001" and "\$10,001 under \$100,000" reflect the different filing requirements for organizations with gross UBI of \$10,000 or less (only a "partial" return was required) and all other Form 990-T filers (a more detailed "complete" return was required). Organizations with gross UBI below \$1,000 were not required to file Form 990-T.

³ All organizations were required to report each income item, as shown in columns 3 through 26. However, only organizations with gross UBI over \$10,000 were required to report each deduction shown in columns 14 through 45, 48, 49, and 54 through 59 of Table 7. Income totals for these larger organizations with gross UBI over \$10,000 are shown in order to facilitate comparison with Table 7.

⁴ Property other than capital assets generally included property of a business nature, in contrast to personal and investment property, which were capital assets.

⁵ Income from real property and personal property leased with real property.

⁶ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

⁷ Annuities, interest, rents, and royalties.

^{*} Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.

¹ Excludes cost of sales and services, which was subtracted from gross receipts from sales and services in computing gross profit from sales and services. Gross profit from sales and services was a component of gross unrelated business income (UBI). Cost of sales and services can include amounts attributable to depreciation, salaries and wages, and certain other deductible items. For all exempt organizations reporting gross UBI, cost of sales and services was \$2.0 billion.

² Includes both deductions reported on the main part of the tax return and expense items reported on supporting schedules.

³ Organizations with gross UBI between \$1,000 (the filing threshold) and \$10,000 were required to report only totals for expenses and deductions (except for the specific deduction and net operating loss carryover, which all organizations reported separately). Organizations with gross UBI over \$10,000 were required to report each expense and deduction item separately, as shown in columns 14 through 45, 48, 49, and 54 through 59.

Excludes \$56.9 million of cost of sales and services reported by organizations with gross UBI of \$10,000 or less. See footnote 1 for explanation.

Excludes \$1.9 billion of cost of sales and services reported by organizations with gross UBI over \$10,000. See footnote 1 for explanation.

[°] This deduction was required to be reported as a lump-sum total only and may have included component deductions that were of the same type shown elsewhere in this table. For example, if deductions "allocable to rental income" included depreciation, then that amount of depreciation would not be included in the separately reported item, "depreciation." Therefore, the total amount shown for some of the separately reported deductions may be understated.

⁷ Reported by Internal Revenue Code section 501(c)(7), (9), and (17) organizations only.

Introduction

ll split interest trusts described in Section 4947(a)(2) of the Internal Revenue Code must file Form 5227, Split Interest Trust *Information Return*, annually to report their financial activities. A split interest trust is one that has both charitable and non-charitable beneficiaries. These non-exempt trusts function as hybrids that retain characteristics of both tax-exempt charitable organizations and private trusts. There are three main types of split interest trusts: charitable lead trusts, pooled income funds, and charitable remainder trusts (CRTs). A charitable lead trusts pays a fixed annuity to a charitable organization over a given period of time, after which the remaining interest is transferred to a non-charitable beneficiary. A pooled income fund, created and maintained by a charitable organization, pays lifetime interest income to its donors, while the remaining interest is kept by the charitable organization. Charitable remainder trusts pay a fixed dollar amount or a percentage of their assets annually to one or more non-charitable beneficiaries. These payments may be for a specified number of years or for the life of the beneficiary. Upon termination of the payments, the remaining interest is transferred to a charitable organization.

There are two primary types of charitable remainder trusts: charitable remainder annuity trusts and charitable remainder unitrusts. Annuity trusts pay their non-charitable beneficiaries a fixed amount annually. This amount is specified when the trust is established, based on the value of the assets initially placed in the trust. In comparison, unitrusts distribute to their non-charitable beneficiaries an amount determined by applying a percentage to the net fair market value of its assets each year. When both types of trusts are terminated, the remaining assets are transferred to a charitable beneficiary of the donor's choice.

In recent years, the number of charitable remainder trusts has increased rapidly. Between 1996 and 1998, the number of CRTs filing Form 5227 rose 19 percent, from 71,251 to 85,060. As the economy and the stock market experienced unprecedented growth during the 1990's, many investors sought ways to shelter record earnings from applicable taxes. CRTs

are just such a vehicle, popular in recent years because the donor receives a tax deduction applicable to the current year's income, based on the amount eventually to be given to the charitable organization.

Beginning in 1999, the Statistics of Income (SOI) Division conducted the first in what is to be a series of studies of charitable remainder trusts. Data were collected for Reporting Year 1998 from Form 5227. Returns were selected for the study based on the fair market value of the assets of the trusts. Annuity trusts whose total assets were greater than \$1.5 million, and unitrusts with more than \$3.0 million in total assets were sampled at 100 percent. Returns for both kinds of trusts whose assets were below the 100-percent sampling threshold were selected using a stratified random sample.

This section presents an article and tables from the first year of the CRT study. For 1998, approximately 85,000 returns were filed by charitable remainder trusts. Unitrusts filed 76.3 percent of the total number of returns, reporting \$8.2 billion in net capital gains (both short- and long-term), and distributing over \$4.4 billion to recipients. The remaining 23.7 percent of returns were filed by annuity trusts, which reported net capital gains of \$0.9 billion and distributions of \$0.7 billion.

Program Developments

Data from 1998 were edited using a Graphical User Interface (GUI) environment. This system, known as a "point-and-click" environment, allowed for a great deal of flexibility within the program. The study's "editors" who input return data and resolve taxpayer reporting inconsistencies were able to take advantage of the system's easily navigated layout, automated features, and quality controls. Beginning with Reporting Year 2000, the study will include data available from all types of trusts filing Form 5227 charitable remainder trusts, pooled income funds, and charitable lead trusts. Also beginning with Reporting Year 2000, the sample will be redesigned to select returns based on the end-of-year book value of total assets, which has been found to be more accurately and consistently reported by Form 5227 filers.

by Melissa J. Belvedere

n 1999, the Statistics of Income Division conducted the first of what will be an annual series of studies of charitable remainder trusts [1]. This study collected data from Reporting Year 1998, using Form 5227, Split Interest Trust Information Return. For 1998, a total of 85,060 information returns were filed by charitable remainder trusts. Of that total, 23.7 percent were filed by charitable remainder annuity trusts, which reported net ordinary income of \$0.3 billion, total net capital gains of \$0.9 billion, and distributions of \$0.7 billion. The remaining 76.3 percent of returns were filed by charitable remainder unitrusts. Unitrusts, which reported total assets at fair market value of over \$64.3 billion, earned \$1.8 billion in ordinary income, received \$8.2 billion in total net capital gains, and distributed over \$4.4 billion to beneficiaries (Figure A).

Split Interest Trust Background Information

All split interest trusts must file Form 5227, Split Interest Trust Information Return, annually to

Melissa Belvedere is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, Chief. report their financial activities and to determine if the trust is to be treated as a private foundation. A split interest trust is a trust that:

"is not exempt from tax under section 501(a)...has some unexpired interests that are devoted to purposes other than religious, charitable, or similar purposes described in section 170(c)(2)(B)...and has an amount transferred in trust after May 26, 1969, for which a deduction was allowed under one of the Code sections listed in section 4947(a)(2)" [2].

These trusts are *not formally recognized as tax-exempt* by the Internal Revenue Service, but retain many of the characteristics of tax-exempt entities. In short, they are hybrids that combine many of the features of 501(c)(3) "charitable" tax-exempt organizations with the features of simple (private) trusts [3].

There are three main types of split interest trusts: pooled income funds, charitable lead trusts, and charitable remainder trusts. A pooled income fund, created and maintained by a charitable organization, pays lifetime interest income to its donors, while the remaining interest is kept by the charitable organization. A charitable lead trust pays a fixed annuity to a charitable organization over a certain period of time, after which the remaining interest is transferred to a noncharitable beneficiary. For the purposes of this study, data were collected only for charitable remainder trusts, of which there are two types—charitable remainder annuity trusts (CRAT's) and charitable remainder unitrusts (CRUT's).

A CRAT pays a recipient a fixed amount annually, which is specified when the trust is established. The fixed amount is determined by applying a percentage to the fair market value of the net assets initially placed in the trust. The percentage that is applied must be between 5 percent and 50 percent of the initial value of the trusts. Upon the death of the beneficiary, or at the end of the term specified in the trust instrument, the assets remaining in the trust are transferred to a specified charity. Additional regulations require that the amount transferred to the charity must be at least 10 percent of the fair market value of the net assets initially placed in trust.

A CRUT is similar to an annuity trust in that the payments to a beneficiary are determined as a

¹ "Net ordinary income" is taken from Form 5227, line 13.

^{2 &}quot;Total net capital gains (losses)" is calculated as "net short-term capital gains" (line 16) plus "net long-term capital gains" (line 19).

³ "Distributions" has been calculated as the difference between "total accumulations" (sum of columns (a) through (d), line 22) and "undistributed at end of tax year" (sum of columns (a) through (d), line 23).

percentage of net assets. Unlike an annuity trust, however, annual payments are based on applying a fixed percentage (specified when the trust is established) to the fair market value of the net assets of the trust, as they are valued each

For 1998, some 20,137 annuity trusts reported total net income of almost \$1.2 billion, and distributed \$748.4 million to non-charitable recipients.

year. As with annuity trusts, the percentage applied to the fair market value of the net assets must be between 5 percent and 50 percent. The remaining assets that are donated to charity upon the death of the beneficiary must be at least 10 percent of the net fair market value of all assets initially placed in the trust.

There are two variations on the standard unitrust, both of which affect how the annual payment amount is calculated. One type of unitrust is a net income charitable remainder unitrust (NI-CRUT). A NI-CRUT is one that pays the lesser of either a fixed percentage of the fair market value of assets or the trust's actual income for the year. Under this arrangement, distribution deficiencies (when the actual income is less than the percentage amount) are not made up in future years.

The other type of unitrust is the net income with makeup charitable remainder unitrust (NIM-CRUT). This trust is identical to the NI-CRUT, except distribution deficiencies may be made up when, in future years, the percentage amount exceeds the trust's income [4, 5, 6].

Annuity Trusts

In this article, both annuity trusts and unitrusts are classified as small, medium, or large, based on the end-of-year fair market value of the trust's total assets [7]. A small trust is one whose reported fair market value of assets is less than \$500,000. This class includes those trusts that did not report the fair market value of their assets, or those that reported holding assets with zero fair market value. Mediumsized trusts are those holding assets of at least \$500,000 and less than \$3,000,000. A large trust is any trust having assets valued at \$3.0 million or more.

For 1998, some 20,137 annuity trusts filed information returns; small trusts comprised 81.8 percent, mid-sized trusts accounted for 16.0 percent, and large

trusts made up only 2.3 percent of the total. Annuity trusts reported total net income from all sources of almost \$1.2 billion. Small trusts earned 28.3 percent of this total net income, medium trusts 31.7 percent, and large trusts 39.9 percent. In the aggregate, annuity trusts distributed about 60 percent of their net income for 1998. Distributions during Reporting Year 1998 were \$748.4 million; at the end of the year, \$4.6 billion of accumulated income were left undistributed [8].

Annuity trusts report all income accumulated (undistributed) from prior years. Current net income is added to these prior-year accumulations and reported as "total accumulations." After current-year distributions are subtracted, undistributed accumulations for the end of the year are reported.

Income and Accumulations

Of the almost \$1.2 billion in total net income reported by annuity trusts for 1998, some \$316.1 million were net ordinary income, \$12.9 million were net shortterm capital gains, and \$863.0 million came from net long-term capital gains. About \$357.5 million of gross ordinary income were reported, or about 28.8 percent of total gross income. Interest income was the greatest single source of gross ordinary income for all annuity trust asset-sized groupings (as shown in Table 1 at the end of this article), except for those whose assets were between \$500,000 and \$1,500,000. Trusts in this asset category reported dividend income as their greatest source of gross ordinary income. Total accumulations of ordinary income amounted to \$592.8 million. Forty-six percent of this total was distributed in 1998 (\$270.9 million). (See Figure B for selected income and deduction items and Figure C for information on accumulations.)

By a considerable margin, the greatest source of income for annuity trusts came from net long-term capital gains. For trusts of all sizes combined, net long-term capital gains comprised 72.3 percent of total net income. After taking \$8.6 million of allowed deductions from \$871.7 million of gross long-term capital gains, net income from long-term capital gains amounted to \$863.0 million. The amounts of long-term capital gain income earned by small and medium trusts were roughly equal (\$245.2 million, or 28.4 percent of the total, and \$262.7 million, or 30.4

¹ All income information (ordinary income, net short-term and long-term capital gain income, and nontaxable income) is taken from Form 5227, columns (a) through (d) of the Accumulation Schedule.

 $^{^{\}rm 2}$ "Gross ordinary income" is taken from Form 5227, line 8.

 $^{^{\}rm 3}$ "Gross short-term capital gain income (loss)" is taken from Form 5227, line 14.

 $^{^{\}rm 4}$ "Gross long-term capital gain income (loss)" is taken from Form 5227, line 17c.

⁵"Total net income" is calculated as the sum of "net ordinary income" (line 13), "net short-term capital gain" (line 16), and "net long-term capital gain" (line 19).

² "Total accumulations" is taken from Form 5227, line 22.

 $^{^{\}rm 3}$ "Prior year undistributed income" is taken from Form 5227, line 20.

 $^{^{\}rm 4}$ "Current year income" is taken from Form 5227, line 21.

⁵ "Current year distributions" is calculated as "total accumulations" (line 22) less "undistributed at end of tax year" (line 23).

 $^{^{\}rm 6}$ "Undistributed at end of tax year" is taken from Form 5227, line 23.

percent of the total, respectively). Large trusts received \$355.2 million in net long-term capital gains, or 41.1 percent of the total. Less, percentage wise, was distributed from long-term capital gain accumulations than from any other income source; only 9.5 percent, or \$411.3 million, were distributed [9]. The \$12.9 million of net short-term capital gains represented only 1.1 percent of total net income for annuity trusts; 14.4 percent of annuity trust accumulations of short-term capital gain income were distributed.

Nontaxable income is reported by split-interest trusts only in the accumulation schedule. For 1998, annuity trusts reported gaining nontaxable income of \$60.3 million. Total accumulations of nontaxable income from 1998 and prior years were \$228.9 million, or only 4.3 percent of accumulations from all sources. Approximately \$43.9 million were distributed from nontaxable income (Figure C).

Distribution Detail

Figure D presents detailed distribution information of charitable remainder annuity trusts. From the figure, it becomes clear that, on the whole, distributions came primarily from long-term capital gains, although distributions from ordinary income were also significant, particularly for medium and large trusts. An overwhelming portion of the distributions of small trusts was funded from long-term capital gain income, a feature that set it apart from trusts in other size categories. Over 68 percent of the total distributions from small trusts were made from long-term capital gain income; distributions made from ordinary income were a distant second, comprising 24.9 percent of the small trusts' distributions. This is not surprising, as small trusts distributed almost 20 percent of their total long-term capital gain accumulations.

Distributions from long-term capital gain were a much smaller percentage of total distributions for trusts of other sizes. The total distributions of medium-sized trusts were primarily from ordinary in-

Annuity trusts' distributions came primarily from long-term capital gains and ordinary income. come (47.9 percent) and long-term capital gains (40.7 percent). Medium-sized trusts distributed over 60 percent of their total accumulations of ordinary income, whereas they distributed only 6.0

percent of long-term total accumulations.

The percentage of distributions of large trusts which came from ordinary income and long-term capital gain income were roughly similar (43.9 percent and 45.5 percent, respectively). It is important to note, however, that the distributions from ordinary income represented 33.8 percent of the total ordinary income accumulations, whereas the distributions from long-term capital gains represented only 5.2 percent of the large trusts' total accumulations of long-term capital gains.

Balance Sheet Information

As previously discussed, the payments of annuity trusts are a fixed amount, based on the value of the assets when initially placed in the trusts. Because of this payment structure, there is no compelling need to calculate the fair market value of assets annually. For this reason, annuity trusts are not required to report the fair market value of their assets and liabilities. Some annuity trusts choose to provide fair market value information regarding their assets, while others do not. For purposes of consistency in this study, data on the fair market values of assets and liabilities of annuity trusts are not collected at all. For this reason, all statistics in this section pertaining to assets, investments, and liabilities reported are book value amounts.

Annuity trusts held assets in the book value amount of \$8.6 billion in 1998. Of that amount, approximately \$7.3 billion were classified as investments [10]. Small trusts were responsible for 26.1 percent of all assets (\$2.3 billion), and roughly 26.3 percent of all investments (\$1.9 billion). Mid-sized trusts held approximately \$3 billion in assets, of which \$2.5 billion were investments; these trusts held 34.4 percent of all assets and 35.1 percent of the aggregate investments amount. In 1998, some 39.5 percent of all assets and 38.6 percent of all investments were owned by large trusts (\$3.4 billion and \$2.8 billion, respectively). The composition of assets for trusts in each size category, as well as for all annuity trusts, can be seen in Figure E.

Charitable remainder annuity trusts reported \$155.5 million (book value) in liabilities for 1998. Of this amount, small trusts accounted for \$107.6 million, medium-sized trusts accounted for \$26.4 million, and large trusts accounted for only \$21.5 million. When the liabilities of each size class are expressed as a

¹ Small annuity trusts are those having from zero (including unreported) to less than \$500,000 in fair market value of total assets

NOTE: Detail may not add to totals due to rounding and taxpayer reporting discrepancies.

For 1998, some 64,923 unitrusts filed information returns. Small unitrusts accounted for 63.8 percent of all unitrusts; medium trusts made up 31.3 percent of the total, while large trusts were 4.9 percent of the 64,923 unitrusts filing Form 5227 for 1998. Unitrusts reported \$10.0 billion of total net income in 1998. Small unitrusts earned \$1.3 billion, or 12.8 percent of this total net income; medium trusts earned \$3.2 billion (32.3 percent); large trusts earned \$5.5 billion (54.9 percent). Distributions during Reporting Year 1998 were \$4.4 billion; at the end of the year, \$34.3 billion were left undistributed.

Income and Accumulations

Unitrusts reported earning approximately \$10.0 billion in total net income in 1998. The \$10.0 billion comprise \$1.8 billion of net ordinary income, \$0.3 billion of net short-term capital gain income, and \$7.9 billion of net long-term capital gain income. For trusts of all sizes, dividends were the biggest single source of ordinary income, closely followed by interest income. Itemized data on ordinary income (losses) and net short- and long-term capital gains (losses) of unitrusts can be found in Table 4. Dividend income and interest income averaged 46.4 percent and 40.9 percent of gross ordinary income, respectively. Net

ordinary income accounted for 18.1 percent of total net income. Unitrusts accumulated \$2.7 billion, total, in 1998. Over 60 percent of ordinary income accumulations were distributed, amounting to \$1.7 billion. (See Figure F for selected income and deduction items and Figure G for information on accumulations.)

Net long-term capital gain was the largest component of total net income, ranging from 77.1 percent of total net income (for small trusts) to 80.9 percent for (medium trusts). Net long-term capital gains of \$7.9 billion were reported; gross long-term capital gain income was \$8.0 billion, and deductions allocable to those gains totaled approximately \$0.1 billion. Larger unitrusts reported much greater amounts of net long-term capital gain income than did smaller trusts. Whereas small trusts earned only \$986.5 million of net long-term capital gains (12.4 percent of the total), medium trusts earned \$2.6 billion (32.9) percent of the total), and the large trusts earned \$4.3 billion (54.6 percent of the total). Unitrusts distributed \$2.6 billion (7.5 percent) from long-term capital gain accumulations. Short-term capital gain income represented only 2.5 percent of total net income; unitrusts distributed only 6.8 percent of their accumulations of net short-term capital gains.

In 1998, unitrusts reported \$53.1 million of

² Medium annuity trusts are those having from \$500,000 to less than \$3,000,000 in fair market value of total assets.

³ Large annuity trusts are those holding \$3,000,000 or more in fair market value of total assets.

¹ All income information (ordinary income, net short-term and long-term capital gain income, and nontaxable income) is taken from Form 5227, columns (a) through (d) of the Accumulation Schedule.

 $^{^{\}rm 2}$ "Gross ordinary income" is taken from Form 5227, line 8.

 $^{^{\}rm 3}$ "Gross short-term capital gain income (loss)" is taken from Form 5227, line 14.

 $^{^{\}rm 4}$ "Gross long-term capital gain income (loss)" is taken from Form 5227, line 17c.

⁵ "Total net income" is calculated as the sum of "net ordinary income" (line 13), "net short-term capital gain" (line 16), and "net long-term capital gain" (line 19).

NOTE: Detail may not add to totals due to rounding and taxpayer reporting discrepancies.

² "Total accumulations" is taken from Form 5227, line 22.

 $^{^{\}rm 3}$ "Prior year undistributed income" is taken from Form 5227, line 20.

 $^{^{\}rm 4}$ "Current year income" is taken from Form 5227, line 21.

⁵ "Current year distributions" is calculated as "total accumulations" (line 22) less "undistributed at end of tax year" (line 23).

 $^{^{\}rm 6}$ "Undistributed at end of tax year" is taken from Form 5227, line 23.

NOTE: Detail may not add to totals due to rounding and taxpayer reporting discrepancies.

nontaxable income. When added to their prior-year un-distributed income (\$168.9 million), their total accumulations in 1998 were \$222.0 million. About \$28.2 million were distributed, or 12.7 percent of their accumulations.

Distribution Detail

One thing that is apparent from Figure H is the similarity in the composition of aggregate distributions made by small and medium trusts. The percentages of distributions that came from ordinary income were

NOTE: "FMV" is the abbreviation for fair market value.

very similar (42.5 percent for small trusts, 43.7 percent for medium trusts). Likewise, the percentages of distributions that came from net long-term capital gain income were nearly identical (54.2 percent for small trusts, 54.4 percent for medium trusts). Large trusts' distributions came primarily from net long-term capital gain accumulations (63.6 percent), while accumulations of ordinary income were also significant (34.4 percent).

As with annuity trusts, unitrusts distributed a proportion of their aggregate ordinary income accumulations that was far greater than the proportion distributed from any other source. The small and medium trust groups each distributed approximately 78 percent of their ordinary income accumulations during 1998. Large trusts collectively distributed 51.0 percent of their ordinary income accumulations. In comparison, the second largest distributions/accumulations percentage (shown in Figure H) for sources of funds within each of the asset-seized grouping other than ordinary income were only 17.8 percent for short-term capital gains of small organizations, 13.7 percent for nontaxable income of medium organizations, and 10.9 percent of nontaxable income by large trusts.

Balance Sheet Information

Charitable remainder unitrusts, unlike annuity trusts, are required to provide information on both the book value and fair market value of their assets and liabilities. As shown in Figure I, the book value of total assets held by unitrusts ranged from \$7.3 billion for small trusts to \$28.5 billion for large trusts. The fair market value of total assets was \$7.8 billion for small trusts, \$25.5 billion for medium trusts, and \$34.0 billion for large trusts. Using book values, the ratio of total investments to total assets ranged from 75.7 for large unitrusts, to 76.7 for small trusts. When the same ratio is calculated using fair market values, the range was from 70.3 for medium trusts to 88.0 for large trusts.

The percentage of a trust's investments that were held as securities was greatest for mediumsized trusts. Charitable remainder unitrusts having assets between \$500,000 and \$3,000,000 held the greatest percentage of their investments in securities (77.0 percent in book value and 78.7 percent in fair market value). Trusts with assets over \$3 million held only 65.6 percent (book value), or 69.9 percent (fair market value), of their investments in securities.

² Medium unitrusts are those having from \$500,000 to less than \$3,000,000.

³ Large unitrusts are those holding \$3,000,000 or more.

⁴ Represents "government obligations," "corporate stock," "corporate bonds," "investments-land, buildings, equipment," and "other investments."

Figure J

Coefficients of Variation for Selected Items, by Type of Trust, 1998

Item	Annuity trusts	Unitrusts		
	Coefficients of variation (percentages			
Gross ordinary income	5.48	2.21		
Total deductions to ordinary income	4.35	3.41		
Net ordinary income	6.05	2.50		
Net short-term capital gains (losses)	55.51	8.48		
Net long-term capital gains (losses)	10.55	3.70		
End-of-year total assets (book value)	4.19	0.89		
End-of-year total assets (FMV)	N/A	0.76		
End-of-year total liabilities (book value)	32.47	9.27		
End-of-year total liabilities (FMV)	N/A	5.48		

N/A--Not applicable.

NOTE: "FMV" is the abbreviation for fair market value.

The amount of total liabilities reported by trusts in each size category increased as the size of the trust increased. Small unitrusts reported book value of total liabilities in the amount of \$53.4 million, medium trusts reported \$229.6 million, and large trusts reported \$369.0 million. It is interesting that, for small trusts, the fair market value of total liabilities (\$36.6 million) was less than the book value. The liability-to-asset ratio (total liabilities divided by total assets), measured using book value, was 0.007 for small trusts, 0.012 for medium trusts, and 0.013 for large trusts. When measured using fair market value, the liability-to-asset ratio for medium trusts was less than the corresponding book value ratio.

Data Sources and Limitations

All statistics in this article are based on a sample of Forms 5227, the *Split Interest Trust Information Return*, from Reporting Year 1998. All charitable remainder trusts that are described in Internal Revenue Code section 664 and had operations during Calendar Year 1998 were required to file the form. Trusts for which 1998 was either an initial or a final year also filed Form 5227, so the sample does contain some part-year returns. The returns of charitable remainder trusts that were to be edited for this Statistics of Income study were computer-designated at the IRS Ogden Submission Processing Center after posting to the IRS Master File. The study year 1998 sample was stratified based on both the type of organization (either an annuity trust or a unitrust), as

well as the reported size of fair market value of total assets.

Charitable remainder annuity trusts were sampled at rates ranging from approximately 2.8 percent for trusts with assets of less than \$500,000 to 100 percent for trusts with assets of \$1.5 million or more. Unitrusts were sampled at rates from 1.8 percent for trusts with less than \$1.0 million in assets to 100 percent for trusts holding \$3.0 million or more in assets. After excluding returns that were selected for the sample but later rejected, the sample size was 6,471 (1,724 annuity trusts plus 4,747 unitrusts). The estimated population size was 85,060, of which 20,137 were annuity trusts and 64,923 were unitrusts. Rejected returns included those which were filed with no money amounts reported and those that were filed by a type of trust that was not an annuity trust or a unitrust. The magnitude of sampling error, measured by coefficients of variation, for selected items is shown in Figure J.

Although information from Parts III (the Current Distributions Schedule). V-A (Charitable Remainder Annuity Trust Information), and V-B (Charitable Remainder Unitrust Information) of Form 5227 was collected, it is not discussed or reported in this article due to issues of reliability. The Distribution Schedule is the portion of the return where the trust shows the accounts from which its annual distribution amounts are taken. Taxpayers report each income recipient and the amount they received from ordinary income, long- and short-term capital gains, nontaxable income, and corpus. Because of the nature of the form, it is impossible to verify the amounts reported by taxpayers in this schedule. Therefore, all distribution amounts discussed in the article, or presented in the figures represent amounts calculated from Part II (the Accumulation Schedule). Similarly, there is no method to confirm the information reported in Part V-A (Charitable Remainder Annuity Trust Information). For this reason, the data from these two sections have not been reported at this time. Part V-B (Charitable Remainder Unitrust Information) is different from the other two sections in that it is a "worksheet" of sorts, where the taxpayer is to show how the annual percentage amount to be distributed was determined. Due to the extremely poor nature of taxpayer reporting in this section, the data are considered extremely unreliable.

The samples were designed to provide reliable

estimates of total revenue. The data presented were collected from returns as they were originally filed. The data were subject to comprehensive testing and correction procedures in order to ensure statistical reliability and validity. In most cases, changes made to the original return resulting from either administrative processing or a taxpayer amendment were not incorporated into the data. A discussion of the reliability of estimates based on samples, methods for evaluating the magnitude of both sampling and nonsampling error, and the precision of sample estimates can be found in the general Appendix in this issue of the *SOI Bulletin*.

Notes and References

- [1] Data were collected from Reporting Year 1998 for charitable remainder trusts (annuity trusts and unitrusts) only. The same is true for the current study of returns from Reporting Year 1999 (an article will appear in the Winter 2001/2002 *Bulletin*). The Reporting Year 2000 study will include additional data from the other types of split-interest trusts (charitable lead trusts and pooled income funds). Data and an article containing information from all types of split-interest trusts filing Form 5227 for Reporting Year 2000 will be available in the Winter 2002/2003 *Bulletin*.
- [2] The definition of split-interest trusts was taken from the "Instructions for Form 5227," page 1.
- [3] The term "charitable" refers to tax-exempt organizations with purposes that are charitable, educational, scientific, literary, or religious in nature.
- [4] For an indepth discussion of the types of charitable remainder trusts and their uses, see "Charitable Remainder Trust Strategies... including the Full Monty CRUT," text from a presentation given by Conrad Teitell at the Washington Non-Profit Legal and Tax Conference in Spring of 2000. (Washington Non-Profit Legal and Tax Conference, Conference Proceedings Manual, Organization Management, Inc., Fairfax, VA, March 2000.)

- [5] For a detailed presentation of historical information on all split-interest trusts (including charitable lead trusts and pooled income funds) and charitable trusts, see "Charitable Trusts: An IRS Examination of Nonexempt Charitable Organizations," by Thomas B. Petska in 1983 Proceedings of the American Statistical Association, Section on Survey Research Methods, 1984 also published in Statistics of Income and Related Administrative Research: 1983, Statistics of Income Division, Internal Revenue Service, 1983.
- [6] Regardless of the type of trust that filed Form 5227, the filing of Form 1041, *U.S. Income Tax Return for Estates and Trusts*, may also have been required. Form 1041 must be filed annually by the fiduciaries of all estates and nonexempt trusts, provided the entity meets given filing thresholds. This study contains information on charitable remainder trusts only, both those that report unrelated business income as well as those that do not; the fiduciary study, however, reports data from split- interest trusts that have unrelated business income only. Statistics from Form 1041 are also presented in this issue of the *SOI Bulletin*. (See Mikow, Jacob, "Fiduciary Income Tax Returns, 1997.")
- [7] Both annuity trusts and unitrusts are discussed in terms of the size of fair market value of end- ofyear assets. When discussing the size of trusts. the fair market value of assets used is the value reported on Line C of the first page of Form 5227; the size of the trust is *not* taken from the balance sheet. This is significant because annuity trusts do not have to provide information on the fair market value of their assets on the balance sheet (unitrusts, however, are required to provide book value, as well as fair market value information). When looking at the tables at the end of this article, it appears that a higher number of annuity trusts than unitrusts have either zero or unreported assets. Often taxpayers will inadvertently leave Line C on the front page blank—if the trust in question is a unitrust, however, then the requisite information can be

gleaned from the balance sheet. No such correction is possible when an annuity trust leaves Line C blank. The tables include information from trusts whose value of assets are zero at the end of the year (both from the front page and from the balance sheet)—these trusts may be final-year filers. Final-year filers often report income, and the values of their assets at the beginning of the year.

- [8] Total distributions for Reporting Year 1998 were calculated as the difference between "Total accumulations" (Line 22) from all sources (undistributed prior-year income plus current-year net income) less "Income undistributed at end of tax year" (Line 23) from all sources. The sources of income and distributions are ordinary income, net short-term capital gain income, net long-term capital gain income, and nontaxable income.
- [9] Amounts in Figure C for "Current Year Income" may not match the amounts from Figure B because the information is taken from a different section of the return. All data re-

- ported in Figure B came from Part I of Form 5227; information presented in Figure C is taken from Part II of Form 5227, the Accumulation Schedule. The discrepancies are the result of taxpayer reporting error.
- [10] "Investments" refer to government obligations; corporate stock; corporate bonds; land, buildings, and equipment that is not held for charitable purposes; and other assets. "Securities" include government obligations, corporate stock, and corporate bonds. When "Receivables Due" are included in tables, they encompass net accounts receivable, receivables due from disqualified persons, and net other notes receivable. "Other assets" refer to cash; savings and temporary cash investments; inventories for sale or use; prepaid expenses; charitable-purpose land, buildings, and equipment; and other assets.
- [11] Data for book-valued liabilities for annuity trusts should be used with caution because of the high coefficient of variation (CV) associated with aggregate total liabilities for annuity trusts. For CV's on other data items, see Figure J.

¹ Includes returns that do not report the fair market value of their assets on the first page, or that report this amount as zero. Often, this amount is reported as zero for those trusts filing a final return. In these cases, the trusts report having assets at the beginning of the year, but nothing at the end of the year.

² Taken from "ordinary income less deductions" on line 13 of Form 5227. This amount may not equal "total ordinary income" (line 8) less "total deductions allocable to ordinary income" (line 12) due to taxpayer reporting error.

³ Taken from Form 5227, line 16.

⁴ Taken from Form 5227, line 19.

Related Papers on Nonprofit Research Using SOI Data

Introduction

his section of the Compendium contains additional papers related to the study of taxexempt organizations. The topics examined in these papers are quite diverse, yet all of the authors made use of Statistics of Income data to perform their research. Some of the papers, such as those written by Burton Weisbrod in conjunction with other authors, utilize exempt organization data for their research. Weisbrod used exempt organization data to examine different facets of the commercial activities of non-profit organizations. With Joseph Cordes, he studied the commercialization of nonprofits and researched how the prospect of tax-free income influences the behavior of non-profit organizations. Weisbrod and Segal researched the relationship between program service revenue and private donations. Similarly, Weisbrod and Okten examined the factors affecting private donations-especially government assistance and commercial activities.

Other papers do not use exempt organization data, but, instead, present research on topics relating to philanthropy. Robert Carroll and David Joulfaian

investigated the corporate income tax as it relates to corporate philanthropy. Using corporate income tax return data, they were able to judge how corporate taxes affect charitable giving, which is accorded an income tax deduction. Martha Eller examined estate tax returns, filed for decedents, to identify patterns of philanthropic giving among wealthy taxpayers. Sara Nutter presents SOI data from a study of tax-exempt private activity bonds.

The papers by Harte and Hilgert, and Stengel, Lampkin, and Stevenson, discuss methodology and process issues in collecting and improving data collection. James Harte and Cecelia Hilgert discuss the process of linking the Form 990, *Return of Organization Exempt from Income Tax*, with the Form 990T, *Exempt Organization Business Income Tax Return*, and the benefits to each study that arose from the linkage. Nicholas Stengel, Linda Lampkin, and David Stevenson discuss the development of the redesigned NTEE-CC (National Taxonomy of Exempt Entities Core Codes), their validity, and their impact on the Statistics of Income study sample of nonprofit charitable organizations.

TAXES AND CORPORATE GIVING TO CHARITY

Abstract

Corporations contribute about \$10 billion to charity annually. These transfers are accorded an income tax deduction. In sharp contrast to the numerous studies on the effects of taxation on individual philanthropy, very few studies have examined the effect of taxes on corporate giving. The evidence on such effects is scant and at best mixed. In this paper, we employ a sample of corporate income tax returns to examine the potential effects of the corporate income tax. The findings suggest that taxes are an important consideration in corporate philanthropy.

Keywords: Taxes, Firm behavior, Corporate philanthropy

JEL classification: H25, H32, M14

Helpful comments were provided by Gerald Auten, Charles Clotfelter, James Mackie, George Plesko, Laura Power, Donald Rousslang, and Karl Scholz. Views expressed are those of the authors and do not necessarily represent those of the U.S. Treasury.

1. Introduction

Corporations contribute about \$10 billion annually to charity, which primarily benefit educational, health, and cultural organizations. These transfers are tax deductible and are generally limited to 10 percent of a corporation's profits. Because of this deduction, contributions are thought to cost the U.S. Treasury about \$2 billion in foregone corporation income tax revenues. Despite this perceived tax subsidy to giving, however, few studies have examined the effects of the corporate income tax on contributions and the little available evidence is inconclusive, in sharp contrast to the extensive body of literature on individual giving.

Whether taxes influence corporate giving has interesting policy implications. If taxes do not affect charitable contributions, and given the wide variation in giving, such gifts can be viewed as a form of advertising whereby corporations maximize profits. This would suggest that the government should relax some of the present constraints on the deductibility of charitable gifts to minimize potential tax distortions in the choice between advertising and giving, since advertising is expensed. On the other hand, if taxes do influence charitable giving, then shareholders and managers may derive utility, or a "warm glow," from such gifts. In this case, the current limitation on the deductibility of gifts may seem appropriate since giving is simply consumption by a corporation's owners or managers. However, it is not at all

¹ Corporations are prohibited from contributing to religious institutions.

² See U.S. Office of Management and Budget (2001, p. 114).

³ See Randolph (1995), Steinberg (1990), and Clotfelter (1985) for a review of this literature.

clear that this tax subsidy is the most efficient way to promote this type of consumption or provide assistance to the non-profit sector.

This paper studies the determinants of corporate charitable giving with an emphasis on the effect of the corporation income tax. We employ a sample of about 30,000 income tax returns of profitable C and S corporations for the 1991 tax year, the first year when data on charitable contributions by S corporations became available. The latter account for 40 percent of all corporations and are exempt from corporate level taxes.⁴ An interesting aspect of S corporations is that, as pass-through entities, they pay taxes at the personal level, but do not pay corporate level taxes, and, thus, avoid double taxation. In contrast, C corporations are subject to a corporate level tax, with dividends taxed again upon distribution to the shareholders. Our data from administrative records help avoid the aggregation bias, measurement problems, and sample selection bias common to previous studies.

The results presented in this paper show that taxes do influence the level of corporate giving. This influence, however, is much smaller than that suggested by the time series studies but significantly greater than that reported in the cross-sectional studies. In the absence of the deductibility of charitable contribution, gift are likely to decline by 30 percent. On the other hand, if the corporate tax were to be repealed altogether, than gift may decline by about 15 percent.⁵

⁴ See Carroll and Joulfaian (1997) and Mackie-Mason and Gordon (1991).

⁵ Because our analysis incorporates corporate and personal taxes, as we discuss below, our findings are not strictly comparable to those in the existing literature which ignore personal level taxes.

In the next section, we review the literature on corporate giving. In section 3 we present the theoretical conditions under which giving violates the profit maximization model of firm behavior. Next we proceed with a description of our data. We present the empirical findings in section 4. Section 5 concludes with a summary of our findings.

2. Literature Review

Empirical studies of corporate charitable giving date back to Schwartz (1968). Using a time-series of contributions by C corporations for the years 1936 through 1961 published by the Statistics of Income Division (SOI) of the Internal Revenue Service (IRS), Schwartz regresses average contributions against the tax price of giving, after-tax income, and other variables. Depending on income definition and model specification, Schwartz reports tax price elasticities ranging from -1.06 to -2.0, and income elasticities from 0.53 to 1.34.

Schwartz's study set the research pattern for the next two decades. Nelson (1970) extends the time-series in Schwartz through 1963 and focuses on profitable firms only.

Nelson reports price elasticities ranging from -1.03 to -1.18, and income elasticities from 1.05 to 1.43. In the most recent time-series study, Clotfelter (1985) uses data from 1936 to 1980 and reports price elasticities of -0.16 to -0.4 and income elasticities of 0.11 to 0.57. Using pooled data grouped by industry, Clotfelter also obtains price elasticities ranging from -0.2 to -1.81 and income elasticities from 0.59 to 1.14; his preferred price elasticity is -0.4.

All of the above studies face a number of serious shortcomings that stem from using published SOI group data as the primary source of information. First, all are subject to the econometric problem of aggregation bias. Second, these studies are unable to account for the

upper tail truncation of observed contributions, as the deduction for charitable contributions is limited to a fraction (10 percent under current law and 5 percent prior to 1981) of net income computed before statutory adjustments and the deduction itself. Third, the published tabulations used by the authors do not provide any information on the dispersion of income for these firms. Hence, it is not possible to compute average marginal tax rates because the data aggregate corporations in low and high tax brackets, as well as fail to distinguish between corporations subject to the regular corporate income tax and those subject to the alternative minimum tax (AMT).

Some studies have overcome the aggregation problems of published SOI data by using firm level data obtained from surveys. McElroy and Siegfried (1984) study charitable giving by 229 C corporations. These authors, however, limit their study to firms that contribute to charities and ignore corporate income taxes altogether. Atkinson and Galaskiewicz (1988) focus on the effect of the ownership structure on giving, and ignore taxes as well. Navarro (1988) employs a sample of 249 firms spanning the years 1976-1982, all reporting positive contributions with no firm represented in more than one year. Using the observed effective tax rate, i.e. taxes divided by income and not the marginal tax rate, Navarro finds that taxes do not influence giving. In the latest study, Boatsman and Gupta (1996) employ a panel of 212 firms over the period of 1984 to 1988. They find a negative correlation between giving and tax rates, with an implicit elasticity coefficient of -0.35 for giving with respect to the tax rate evaluated at mean values; the implicit price elasticity is positive.

While the use of firm level data represents a major improvement over the time-series studies, these studies also have other limitations. First, they may suffer from sample selection

and survey non-response biases. Second, they do not account for upper truncation and the changes in the limit on deductibility over time. Finally, a problem common to many of the studies on corporate giving is that some of the explanatory variables, such as after-tax income or the marginal tax rate, are not or cannot be computed with reasonable precision.

3. Modeling of Corporate Giving

3.1 Theoretical framework

In modeling the determinants of corporate giving, we consider a shareholder whose utility is determined by dividends, or after-tax profits, D, and corporate charitable gifts, G. The shareholder may also view charitable gifts as a form of advertising, as they generate goodwill and provide name recognition, which may lead to higher profits. More formally, we consider a simple one-period model in which the shareholder maximizes utility given by,

$$U = U(D, G) \tag{1}$$

where D is defined as corporate profits after corporate and personal level taxes, or:

$$D = [PQ(G) - G] (1 - \tau_c) (1 - \tau_p)$$
(2)

where τ_c is the corporate marginal tax rate, τ_p is the personal marginal tax rate, and PQ is total revenue with price P and Q units which is determined by gifts, G, if it is a form of advertising.

Equation (2) may be re-written as:

$$D = PQ(G) \left(1 - \tau_c\right) \left(1 - \tau_p\right) - P_G G \tag{3}$$

or after-tax revenues less the cost of charitable gifts, where P_G is the price of giving defined as:

$$P_G = (1 - \tau_c)(1 - \tau_p) \tag{4}$$

Differentiating (1) with respect to G, the first order condition yields:

$$\partial U/\partial G = PQ_G(1-\tau_c)(1-\tau_p)U_D - P_GU_D + U_G = 0$$
 (5)

If the shareholder derives utility from giving, $U_G > 0$, and after rearranging (5), the corporation will give up to the point where,

$$PQ_G(1-\tau_c)(1-\tau_p) + U_G/U_D = P_G$$
 (6)

i.e., the point where its after-tax marginal revenue product plus the marginal utility of a gift, discounted by the marginal utility of income, equal its net of tax cost or price.

If the shareholder does not derive direct utility from corporate level giving, $U_G=0$, then a corporation will give \$1 to charity up to the point where it is equal to the marginal revenue product, or $PQ_G=1$, where profit is maximized. In this, case taxes do not affect giving and contributions may be a form of advertising.

3.2. Data

We use a sample of corporate income tax returns prepared by the Statistics of Income (SOI) division of the Internal Revenue Service. The sample consists of about 77,555 corporation income tax returns for tax year 1991. This is the first year data on S corporation giving became available.⁶

For a number of reasons, certain corporations are excluded from the sample. First, we exclude part-year returns because they may contain incomplete information on contributions and income. Second, we exclude firms without positive net income, or with losses, because nonprofitable C corporations should not report deductible contributions given the limitation on the deductibility of contributions to 10 percent of net income. The above adjustments reduce our sample to 29,088 corporations. In one variant of our model we also exclude S corporations to be consistent with previous studies, which further reduces the sample to 16,624 corporations.

The following is a brief description of each variable considered in the estimation process and their construction. As defined above, the price of giving is $(1-\tau_c)$ $(1-\tau_p)$, and reflects both corporate and personal taxes. For each corporation, we compute both the first dollar marginal tax rate and the last dollar tax rate by adding \$1,000 to charitable contributions and calculating the change in the tax liability. The statutory marginal tax rate varies from 15 percent to 34 percent for most firms. The rate is 15 percent for taxable income

⁶ Profitable C corporations contributed about \$5 billion in 1991 (see Internal Revenue Service, 1991). See Auten, Cilke, and Randolph (1992, p. 288) for a trend of corporate giving. Another \$1 billion was contributed by S corporations.

below \$50,000, 25 percent for taxable income up to \$75,000, and 34 percent for taxable income over \$75,000. Four additional features of the corporate income tax complicate the determination of the marginal tax rate. First, firms with taxable income between \$100,000 and \$375,000 are subject to a 5 percent surtax (i.e., marginal tax rate of 39 percent) to phase-out the benefit of the 15 percent and 25 percent marginal rates. The tax rate drops to 34 percent in case of income in excess of \$375,000. In the presence of the surtax, the tax rate is no longer an increasing function of income. Second, firms that pay the alternative minimum tax (AMT) face a marginal tax rate of 20 percent. Third, firms with prior year net operating losses may use them to reduce the tax liability in the current year.

An additional feature is that firms organized as S corporations face a zero corporate level tax rate as they are taxed only under the personal income tax. There is no statutory limit on the size of S corporations. Indeed, some S corporations have reported assets over \$1 billion. Unlike C corporations, however, they are restricted to 35 shareholders and are not bound by the 10 percent of income limit on gifts. Since contributions by S corporations are deductible on the personal income tax return of shareholders as itemized deductions, the consequences of a contribution cleared through personal or corporate accounts are identical; there is no tax advantage to have the corporation make the transfer.

The above features help identify the tax price elasticity.⁷ The identification problem arises because the estimated marginal tax rates may be determined by other regressors, particularly income. These features, and especially including S corporations, introduce variation in tax rates independent of income because these corporations are not subject to a corporate level tax.

For C corporations, we define the personal tax rate, $\tau_{\mbox{\tiny p}}$, as

$$\tau_p = \alpha \tau_d + (1 - \alpha) \tau_{cg}$$

where α is the dividend payout rate, and the subscripts d and cg denote dividend and capital gains, respectively. To the extent that we do not have information on shareholders, we use an average marginal tax rate τ_d of 0.256 for all individual shareholders.⁸ We also use a tax rate of 0.256 for capital gains, τ_{cg} , but reduce it to 0.14 to account for the benefit of deferrals following King and Fullerton (1984, p. 22), assuming a discount rate of 0.08 and annual realization rate of 0.10. The dividend payout rate, α , is set equal to 0.60 based on national

⁷ Feenberg (1987) provides a thorough discussion of this identification problem. A competing approach to using S corporations to help identify the tax price elasticity is to use a panel of C corporations that straddles significant changes in tax laws, for exogenous source of variation in tax rates. The most recent changes in corporate tax rates were brought about by the Tax Reform Act of 1986 (TRA). Tax rate changes, however, are usually accompanied by significant changes in the tax base, which confound the measurement of the effects of the rate changes. TRA, for instance, reduced the top rate from 46 percent to 34 percent, but concomitantly broadened the tax base by introducing the uniform capitalization rules (inventory expenses), repealing the installment sales method, scaling back depreciation allowances, and repealing the investment tax credit, among other changes. These changes more than offset the benefit of rate reductions. In other words, TRA lowered corporate marginal tax rates, but raised effective tax rates for many corporations. The complexity of many of the changes in the tax base make it very difficult to construct a consistent measure of income, as well as gauge the effects of tax rates and base broadening on the pattern of charitable contributions over time.

⁸ These are dollar weighted measures of marginal tax rates computed using 1991 US Treasury individual income tax data.

data and is exogenous to individual firm giving and tax rates.⁹ Thus, τ_p is set equal to 0.211. Because about 30 percent of corporate equity is held by tax exempt organizations, such as pension funds and charities, we set τ_p =0.1476 for C corporations.¹⁰ For S corporations, τ_p =0.297, very close to the maximum statutory personal tax rate of 31 percent in 1991.

Income is defined as net income less corporate and personal income taxes, both computed in the absence of contributions. By adding back contributions, our measure of income will be independent of the level of contributions. We also include assets to control for permanent income and the "true" ability to pay. The fourth variable we consider is advertising expenses which controls for the firm's reliance on advertising. In addition, we consider industry classifications to account for unobserved preferences for advertising.

To control for ownership and managerial structure, we include indicators for foreign ownership. We include a dummy variable whose value is one when a firm is partially owned by a foreign shareholder and zero otherwise. We also include a dummy for whether a single shareholder owns or controls at least 50 percent of the shares of the firm.

Table 1 provides summary statistics for the corporations in our sample. Column 1 shows that for the 16,624 firms organized as C corporations, the average contribution is \$37,000, with about 49 percent of the companies contributing. Only 11 firms reported

⁹ While our data contain information on firm dividends paid out, doubts about its comprehensiveness, especially in the case of the foreign owned, pre-empt us from using it. In the empirical section below, we examine the sensitivity of our estimates to the inclusion of the payout rate in the tax price measure.

When C and S corporations are combined, ignoring personal tax rates will yield an overstated measure of the tax rate differential between these two organizational forms. It will also result in an one-half reduction, in absolute value, in the price elasticity estimate for contributions, as demonstrated below. The latter, of course, is a measure computed with respect to the corporate tax rate only, as it ignores personal taxes. All previous studies ignore personal level taxes.

contributions at the statutory upper limit (10 percent of income), with another 4.4 percent reporting contributions in excess of 90 percent of the limit or over 9 percent of income. The average tax price is 0.64 using either first or last dollar measures, average after-tax income is \$2.3 million, and the average advertising expenditure is about \$0.7 million. About 6.3 percent of the firms are foreign owned. The average asset size is about \$156 million and can be as high as several hundred billions.

Column 2 and 3 of Table 1 provide summary statistics for S and the combined C and S corporations, respectively. The basic statistics reported are distinctly different from those reported in column 1. More corporations contribute even though they face a higher tax price. On average, these firms contribute smaller amounts but report smaller incomes as well, rely less on advertising, and are less likely to be foreign owned.

We should note that there are a number of non-tax variables that influence giving which we are unable to account for. These include government expenditures which may crowd out private giving, an indicator of whether a firm operates in a city with a "tithing club" where members pledge a certain fraction of their income, and a taste measure for preferred expenditures by management, such as executive compensation, among others. See Navarro (1988) for an excellent discussion.

4. Results

4.1 Basic Statistics

Table 2 provides statistics on the pattern of giving for C and S corporations differentiated by the size of these firms. Beginning with C corporations, we find that the

relative frequency rises with the asset size. About 48 percent of firms with assets under \$50 million contribute compared to 56 percent for those with assets between \$50 million and \$1 billion, and 73 percent for the larger corporations. For each of the three asset classes, we observe a lower tax price for those who contribute than those who do not. This suggests that giving, in part, may be influenced by the taxes that each firm faces. We also observe higher income and advertising expenditures for those firms that give. The latter, not only report greater advertising expenditures but are also more likely to advertise as well.

Using asset size, a similar pattern is also observed for S corporations, except that these firms give with a greater frequency. About 57 percent of firms with assets under \$50 million contribute compared to 88 percent for those with assets between \$50 million and \$1 billion. Because the tax price for these S corporations is invariant to giving, as they are exempt from corporate level taxation, their giving pattern is not influenced by the tax system.

When compared to C corporations, S corporations give with greater frequency; 57 percent versus 48 percent for firms with assets below \$50 million, and 88 percent vs 56 percent for the larger firms. Relative to income, S corporations with assets under \$50 million give slightly less than their C counterparts (15/832 vs 7/328). In the case of the larger firms, however, S corporations seem to be more generous. These findings muddy the picture that emerges from studying C corporations alone; it is no longer clear that giving is influenced by taxes. To shed light on the underlying relationship between giving and taxes, we next turn to multivariate analysis.

4.2 Multivariate Estimates

Charitable contributions are truncated at high and low values. There is a minimum contribution of zero and a maximum contribution limit (U) equal to 10 percent of income for C corporations. Hence, we model contributions, G, as:

$$G^* = \beta x + u \tag{8}$$

where G* is a latent variable. The observed contributions, G, our dependent variable, is:

$$G = 0$$

$$= G^* \quad \text{if } 0 < G^* < U$$

$$= U \quad \text{if } G^* \le U$$
(9)

In the presence of upper and lower limits on contributions, we employ two-limit Tobit to estimate equation (10). We model contributions as a log-linear function of the variables described in section 3, controlling for ownership and control. The results are reported in Table 3.

The first set of estimates in Table 3 is restricted to C corporations in an attempt to replicate the current literature, followed by that of C and S corporations combined in column 2. For C corporations, the coefficient on after-tax income is positive with an estimate of 0.79 and standard error of 0.05. The implied income elasticity coefficient is 0.44, evaluated at mean values. The elasticity estimate is within the range of the findings in time-series studies. Contributions also rise with advertising. The estimated coefficient is 0.4 for an implied

elasticity of 0.22. This indicates that contributions rise with a firm's reliance on advertising, consistent with the pattern observed in Table 2.¹¹

The coefficient for the indicator of foreign ownership is negative suggesting that less is given by foreign owned firms. The estimated coefficient is -3.94 which indicates that on average foreign owned corporations give 78 percent less than domestic firms.

The coefficient of the first dollar tax price, our variable of interest, is estimated at - 3.69 with standard error of 0.53. This implies an elasticity of -2.3 for giving with respect to the tax price, again evaluated at mean values. This estimate is in the upper range of elasticities reported in times-series studies and is in variance with the evidence of zero effect of taxes on giving reported in cross-sectional data.

While the first dollar tax price is exogenous, it can be argued that it is not the theoretically correct measure. The last dollar tax price, on the other hand, is arguably the theoretically correct but endogenous measure. However, given the width of the taxable income brackets, it should make little difference which measure is employed. To verify this, we re-estimate the Tobit equation using the last dollar tax price. The estimated coefficient is -3.0 with an implied elasticity of -1.9, slightly smaller than the earlier estimate, with all the remaining coefficients unchanged. 13

¹¹ A qualitatively similar result is found when advertising expenditures are replaced with its share of sales.

¹² See Reece and Zieschang (1985) and Randolph (1995).

¹³ This is further confirmed using a maximum likelihood procedure following Blundell and Smith (1986). We regress the last dollar tax price against the first dollar tax price and the remaining regressors in Table 2 without income. The Tobit model is re-estimated with the regressors augmented by the residual from the tax rate equation. The results show that the estimated coefficient for the residual is not significantly different from zero.

All of the above corporations face positive tax rates. As such, and notwithstanding the above results, we may never be able to adequately measure the effects of the corporation income tax on giving by relying solely on data for C corporations. In addition, the estimates obtained above are likely to be subject to the identification problem. Fortunately, and as discussed earlier, we are able to consider the behavior of S corporations which are exempt from the corporate level tax. In effect, and as a control group, S corporations offer an opportunity to better measure the importance of the corporation income tax in determining charitable giving behavior.

Column 2 of Table 3 replicates the estimates in column 1 but this time for the combined sample of C and S corporations. The results for the combined data are generally similar to those reported for C corporations except for the tax price. The estimated coefficient on the latter is -1.48 with a standard error of 0.36. This implies an elasticity of about -0.91, ¹⁴ well below the estimate for the sample of C corporations above. This estimate is in the lower range of time series estimates, but greater than that in cross sectional studies. Note, however, that because we consider personal level taxes, our results are not strictly comparable to those in the literature, which only consider the corporate level tax. ¹⁵ The sign and significance of these coefficients are inconsistent with the profit maximization model. If giving is purely a

¹⁴ Using the last dollar tax price measure, the estimated coefficient becomes -1.10 for an implied elasticity of -0.68.

¹⁵ Our estimate of the price elasticity becomes -0.4 when personal taxes are omitted, as demonstrated below.

form of advertising, and profit maximization is the objective, then the estimated coefficients should not be significantly different from zero. 16

The large reduction in the estimated price elasticity, in absolute value, suggests that studies limited to the behavior of C corporations are likely to overstate the responsiveness of corporate giving to the corporation income tax. The bias is likely to be significant, as demonstrated above, where the price elasticity changes from -2.3 to -0.9. This highlights the significance of the identification problem discussed earlier whereby the estimated coefficient on the tax price may reflect both the price and income effect.¹⁷

The above estimates have significant implications for modeling the effects of changes in the tax treatment of corporate giving. If the deductibility of corporate charitable contributions is repealed, one would expect to observe a reduction of gifts by 29 percent for C corporations, all else equal (i.e., only the tax price matters). On the other hand, if the corporate tax were repealed, corporate giving would only fall by 14 percent (i.e., both the tax price and income matter). In both cases, the tax price rises to $(1-\tau_n)$, and only personal taxes matter.

Our estimate of a lower price elasticity coefficient hinges on the crucial assumption that S corporations represent an adequate control group. One potential criticism of using S corporations as a control group, however, is that these firms are generally viewed as smaller and not directly comparable to C corporations. To check on the robustness of the above

¹⁶ In an alternative experiment, we regress advertising expenditures on the regressors in Table 3. For C corporations the estimated coefficient on the tax price is positive with a value of 2.98 and standard error of 0.40. For the combined C and S corporation sample the estimated coefficient is 0.44 with a standard error of 0.30, is not significantly different from zero as predicted by the profit maximization model.

¹⁷ Note that the simple correlation coefficient for income with respect to the tax price is -0.65 in the sample of C corporations, and -0.39 in the combined sample of C and S corporations.

results, we limit C corporations to those with similar size to the S corporations in our sample. More specifically, we exclude C corporations with assets in excess of the largest S corporation in our sample (about \$890 million) and re-estimate equation 2 of Table 3. The estimated coefficient on the tax price for this subsample of firms, as reported in Table 4, is 3.85 with standard error of 0.54 for C corporations, and -1.48 with a standard error of 0.36 for the combined sample of C and S corporations, virtually identical to the earlier results. The estimates of the coefficients for the remaining variables remain unaffected as well.

Another potential criticism of using S corporations as a control group is that these firms may be different from C corporations in ways we are unable to control for, or that corporations that have a strong preference for giving may organize as S corporations despite the tax advantages of organizing as a C corporation instead.¹⁹ Therefore, and as a further check on the robustness of the above results, we augment the regressors with a dichotomous variable which takes the value of 1 for S corporations and re-estimate equation 2 of Table 3. The estimated coefficient on the tax price, reported in Table 4, for this specification is -2.67, with a standard error of 0.43, significantly higher, in absolute value, than the earlier estimate, for an implied elasticity of -1.7. The estimates of the coefficients for the remaining variables, including income and except for the constant, are little affected.

The complete set of estimates, not reported, is available upon request. The restricted sample of C corporations contains 16452 firms with average contributions, size of assets, income, all in thousands, and tax price (first dollar) of 7.7, 16813, 727, 0.6429, with standard deviations of 68772, 63577, 5811, and 0.0836 respectively. The combined sample of C and S corporations contains 28916 firms with average contributions, size of assets, income, all in thousands, and tax price (first dollar) of 11.1, 14189, 821, 0.6688, with standard deviations of 93187, 52413, 4941, and 0.0697 respectively.

¹⁹ Such a proposition would be based on the assumption that S corporations are not profit maximizers as owners derive utility from giving, thus pre-judging the outcome of our paper. However, the primary reason a corporation elects the S status over the C status is to maximize after-tax profits.

Last, and in order to be consistent with the past literature, the tax price is computed without regard to personal level taxes. For the sample of C corporations, the estimated tax price coefficient, reported in Table 4, is -3.69, with a standard error of 0.53, identical to the estimate in column 1 of Table 3. The estimated coefficient on the tax price for the combined sample of C and S corporations is -0.65, with a standard error of 0.23, about one half the estimate in column 2 of Table 3. The estimated coefficient on income and the remaining variables, as well, remain unaffected in the two samples. Note that the estimated price elasticity for the combined sample is -0.4, but in contrast to the earlier estimates, is computed using corporate tax rates only; changes in the deductibility of contributions has implications similar to those reported earlier.

5. Conclusion

This paper studies the determinants of corporate charitable giving with an emphasis on the effect of the corporate income tax. We employ a sample of about 30,000 firms comprised of C and S corporations for tax year 1991. Our data help us avoid the aggregation bias and measurement problems common to time-series studies as well as the selection bias and survey non-responses plaguing studies that rely on survey data.

The results show that corporate philanthropy declines with the tax price and rises with income and advertising. They also show that foreign owned firms give the least. The finding that corporate charitable contributions are price sensitive suggest that the profit maximization model does not fully explain the pattern of corporate giving.

Future research should expand our study by focusing on a number of issues. These include differences between transitory and permanent effects as well as the contribution of gifts to firm performance overtime.²⁰ Longitudinal data on C and S corporations may help address these issues.

²⁰Judging from the finding in Randolph (1995), which examines individual giving, one would expect the transitory effect to be large and the permanent effect to be small.

by Martha Britton Eller

Philanthropy is based on voluntary action for the common good. It is a tradition of giving and sharing that is primary to the quality of life.

American Association of Fund-Raising Counsel

INTRODUCTION

n February 1999, the philanthropic community lost one of its most outstanding members—billionaire and lifelong benefactor Paul Mellon. He was named the 124th-wealthiest American by Forbes magazine in 1998. and his seemingly endless inter vivos contributions to charitable causes spanned many fields of interest, from the Pittsburgh Symphony Orchestra to the preservation of Cumberland Island, Georgia. Less than a year after Forbes' 1998 ranking, Mellon bequeathed \$75 million in cash and more than 100 paintings to the National Gallery of Art, as well as several million dollars to numerous other public causes [1]. The death of this great philanthropist and the charitable giving sustained throughout his life compel us to examine the patterns of charitable giving among the affluent, an important segment of the charitable donor population.

The federal estate tax data collected by the Statistics of Income Division (SOI) of the Internal Revenue Service (IRS) provide a unique glimpse into the charitable bequest patterns of wealthy Americans such as philanthropist Paul Mellon. According to SOI data. charitable bequests by wealthy decedents reached \$10.1 billion in 1995, about 7.0 percent of the \$143.9 billion in total charitable giving for 1995, as estimated by the AAFRC Trust for Philanthropy [2]. A decedent's estate is required to file a federal estate tax return, Form 706, if the value of gross assets, at death, exceeds the filing threshold in effect at the date of death. For year of death 1995, the focus in this article, the estate tax filing threshold was \$600,000 in gross assets. Gross assets, deductions from gross estate, including the charitable deduction, and tax computation information are reported on the federal estate tax return, making the return a rich source of data on wealthy taxpayers.

Martha Britton Eller is an economist with the Special Studies Special Projects Section. This article was prepared under the direction of Michael Alexander, 714 Chief. As part of SOI's annual estate tax study, the source of statistics provided here, detailed data on gross charitable contributions, or bequests, by estate tax decedents are collected. Estate tax decedents are defined as all decedents for whom estate tax returns are filed. In the course of the estate tax study, each charitable contribution is assigned to one of six contribution categories, and each category describes a general activity performed by qualifying charitable institutions. Categories include: education, medicine and science; religion; social welfare; private foundations; arts and humanities; and other, a category for a wide range of activities, such as public safety, housing, and environmental quality, as well as activities not classified elsewhere.

THE 1995 ESTATE TAX DECEDENT POPULATION

Internal Revenue Code (IRC) section 2055 states that the "value of the taxable estate shall be determined by deducting from the value of the gross estate the amount of all bequests, legacies, devises or transfers" to qualifying charitable institutions, including organizations which conduct religious, charitable, scientific, literary, and educational activities, among others. For year of death 1995, the population of estate tax decedents included 14,283 individuals who, upon their deaths, contributed to a broad spectrum of charitable organizations recognized by the Internal Revenue Service under IRS section 2055. Charitable contributors who utilized the charitable deduction in 1995 represented 18.3 percent of the overall estate tax population that included 78,023 decedents, and they bequeathed \$10.1 billion in gross contributions to qualifying charities (Figure A). The deduction reduced the combined taxable estate by more than \$9.7 billion and represented 16.2 percent of total allowable deductions taken by 1995 decedents. The discrepancy between combined gross charitable contributions, \$10.1 billion, and the combined charitable deduction. \$9.7 billion, is a product of estate tax law that disallows use of the charitable deduction for federal estate, generationskipping transfer, and State death taxes paid out of funds designated for a charity.

Figure A

1995 Estate Tax Decedents, Selected Items

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Item	Amount
Total gross estate, date of death ¹	136,296,004
Total gross estate, tax purposes ²	136,138,678
Charitable bequests, total	10,117,929
Charitable deduction, total	9,703,375
Spousal bequests, total	40,919,708
Total allowable deductions	60,076,194

¹ Gross estate shown at value on date of death.

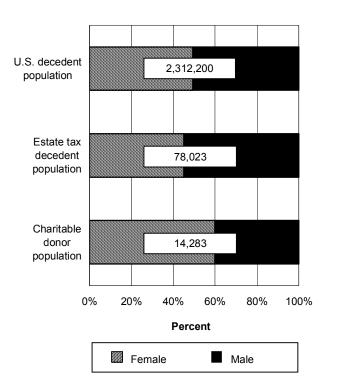

In addition to charitable transfers to qualifying organizations, unlimited marital transfers, administrative expenses, indebtedness, taxes, and casualty losses are also deductible against gross estate, under IRC sections 2053, 2055, and 2056. For 1995 estate tax decedents, total allowable deductions exceeded \$60.0 billion. The deduction for bequests to charitable organizations, \$9.7 billion, was the second largest combined deduction against gross estate, exceeded only by the deduction for marital transfers. Transfers to surviving spouses, also fully deductible under federal estate tax law, totaled \$40.9 billion, or 68.1 percent of total allowable deductions. More than half of all 1995 estates, 53.1 percent, were nontaxable (i.e., they reported no estate tax liability), while 46.9 percent were taxable (i.e., they reported an estate tax liability).

Since the contributors described in this paper were members of the larger estate tax decedent population, fully understanding the subset of contributors requires an examination of the wealthy estate tax decedent population as a whole, which included 78,023 individuals who died in 1995 with gross estates at or above the estate tax filing threshold of \$600,000. While the estate tax decedent population has grown significantly in recent years, incurring a 29.9 percent increase between years of death 1992 and 1995, it is still only a small fraction of both the U.S. living and decedent populations. Estate tax decedents represented less than 1.0 percent of the total U.S. resident population in 1995, according to the U.S. Census Bureau, and the deaths of estate tax decedents represented only 3.4 percent of all deaths that occurred among resident Americans during 1995, according to the U.S. National Center for Health Statistics [3].

While the entire U.S. decedent population is about equal parts male and female, the population of estate tax decedents was comprised of a male majority. The deaths of males made up 50.7 percent of all U.S. deaths in 1995, and female deaths were about 49.3 percent of all deaths (Figure B). In contrast, male decedents represented 54.9 percent of the estate tax decedent population in 1995, while female decedents represented only 45.1 percent of that population. Despite their lesser presence in the entire estate tax decedent population, females were the majority of charitable contributors. Only 40.1 percent of the donor population was male, while 59.9 percent of the donor population was comprised of wealthy females. Of course, marital status at death plays a role in this finding. The majority of female estate tax decedents are widowed—with no spouse as a potential heir—and therefore more likely to contribute to charity. The majority of male estate tax decedents are married.

Figure B

U.S. Decedent, Estate Tax Decedent, and Charitable Donor Populations, by Sex, 1995

² Gross estate shown at value used in tax computation, either date-of-death value or value on alternate valuation date.

In terms of financial well-being, the combined total gross estate, or wealth accumulated, for 1995 estate tax decedents was \$136.3 billion (Figure C). However, their combined net worth, defined as gross assets less liabilities (debts and mortgages), better represents the funds available for charitable donations. Combined net worth for wealthy estate tax decedents who died in 1995 totaled \$130.5 billion. Overall, then, estate tax decedents' charitable contributions, \$10.1 billion, represented 7.8 percent of their combined capacity to donate.

The estate tax decedent population increased by 29.9 percent between 1992 and 1995, and decedents' combined total gross estate increased by 30.5 percent between these years. Total net worth grew about the same as total gross estate, 30.3 percent between the two years. The charitable donor segment of the estate tax population increased by less than the estate tax population as a whole, with growth barely exceeding 27.0 percent. Gross charitable contributions increased by 19.4 percent between 1992 and 1995, while contributions as a percentage of net worth for all decedents remained largely unchanged, around 8.0 percent for both years. Charitable contributions as a percentage of net worth for donors decreased only slightly, from 28.8 percent in 1992 to 28.0 percent in 1995.

MOTIVES FOR PHILANTHROPIC GIVING

The motives for philanthropic giving are varied and complex and reflect the "range of cultural and philosophical underpinnings of this country" [4]. It would be an insurmountable task to construct a definitive list of possible motives for giving to charity, since an individual's decision to give may be rooted in tradition, in tax incentives, or in myriad possibilities between the two. The wide range of motives for giving is reflected in the diverse areas of study that have examined it, including sociology, psychology, economics, and finance. Over time, though, broad values and motives for giving by wealthy donors have been identified.

To be sure, this is vastly uncharted area for economists, who, as Auten et al. (1997) point out, are not accustomed to dealing with the question of motivation, preferring instead to "limit their attention to the effects of changes in prices and income" [5]. While measurable variables of labor supply, savings, consumption, lifetime gifts, lifetime contributions, and charitable bequests—those variables more familiar to economists—are valuable and certainly impact the decision to give, the "question of motivation in this context is both interesting and significant" [6]. By necessity, much of the work in this area is qualitative research.

Boris (1987) reported the results of the Foundation Formation, Growth and Termination Project, in which a series of interviews and surveys were conducted with wealthy philanthropic donors and their surrogates. Questions probed the reasons for giving, and results indicated that "giving private wealth for public purposes was based on values as diverse as religious heritage, personal philosophy, social responsibility, political beliefs, peer pressure, and egoism" [7].

Odendahl (1988) examined the findings of a joint Yale University, Program on Nonprofit Organizations/ Council on Foundations study in which in-depth interviews were conducted with American millionaires, active in both local and national networks of philanthropists. According to Odendahl, "charitable giving and voluntary activities allow the rich to control nonprofits, provide them with many benefits, and set them apart from the masses" [8]. Odendahl further suggested that "(t)hrough their philanthropy, the wealthy support up-

² Net worth is calculated as total gross estate less debts and mortgages. Negative values of net worth are constrained to zero.

per-class institutions that reproduce the ruling class" and that the "political economy of giving allows moneyed elites, rather than elected representatives, to exercise great leadership and control" [9].

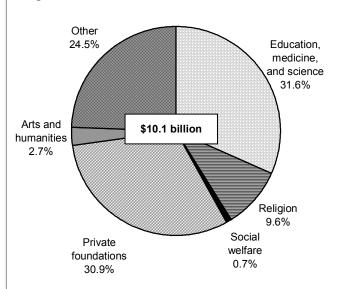

Schervish et al. (1986) set out to conduct intensive interviews with a selected sample of 125 wealthy individuals and experts on philanthropic trends. The researchers offered a definition of philanthropy, the "voluntary or non-legislatively mandated accumulation and distribution of resources to meet unfulfilled needs and interests" [10]. With respect to their theory of wealth and philanthropy, Schervish et al. suggested that the "most telling characteristic of philanthropy when conjoined to wealth is its potential to actively create the public agenda by directly producing the institutions capable of achieving that public agenda" [11]. In fact, the authors further suggested, "the wealthy, for good or for ill, for progressive or conservative ends, actually produce (rather than simply run or influence) the organizational world at the cutting edge of society" [12].

These and a few other studies, primarily qualitative in nature, set out to identify motives for philanthropic giving. While charitable bequest data collected by SOI do not directly contain information on individuals' motives for giving, the allocation of decedents' funds, in the aggregate, speaks indirectly to the motives for giving. Wealthy estate tax decedents who died in 1995 contributed \$10.1 billion to charitable organizations and charitable activities that they deemed important. These donors gave, on average, to 1.7 types of organizations, including organizations involved in education, medicine, and science; religious organizations; social welfare organizations; private foundations; and various other qualified organizations.

The largest combined contribution, almost \$3.2 billion, went to educational, medical, and scientific organizations and represented 31.6 percent of gross charitable contributions (Figure D). More than half of all contributors in 1995, 51.1 percent, gave to these types of charitable organizations. The second largest combined gift, \$3.1 billion, went to private foundations and represented 30.9 percent of gross charitable contributions. The bequest to private foundations was left by 980 decedents, a mere 6.9 percent of charitable contributors in 1995. Large, aggregate contributions to

Figure D

Charitable Bequests by Type of Recipient Organization, 1995

these top two categories of organizations reveal what Boris (1987) called the "roots of philanthropy," including civic responsibility, scientific philanthropy, and social responsibility.

Wealthy individuals who give with civic responsibility as their motive "believe in an educated citizenry, {and} thus tend to fund institutions that promote equality through education," while wealthy Americans who espouse scientific philanthropy support "basic research in the physical and social sciences" in order to expand our knowledge and solve society's problems [13]. Donors with the latter motivation view the funding of research at universities and other organizations as a "primary way of contributing to the betterment of society" [14]. Donors who are motivated by a sense of social responsibility view their wealth as an obligation, according to Boris. And, as such, these contributors "hope to provide opportunities for others to make good" [15].

Giving to private foundations also underscores several of the motives discussed by Boris and Odendahl, from social responsibility to egoism. After all, most private foundations are established by gifts from a single family or individual rather than from a large number of contributors, and many foundations

bear the name of the contributing family, forever preserving an individual's, or family's, role in society. By establishing and maintaining private foundations, the wealthy, as Schervish et al. (1986) pointed out, actually produce the organizational means to achieve a preferred public agenda. Private foundations typically do not themselves conduct charitable activities but rather make grants to other charitable organizations that conduct such activities.

Disparate bequest patterns among estate tax decedents signal a wealth-based difference in motivations for giving, as preferences for charities vary by gross estate class. The smallest estates split the majority of their money and assets between educational, medical, and scientific charities, 36.1 percent of their gross contributions, and religious charities, 29.3 percent of their contributions, while the largest estates overwhelmingly prefer to give to private foundations, 48.5 percent of their gross contributions (Figure E). The largest estates gave just 21.1 percent of their contributions to educational, medical, and scientific charities and only 2.5 percent of their contributions to religious charities.

[All figures are estimates based on samples--money amounts are in thousands of dollars]

Across gross estate categories, however, charitable donors most frequently selected religious organizations as charitable recipients, with about 8,400 contributions reserved for religious activities, a combined gift of more than \$970.4 million. The religious motive, as this finding suggests, is an important one and one with "tremendous historical importance" [16]. After all, "since the earliest times, religions have played a major role in the supply and demand of welfare public goods," and "religion influences the tastes of the individual and provides a selective incentive for him to contribute" [17].

BEQUEST PATTERNS BY DEMOGRAPHIC GROUPS

Bequest Data by Sex

Charitable bequest data extracted from federal estate tax returns reveal limited sex-based differences in the propensity to give, as well as limited sex-based preferences for types of charitable recipients. Female

¹ Gross estate shown at value on date of death

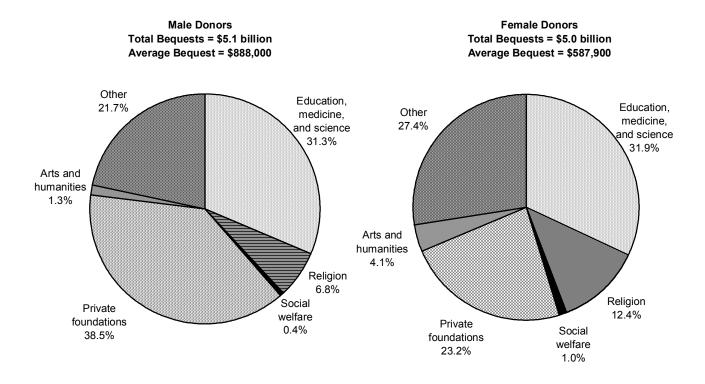

decedents in the 1995 estate tax population gave to charity with greater frequency than male decedents, as 24.3 percent of female estate tax decedents gave to charity, while only 13.4 percent of male decedents contributed. Of course, marital status at death probably plays a substantial role in this finding, since the majority of female estate tax decedents are widowed, while the majority of male estate tax decedents are married. With no spouses to designate as beneficiaries, widowed women more frequently designated charities as recipients of their estates. Despite the de facto difference in propensity to give, women and men gave comparable aggregate bequests, with women contributing \$5.0 billion and men contributing \$5.1 billion (Figure F). Although women gave more frequently, men gave more substantial gifts, on average. Male donors contributed, on average, about \$888,000 to charity, and female donors contributed, on average, about \$587,900 to charity. In terms of net worth, however, female donors contributed a slightly larger share of their net worth, 29.3 percent, compared to male donors, who contributed

26.8 percent of their net worth to charity.

In terms of contribution amounts, men, in the aggregate, gave the largest percentage of their gross contributions, 38.5 percent, to private foundations. Total contributions to private foundations exceeded \$1.9 billion, even though only 8.2 percent of male contributors, 470 males, left bequests to such charities. The second largest bequest by men went to educational, medical, and scientific organizations and totaled \$1.6 billion, representing 31.3 percent of gross contributions by men. In contrast with bequests to private foundations, given by only 8.2 percent of male contributors, almost 57.0 percent of male contributors left bequests to organizations in this category. The third largest aggregate contribution went to organizations in the "other" category, a combined contribution of \$1.1 billion, or 21.7 percent of men's gross contributions. The "other" category includes organizations that perform a wide range of activities, such as public safety, housing, and environmental quality activities, as well as activities not classified elsewhere.

Figure F

Charitable Bequests, by Sex of Donor and Type of Recipient Organization, 1995

About 43.0 percent of male contributors provided money and assets to these organizations.

Women's priorities in giving were, to a limited degree, different than the priorities of their male counterparts. Female contributors gave the largest percentage of their gross contributions to organizations that conduct educational, medical, and scientific activities. The combined bequest to such institutions, given by about 47.5 percent of female contributors and similar in magnitude to the bequest by males, totaled \$1.6 billion. The bequest represented 31.9 percent of women's gross contributions. The second largest bequest by women, \$1.4 billion, went to organizations in the "other" category. That contribution represented 27.4 percent of women's total contributions and was bequeathed by 45.6 percent of female contributors. Private foundations were the recipients of females' third largest contribution. Private foundations received almost \$1.2 billion in funding, a bequest that represented 23.2 percent of women's aggregate contributions. Only about 6.0 percent of female contributors left bequests to private foundations. Compared to their male counterparts, women gave a much smaller percentage of their total contributions to private foundations and, instead, dispersed remaining funds among other types of organizations. Compared to men, women gave larger percentages of combined bequests to every type of recipient organization, with the exception of private foundations.

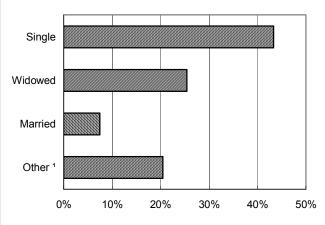

Bequest Data by Marital Status

Charitable bequest data extracted from federal estate tax returns suggest that an individual's marital status at death influences his or her inclination to leave a beguest to charity. Compared to decedents in other marital status categories, single decedents were most likely to bequeath portions of their estates to charity, with 43.3 percent of single decedents making charitable bequests (Figure G). Widowed decedents were the second most philanthropic group, as they contributed to charity in 25.4 percent of all cases. The least philanthropic group, in terms of number of donors, were married decedents. Only 7.4 percent of all married decedents contributed to charity. Of course, this finding is explained by the presence of surviving spouses who may be designated as beneficiaries and by the availability of the marital deduction, which was claimed by 97.2

Figure G

Charitable Donors as a Percentage of Estate Tax Decedents, by Marital Status, 1995

Marital status

Percent of all estate tax decedents

percent of married decedents. For all gross estate categories, decedents with surviving spouses left, on average, more to their surviving spouses than to charity. The overall average charitable bequest by married decedents was about \$779,500, while their average spousal bequest was almost three times that amount, a little more than \$2.3 million. Therefore, when faced with the decision to give to charity or transfer property to surviving spouses, married decedents provided more liberally for surviving spouses.

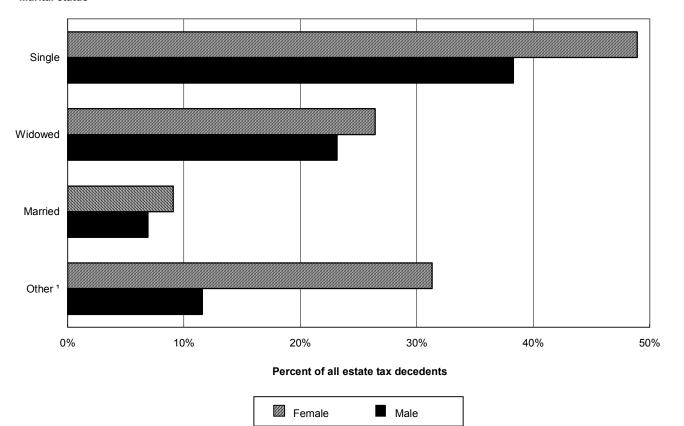

In looking at both the marital status and sex of 1995 decedents, single female decedents and single male decedents were most likely, among all estate tax decedents, to give money and other assets to charitable organizations. Top givers, in terms of frequency, were single female decedents, who gave in 48.9 percent of cases (Figure H). Single male decedents, second in terms of the percentage who contributed, gave in 38.3 percent of cases. Female decedents in the "other" category—decedents who were separated, divorced or marital status unknown at date of death—were the third most philanthropic group, with 31.3 percent of those decedents giving to charity.

¹ "Other" includes legally separated, divorced, and marital status unknown.

Figure H

Charitable Donors as a Percentage of Estate Tax Decedents, by Marital Status and Sex, 1995

Marital status

¹ "Other" includes legally separated, divorced, and marital status unknown.

In terms of monetary contributions, widowed females and widowed males together gave about 53.0 percent of total charitable bequests in 1995, or \$5.4 billion (Figure I). Widowed females, top givers among all contributors, donated \$3.7 billion, and widowed males gave more than \$1.6 billion. Of course, the larger number of widowed females relative to the number widowed males contributed to this finding. On average, widowed females gave only \$640,800 to charity, while widowed males gave about \$718,400. Married male decedents contributed \$1.9 billion, the second largest contribution in terms of aggregate bequest size. However, it should be noted that the top four charitable donors in the married males category significantly increased the total contribution from the category as a

whole. With these top male donors removed from the analysis, married males contributed \$1.1 billion to charity, a contribution that falls below the contribution by widowed male decedents. In terms of net worth, single donors contributed the largest percentage of their net worth to charity, 44.7 percent.

Bequest Data by Age

Age at death also affects a decedent's likelihood to contribute to charity, according to bequest data for 1995 estate tax decedents. Decedents who were 90 and older were most likely to contribute to charity. More than a third of these decedents, 37.9 percent, made contributions (Figure J). The second most philanthropic

group were decedents between 80 and 90, with almost 21.0 percent of these decedents making charitable bequests. The least philanthropic group were those decedents between 50 and 60. Only 6.0 percent of these decedents contributed to charity. Those decedents under 50 contributed to charity more frequently than decedents between 50 and 60.

Decedents between ages 80 and 90 outnumbered other age groups in the donor population. Those donors comprised the largest percentage, 40.3 percent, of all contributors, and they donated \$4.4 billion in gross contributions, the largest aggregate bequest by age group (Figure K). The second largest group of contributors were those ages 90 and older, representing

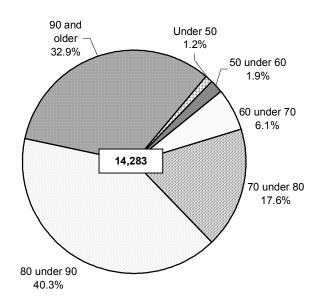

Figure J Figure K

32.9 percent of the pool of contributors. These oldest decedents contributed \$3.5 billion to charitable organizations and activities. The smallest group of contributors were younger than 50, with only 1.2 percent of all contributors in that age bracket.

Relatively young decedents and those in the oldest age group contributed most generously to charities during 1995, in terms of giving as a percentage of net worth. While the two groups were separated by at least four decades, both planned, in similar fashion, to give money and other assets to charitable functions at death. Contributors between ages 50 and 60, who comprised only 1.9 percent of the donor population, bequeathed the

largest percentage of their combined net worth, 49.7 percent (Figure L). The second most benevolent group were contributors 90 and older. These oldest decedents contributed 32.2 percent of their combined net worth to charity.

Bequest Data by Size of Gross Estate and Net Worth

While wealthy decedents who died in 1995 were an important source of funding for charitable activities, the very wealthy were unmatched in their level of giving. Estate tax decedents in the top gross estate category, "\$20 million or more," contributed \$4.4 billion, or 43.7 percent of charitable bequests in 1995 (Figure M). The aggregate bequest by these top wealth holders was the largest overall bequest. Of the 359 decedents in the top category, less than 1.0 percent of the total estate tax decedent population, about half, or 182 individuals, bequeathed a combined contribution that exceeded \$4.4 billion. The second largest charitable bequest, in terms of gross estate size, was given by decedents in the gross estate category "\$1 million under \$2.5 million." The 5,206 contributors, 18.6 percent of all estate tax decedents in that category, gave almost \$1.7 billion to charity.

As expected, average charitable bequests increased with the size of gross estate. The average bequest to charity ranged from \$135,600 for decedents in the "\$600,000 under \$1 million" gross estate category to \$24.3 million for decedents in the "\$20 million or more"

¹ Gross estate shown at value on date of death.

category. Similarly, charitable bequests as a percentage of gross estate increased with size of gross estate, with decedents in the top gross estate category, "\$20 million or more," giving 20.3 percent of their combined gross estate to charity. In every gross estate category, spousal bequests as a percentage of gross estate were larger than charitable bequests as a percentage of gross estate. For all decedents, charitable bequests represented 7.4 percent of combined gross estate, while spousal bequests accounted for 30.0 percent of combined gross estate. Overall, then, decedents give more generously to surviving spouses compared to charities.

Again, it is often useful to examine charitable giving in terms of net worth, defined as total gross estate less liabilities (debts and mortgages), since net worth may more closely measures a decedent's capacity to give. In terms of net worth, donors, overall, contributed 28.0 percent of combined net worth to charities (Figure N). Charitable donors in the top net worth category, "\$10 million or more," contributed \$5.2 billion, 51.8 percent of total charitable bequests and 35.7 percent of their combined net worth, the largest percentages contributed by 1995 donors. As expected, as net worth increased, the percentage of net worth bequeathed to charity increased, from about 17.8 percent for net worth category "Under \$1 million," to 35.7 percent for the top wealth holders.

EFFECTS OF THE CHARITABLE DEDUCTION

Just two years after the inception of the modern federal estate tax, the Revenue Act of 1918 introduced a

Figure N

¹ Net worth is calculated as total gross estate less debts and mortgages. Negative values of net worth are constrained to zero.

charitable deduction that would effectively reduce a decedent's taxable estate. Under the Act, any transfers of property to qualifying charitable organizations are fully deductible from the value of an estate. During the decades since the 1918 Act, the economic efficiency, merit and propriety of the deduction, as an incentive for planned giving by wealthy taxpayers, have been discussed at substantial length. Moreover, growing reliance on the nonprofit sector to perform major social functions that might not otherwise be performed and the sector's reliance on contributions from outside sources add to the weight of such discussions. The role of nonprofit organizations, in education, health, the arts and, human services, make charitable bequests, as well as the ability of the charitable deduction to encourage those bequests, a matter of public policy importance [18].

While no one argues that the federal estate tax structure, specifically, the charitable deduction available within that structure, is the primary determinant of charitable bequests, it is often asserted that the deduction is a significant determinant of such bequests. The deductibility of contributions in the calculation of net estate tax liability effectively reduces the price of giving to charity relative to the price of giving to non-charitable donees, making charitable bequests more attractive to the wealthy individual whose estate may be required to file a federal estate tax return. This effect, called the tax price effect of giving to charity, is typically expressed as (1-x), where x is the marginal tax rate. For example, at the 39 percent marginal tax rate, the relative price of bequeathing another dollar to charity rather than to non-charitable heirs is \$.61, or (1-x), since \$.39 (or \$x) in taxes are saved by doing so. However, the estate tax levied on non-charitable bequests also reduces the amount of after-tax wealth. This tends to reduce charitable contributions. As a result, the net effect of the estate tax on charitable giving is, in theory, ambiguous.

Charitable giving data collected by SOI may be used to examine the relationship between the charitable deduction and charitable bequests by wealthy decedents. Figure O shows the number of decedents who face each of the marginal tax rates in the estate tax rate schedule. Marginal rates are shown as applied to adjusted taxable estate (after deductions are subtracted from total gross estate and adjusted taxable gifts are

55 percent	985	3.047	32.3

NOTE: 37 percent is the lowest marginal tax rate faced by taxable estates due to the unified credit

added to taxable estate). In general, the percentage of the decedent population that contributes to charity increases as the marginal tax rate increases. That is, as the price of giving, (1-x), decreases, a greater percentage of decedents chose to give to charity. While charitable contributors represent only 20.3 percent of the entire decedent population at the 37 percent tax rate, 32.3 percent of the entire decedent population contributed to charity at the 55 percent tax rate. Of course, due to the progressivity of the federal estate tax structure, decedents in the highest tax brackets also have the greatest wealth. These top-wealth decedents have more funds available both for charity and for non-charitable heirs.

A number of studies have explored the relationship between the federal estate tax and charitable bequests. Joulfaian (2000) described several such studies, conducted over the last three decades, and summarized the findings on the tax price effects, or tax price reduction, of charitable bequests. Using federal estate tax data for decedents who died in 1992, Joulfaian also explored issues related to identifying the estate tax price effects on giving as separate from the effects of wealth. He found that the estate tax deduction has a significant effect on charitable transfers and seems to be "budget" efficient, in that giving is stimulated by more than the loss in federal tax revenue. However, as stated above, the estate tax has only a modest effect on giving, since the tax reduces terminal wealth and thereby lessens the

stimulative effect of the price reduction. Overall, Joulfaian suggested that, in the absence of the estate tax, charitable bequests might decline about 12.0 percent [19]. For 1995, such an estimate would indicate a decline of \$1.2 billion in charitable bequests by wealthy estate tax decedents.

Others have discussed the ability, or limited ability, of the charitable deduction to create funds for public purposes. Westfall (1970) described several possible scenarios if the estate tax charitable deduction, but not the tax itself, were completely repealed:

To the extent that donors would maintain their level of after-tax charitable giving, the deduction is wholly wasted as a tax incentive for such gifts. To the extent that donors would merely reduce their gifts by the amount of the increased estate tax, the policy question is whether the amount of the increase can be better spent by the recipient charities or by the federal government. Only to the extent that donors would react by reducing their charitable gifts by more than the amount of the tax increase is there a net loss in funds available for public purposes as a result of a denial or restriction of the deduction [20].

Finally, Westfall suggested that "it seems probable that many death-time charitable transfers are made simply because the decedent is more interested in giving to charity than in giving to any other potential beneficiaries" [21]. Therefore, he concluded, the "deduction may cost more in lost estate tax revenues than it produces in charitable gifts that would not otherwise be made" [22].

One of the ascribed roles of the federal estate tax, often cited as a merit of the tax, is the reduction of concentrated wealth in the United States. According to this view, the wealth held by those at the top of the wealth distribution is redistributed to those throughout the distribution. Embracing this as a merit of the federal estate tax, Bittker (1976) suggested that the unlimited charitable deduction contributes to the estate tax's role in moderating the concentration of family wealth. According to Bittker, "by encouraging {individuals} to make charitable bequests, the deduction helps to dis-

perse wealth among a larger group" [23]. Indeed, he continued, "{the deduction} may outperform the tax itself in this respect, since some {individuals} may reduce their transfers to family members in order to make deductible bequests to charitable institutions" [24]. These institutions then pass the wealth along to others—the less fortunate—in the form of tangible and nontangible transfers.

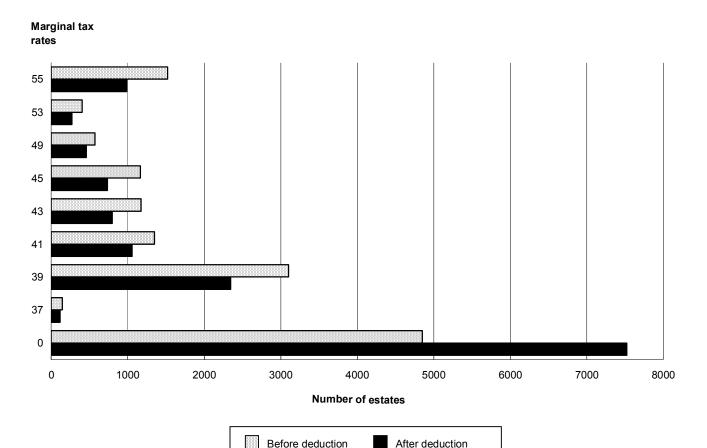

In another study that examined the merit of the charitable deduction, Joulfaian (1991) identified the deduction's ability to generate funds for use by philanthropic organizations. Using 1986 estate tax decedent data, he examined the impact of federal estate tax rates on the size and diversification of charitable bequests. He found that "higher estate tax rates raise the size of

charitable bequests of all categories," including arts and humanities; religion; education, medical, and scientific research; social welfare; foundations; and, other types of organizations. He also found that the "estate tax and the deductibility of bequests lead to a diversification in giving" [25].

Figure P again shows the number of 1995 estates that utilized the charitable deduction at each marginal tax rate. In this figure, the solid bar represents the number of estates at the actual rates faced by 1995 contributors, that is, after the charitable deduction has been utilized in the calculation of adjusted taxable estate (the "after case"). The dotted bar represents the number of estates at marginal rates faced by estates in the absence of, or before utilization of, the unlimited

Figure P

Marginal Estate Tax Rates, Before and After the Charitable Deduction, 1995

charitable deduction (the "before case"). The values described by the dotted bar were derived by applying the tax rate schedule to hypothetical values of adjusted taxable estate, calculated as actual adjusted taxable estate plus charitable bequests. In both the before and after cases, the State death tax credit was calculated at each tax rate, based on the value of the adjusted taxable estate, either hypothetical or actual. Beginning at a marginal estate tax rate of 37 and continuing throughout the upper portion of the tax rate schedule, the number of estates at each rate is higher under the before case. That is, there is a shift from relatively lower rates under the after case to relatively higher rates under the before case. This suggests that, all else equal, there is a benefit to utilizing the charitable deduction, and that benefit is a lower marginal tax rate.

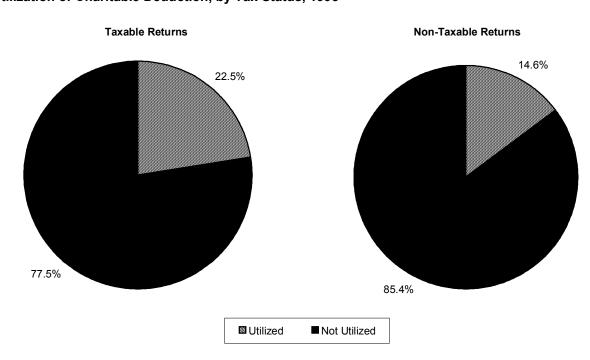

Another way to examine the effects of the charitable deduction is to compare taxable estates, those with reported estate tax liability, to nontaxable estates, those with no reported estate tax liability. Estate tax data for 1995 seem to indicate that decedents give to charitable

organizations for reasons beyond simply reducing their taxable estates and eliminating reported tax liabilities. While 22.5 percent of taxable returns utilized the charitable deduction as a means to reduce taxable estates, only 14.6 percent of nontaxable returns utilized the deduction (Figure Q). Compared to nontaxable estates, more taxable estates gave to charity. However, nontaxable estates gave a larger percentage of total gross estate to charity. For all 1995 decedents, nontaxable estates contributed 8.0 percent of their total gross estate to charity, while taxable estates contributed only 6.5 percent of their total gross estate.

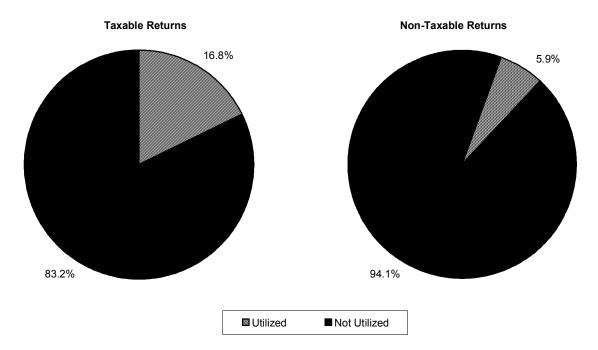

Since married decedents may reduce their taxable estates with the unlimited marital deduction and the unlimited charitable deduction, it is illustrative to examine the charitable giving behavior of these decedents. Similar to the entire population of 1995 estate tax decedents, taxable estates of married decedents gave to charity more frequently than nontaxable estates. Only 5.9 percent of all married decedents with nontaxable estates utilized the charitable deduction, while 16.8

Figure Q

Utilization of Charitable Deduction, by Tax Status, 1995

Utilization of Charitable Deduction, Married Decedents, by Tax Status, 1995

percent of all married decedents with taxable estates claimed a charitable deduction (Figure R). However, nontaxable estates for married decedents claimed the deduction for spousal bequests in 98.4 percent of all cases, while taxable estates for married decedents claimed the deduction for spousal bequests in 89.7 percent of all cases.

CONCLUSION

Figure R

Since Congress passed the Revenue Act of 1918, a deduction from gross estate has been available to estate tax decedents who, at their deaths, bequeath money or other assets to qualifying charitable organizations. The estate tax charitable deduction has provided wealthy decedents with the opportunity both to support charitable causes and to reduce the amount of net estate tax liability owed to the federal government. The deduction was originally introduced as a means to elicit bequests to charity. In the years following the 1918 Act, the economic efficiency and social merit of the estate tax and the charitable deduction have been topics of public discourse.

In 1995, 78,023 individuals died with gross estates at or above the federal estate tax filing threshold of \$600,000. And, of that population, 14,283 decedents contributed funds to organizations in the philanthropic community, from youth development organizations, such as Girl Scouts of the U.S.A., to large, grantmaking private foundations, such as the Ford Foundation. Estate tax decedents' combined beguest, \$10.1 billion, represented about 7.0 percent of the \$143.9 billion in total charitable giving from all sources for 1995, as estimated by the AAFRC Trust for Philanthropy. Gross charitable contributions increased by 19.4 percent between 1992 and 1995, while contributions as a percentage of net worth for all decedents remained largely unchanged, around 8 percent for both years. Charitable contributions as a percentage of net worth for donors decreased only slightly, from 28.8 percent in 1992 to 28.0 percent in 1995.

Sex, marital status, and age predict the likelihood of contributing to charity, as well as the generosity of contributions. In terms of sex and marital status, single female decedents were most likely to contribute to

charity, while widowed females, in the aggregate, contributed most generously to charity, \$3.7 billion. However, on average, widowed females contributed only \$640,800, while widowed males contributed about \$718,400. In terms of age, decedents 90 and older most frequently gave to charity, while decedents between 80 and 90 comprised the largest percentage of all contributors and donated the largest aggregate bequest by age group, \$4.4 billion.

Motives for philanthropic giving are varied and complex and are based on diverse values that include religious heritage, personal philosophy, social responsibility, political beliefs, peer pressure, and egoism. For 1995 decedents, educational, medical, and scientific organizations received the largest share of charitable contributions, 31.6 percent. The total contribution to such organizations was almost \$3.2 billion. The second largest contribution, \$3.1 billion, went to private foundations and represented 30.9 percent of gross charitable contributions.

Numerous studies have explored the relationship between the federal estate tax and charitable bequests. According to one estimate, in the absence of the estate tax, charitable bequests might decline about 12.0 percent. For 1995, such an estimate would indicate a decline of \$1.2 billion in charitable bequests by wealthy estate tax decedents.

In 2000, the U.S. Congress passed legislation that would have gradually eliminated the federal estate tax over the following decade. President Bill Clinton vetoed that legislation. After the presidential and congressional elections of 2000, as President George W. Bush took office, public discussion about the estate tax and its effect on bequests to philanthropic organizations was refueled. During his first year in office, President Bush signed the Economic Growth and Tax Relief Reconciliation Act of 2001, which included measures to repeal the estate tax. Under the new law, the estate tax filing threshold is gradually increased to \$3.5 million in 2009, and the tax is completely repealed as of January 1, 2010. However, without further legislation to make the repeal permanent, the estate tax will reappear on December 31, 2010, because of a legislative provision in the new law. And so, the exact fate of the federal estate tax is anything but certain, as the political composition of the White House and Congress will likely change during the next decade.

Enriching One Sample While Improving Another: Linking Differently Stratified Samples of Documents Filed by Exempt Organizations

James M. Harte and Cecelia H. Hilgert, Internal Revenue Service

ax-exempt organizations are in the nonprofit sector, as economists call it. This sector is increasingly important, having doubled in the last 15 years. In testimony before the Congress (June 1993), the Commissioner of the Internal Revenue (IRS) noted that the public charity part of the nonprofit sector had revenues in excess of \$400 billion for 1990, representing 7.4 percent of the gross domestic product. Some of the organizations also conduct for-profit business activities. Linkage of the data from profit-making activities with the nonprofit side is important for policy analysis from the tax-exempt organization point of view and from the point of view of their profit-seeking competitors. This paper is about such a linkage.

The Statistics of Income (SOI) Division of the Internal Revenue Service (IRS) conducts projects each year sampling documents filed by individuals and organizations under tax law, namely the Internal Revenue Code (IRC) [See reference 1]. These include documents filed by tax-exempt organizations engaging in charitable, educational, religious and other nonprofit activities. Taxexempt activities are usually reported on Form 990. The SOI Form 990 sample represents six of the twenty-five types of nonprofit organizations filing the document. Another sample is of the Form 990T, the tax return covering business activities unrelated to the tax-exempt purpose. The SOI sample covers any type of tax-exempt organization. (See the Appendix for a brief description of selected types of tax-exempt organizations. In addition, references 2 and 3 provide sources of information on the organizations.)

Starting with the samples covering the 1993 activities (documents filed in 1994 and 1995), the Form 990 SOI sample is to be enriched. Form 990T data are to be added to the Form 990 sample record if a T return was filed. These T returns are to come from the separate T sample and be an integral part of it, if possible. This requirement seemed analogous to feeding the multitude with a few

loaves and fishes, as the following comparison shows (estimates for 1992):

	Form 990	Form 990T
Population:	273,000	42,000
Sample:	20,000	5,000
Concept:	6 Types	Any.

We wished to preserve the broad representative character of the T sample without increasing the target sample size unduly. The extra T's needed for the match might crowd out other T's needed to represent the broad T population. Also wished were a sample selection and an estimation method which made the best use of all sample units. Excluding the extra T's from the estimates seemed unsatisfactory. Including them as a self-representing sample stratum might not be much better. We had no data to judge feasibility. A feasibility study matching the 1988 samples was conducted. The study used a special method of estimation available for SOI samples.

For the 1993 sample, a method of selection based on cross-classifying organizations by information on each document was adopted. From these joint strata samples will be selected. Additional returns needed to enrich the Form 990 database will be secured through a higher sampling rate in the joint stratum whenever the T sampling rate based on income alone is too low. For estimation there are no additional returns since no distinction is made in calculating the estimates. The rest of the paper discusses the feasibility study, presents the 1993 design, and concludes with evaluation, notes and references, and the Appendix.

■ Section 1 - The 1988 Feasibility Study

Strategy

The joint distribution of organizations with documents in either sample was estimated. Using the joint distribu-

tion, the 1988 T sample was hypothetically augmented with the extra returns needed to complete the match with the Form 990 sample. This augmented sample was compared with the actual sample, providing a point of view to initially discuss and assess the feasibility issues of sample size, representativeness and sampling error.

Form 990 Sample

The sample population is divided into two parts: (1) returns from organizations exempt under subsection 501(c)(3) of the Internal Revenue Code; and (2) returns from those exempt under subsections 501(c)(4) through (c)(9). (See Exhibit 1.) Returns with less than \$25,001 in gross receipts, the threshold for required filing, are excluded. Each part is stratified by size of assets, but the size categories differ. These size categories, in use since 1988, are part of the detail of Table 1. More recently, smaller organizations may file a short Form 990EZ. For sampling purposes, no distinction is made between the short form and the longer form.

Form 990T Sample

The 1988 sample of this income tax return was stratified based on the size of net unrelated business income. All returns with income \$100,000 were selected, while samples were drawn from four strata with smaller amounts. Starting with the 1992 sample, gross unrelated business income replaced net income as the stratifier. Table 1 from the 1988 study uses the newer gross income classes. Estimation was based on the 1988 net income stratification.

Sample Selection

Selection of documents from each stratum is actually based on selection of the organizations filing the documents. This is true of SOI samples, generally [4]. Each organization has an account number, the Employer Identification Number (EIN). From the EIN, a function is computed, yielding an integer with many digits. The low order digits are pseudo-random numbers. Each organization is assigned a permanent random number from the low order digits. The decision to include an organization's document in the sample from a stratum depends on whether its random number is less than some constant associated with the stratum. A hypothetical example: suppose the last three digits of the integer function are used as random numbers. Then, a sampling rule might be

"include the document if the random number is less than 100. Otherwise, do not include it." This rule would be expected to yield a 10 percent sample for the stratum. Furthermore, if the document was included under this rule for a 10 percent sample, then any other document filed by the organization in a different sample would be included whenever the sampling rate is 10 percent or more.

Estimation and Matching

Define AB as the event that documents from the same organization have been included in stratum A of sample 1 and stratum B of sample 2, respectively. Stipulate that pr[A] =< pr[B], which are the individual probabilities of inclusion in each sample. The inclusion probability for both documents is denoted by pr[AB], and pr[B/A] denotes the conditional probability that B will be included, given that A has been included. Generally,

(1) pr[AB] = pr[A] * pr[B/A]

but, in SOI sampling

(2) pr[B/A] = 1

Consequently,

(3) pr[AB] = pr[A].

This means that estimates from matching at the sample level may be derived from the inverse of the probability of selection. In practice, data files from the 1988 samples of Form 990 and Form 990T were compared. When a match on the EIN was detected, a joint record was created. Each one of the pair had a weight from the original sample. In making estimates for Table 1, the higher of these two weights was applied. This method was considered reasonable for producing counts but not for financial estimates.

Joint Population

Table 1 classifies the population of organizations by asset size from Form 990 and by gross income size from Form 990T. Fifty-five percent of the Form 990T population was from organizations represented by the SOI Form 990 sample: 15 percent from c(3) organizations and 40 percent from the c(4) through c(9) types of organizations.

The Augmented Sample

To the joint population classes the sampling rates for Form 990 were applied whenever they were larger than the actual T rates. Nationally, this produced a larger

sample in which the match with the 990 sample was complete. To the actual sample of about 7,000 returns, an additional 1,500 would have been required to augment the sample and complete the match with the Form 990 sample. About 2,800 of the required matching T's were in the actual sample. A comparison of the augmented and actual sample is as follows:

	Augmented	Actual	Additional
	Sample	Sample	Sample
501(c)(3)	1,823	1,141	682
501(c)(9)	2,500	1,652	848
All other	4,201	4,201	0
Totals	8,524	6,994	1,530.

These results gave us a basis to believe that our objectives were feasible. If the sample had been absorbed rather than augmented, then the additional sample of 1,530 returns would have crowded out other returns, but the "all other returns" category totaled 4,201.

Section 2 - SOI 1993 Sample Design

First, the Form 990 sample was designed, since the T sample had to conform to it. Population projections to 1993 were made as usual for the sample strata. For (c)(3) returns a sample of 11,500 was allocated among the strata, while 8,500 returns were allocated to the c(4) through (c)(9) returns. (Formerly, equal allocations were made between these two groups.)

Next, an initial version of the T sample was made, as if there were no requirement to serve the other sample. Population projections were made to gross income strata which had been established for the 1992 project. A sample of 5,000 was allocated paralleling the allocation made for 1992. This determined minimum sampling rates.

The 1993 population projections for the T returns and for Form 990 returns were the estimated marginal totals for the joint distribution of the population represented by one or both of the SOI samples. The internal cells of the joint distribution were prorated from the marginals, following Table 1 from the 1988 feasibility study. To each asset-income stratum the higher of the T rate or the Form 990 rate was applied, yielding an augmented sample of about 6,500 returns. This was scaled back to 5,500 returns by lowering and flattening the rates for income

classes of \$60,000 under \$300,000. It was required to take all returns with \$300,000 or more into the sample. The final sampling rates for Form 990 and Form 990T are given in Table 2. For joint strata, the larger of the two rates will be applied, except for where Form 990T returns with gross income of less than \$1,000 where no sample is selected [5]. Table 3 contains the projected population counts for Form 990T, while Table 4 contains the projected allocation of the sample to the joint strata.

■ Section 3 - Evaluation

The allocation of the 1993 sample is compared with the 1992 allocation:

	1992	1993
Total	5,000	5,500
SOI 990 filed	3,500	4,500
No SOI 990 filed	1,500	1,000

The 1,000 returns with No SOI 990 filed includes an estimated 500 returns with gross income of \$300,000 or more, the take-all category. This motivated the increase in the sample target from 5,000 to 5,500 returns. The domain estimates for organizations filing both returns will be improved because of the increased sample size and the deeper stratification. The estimates for the domain of returns not covered by the SOI sample will have larger sampling error because of the smaller sample size. Neither of these domains is of great interest. Most estimates should be improved. The general representativeness of the T sample was preserved.

Effective use will be made of all returns because of joint stratification, assignment of permanent random numbers to organizations, and the flexible threshold rule for deciding inclusion in the sample.

■ Acknowledgments

The authors would like to thank Dan Skelly for his technical comments on this paper, Wendy Alvey and Beth Kilss for their review and assistance in the presentation of the material at San Francisco, and Paul Arnsberger for his technical assistance with the paper. Earlier, Elizabeth Nelson and Stephanie Hughes had worked on the 1988 feasibility study.

- [5] Where gross income was less than one thousand dollars, no return was required. Many of the documents filed were claims for refund and considered outside the scope of the sample.

Appendix

Exempt Activities: Forms 990 and 990EZ

Historically, Congress has accorded special privileges to organizations that engage in nonprofit activities for public or for group benefit. The exemption from the corporate income tax, as well as the deduction from income allowed to contributors to public benefit organizations have been the major fiscal incentives provided to encourage such activities. The Internal Revenue Code classifies tax-exempt nonprofit organizations into 25 groups.

Those exempt under Code section 501(c)(3) receive tax-deductible donations and are the largest providers of philanthropic goods and services. They include organizations with purposes that are religious, charitable, education, health-related, or scientific, or are for the purpose of testing for public safety. The Statistics of Income program now collects data on these organizations and six other types defined under sections 501(c)(4) through 501(c)(9) of the tax code. (See the exhibit for a brief description of these organizations.)

An increased demand for data on the nonprofit sector has come from various sources in recent years:

- Congress, which is confronting increasingly controversial policy issues, such as the proper tax treatment of commercial activities and limits on lobbying.
- ☐ The Internal Revenue Service, to facilitate administration of tax laws.
- ☐ Nonprofit sector leaders, faced with declining government support and tax law changes which reduce the tax advantages to giving.
- ☐ Academic researchers, showing an increased interest in the behavior of the nonprofit sector.

Nonprofit organizations with annual gross receipts greater than \$25,000 are required to file Form 990, Return of Organization Exempt from Income Tax, which provides income statement and balance sheet information. (Although religious organizations are among the section 501(c)(3) group, they have never been required to file returns, but some do to provide information to their donors.) It is the principal source of data on nonprofit organizations and is required by the majority of states. A copy of an organization's Form 990 must be available for public inspection at the site of the organization.

The Statistics of Income (SOI) Division has been conducting studies of nonprofit organizations based on Form 990, with results published in the *SOI Bulletin*. They have been done on an annual basis since 1982 (with the exception of 1984). For 1989, Form 990EZ was introduced for smaller organizations, those with annual gross receipts of less than \$100,000 and total assets of less than

\$250,000 at end of year. These studies, which are based on samples of returns, include all financial data, as well as most of the non-financial information on the returns.

Taxable Activities: Form 990T

Prior to 1950, exempt organizations could earn tax-free income that was unrelated to the purpose for which they were exempt, as long as they used the net profits for exempt purposes. However, in response to a perception that tax-exempt organizations were permitted an unfair advantage over their private sector counterparts, Congress established the unrelated business income tax. This tax is imposed on the income that tax-exempt organizations earned from a trade or business not substantially related to the organization's exempt purpose or function. The law's purpose was to restrict the potential for unfair competition between nonprofit organizations and the taxable for-profit businesses that provide the same services. With

Federal cutbacks in funding for social programs in more recent years, there has been a major focus on the movement of exempt organizations into commercial activities and the resulting impact of this movement on for-profit businesses.

Beginning with 1987, SOI started annual studies of exempt organizations with unrelated business income. Organizations with UBI are required to file Form 990-T if they have \$1,000 or more of unrelated business income. The annual studies are currently based on sample sizes of approximately 5,000 returns. Beginning with 1993, the Form 990T data of organizations in the Form 990/Form 990EZ sample will be included in that study's database, permitting policy and economic analysis of exempt and nonexempt activities at the micro level for the first time. The data will also be retained for the separate Form 990T study and be fully useful.

Exhibit 1. Selected Types of Tax-Exempt Organizations, by Internal Revenue Code Section

Code section	Description of organization	Type of activities
501(c)(3)	Religious, charitable, educational, scientific or testing for public safety	Activities of nature implied by class or organization
501(c)(4)	Civic leagues, social welfare organizations, and local associations of employees	Promotion of community welfare, charitable, educational and recreational activities
501(c)(5)	Labor, agricultural and horticultural organizations	Educational or instructive, the purpose being to improve conditions of work, and to improve products and efficiency
501(c)(6)	Business leagues, chambers of commerce, real estate boards, etc.	Improvement of business conditions of one or more lines of business
501(c)(7)	Social and recreational clubs	Pleasure, recreational, and social activities
501(c)(8)	Fraternal beneficiary societies and associations	Lodge providing for payment of life, sickness accident or other benefits to members
501(c)(9)	Voluntary employees' beneficiary associations	Provides for payment of life, sickness, accident or other benefits to members

by Sarah E. Nutter

ore than \$441.8 billion of tax-exempt private activity bonds were issued during the period 1988 through 1995. The vast majority of these bond issues were long-term (i.e., maturities of 13 months or more). The \$430.1 billion of long-term tax-exempt private activity bonds issued during this period were nearly evenly split between new money issues (50.5 percent) and refunding issues (49.5 percent). About 40 percent of the \$217.3 billion of new money long-term tax-exempt private activity bonds issued during this period were to benefit entities exempt from income tax under Internal Revenue Code section 501(c)(3). This article includes data on tax-exempt private activity bonds for the period 1988 through 1995, with particular emphasis on data for 1995 [1]. Data on private activity bonds that are not tax-exempt are not included in this article.

Legislative Background

Since the inception of the modern-day Federal income tax in 1913, an income exclusion from income subject to tax for interest received by holders of debt obligations (i.e., bonds) of States and their political subdivisions has been included in Federal income tax law [2]. This provision, which is in section 103 of the Internal Revenue Code of 1986, now disallows the application of this general exclusion for "private activity bonds" that are not "qualified bonds," and "arbitrage bonds."

These restrictions on the application of the general interest exclusion for State and local debt obligations began in 1968 with the passage of the Revenue and Expenditure Control Act (Public Law 90-364). In general, the restrictions are intended to limit the use of the exclusion provision in instances where the bond proceeds are not used for a public purpose or the issuers are exploiting arbitrage opportunities. The interest exclusion for arbitrage bonds, which are bonds whose proceeds are used to acquire higher yielding investments, was initially eliminated in 1969 [3].

Although additional limitations were added, particularly during the early 1980's, the Tax Reform Act of 1986 restructured the treatment of tax-exempt

private activity bonds and added more stringent requirements relative to their issuance. In particular, the 1986 Act tightened the definition of private activity bonds by reducing from 25 percent to 10 percent: 1) the portion of the proceeds of a governmental bond that could be used by a non-governmental person in a private trade or business, and 2) the portion of the issue that may be secured by property, or payments in respect of such property, used in a private trade or business. The combination of such use and security in excess of 10 percent is what results in a bond being characterized as a "private activity bond."

Several other restrictions introduced or expanded under the Tax Reform Act of 1986 included limitations on the purposes for which tax-exempt private activity bonds could be issued, imposition of State volume limitations (i.e., volume caps), restrictions on advance refundings, and further restrictions on arbitrage. In brief, the 1986 Act further reduced the purposes for which tax-exempt private activity bonds could be issued; these bonds could no longer be used to finance private property such as sports stadiums, convention and trade show facilities, parking facilities, and private pollution control facilities. A single unified annual volume cap was imposed, limiting the annual amount, by State, of most tax-exempt private activity bonds. The annual volume cap, for the years covered by this article, equaled the greater of \$50 per capita or \$150 million [4]. States were allowed to carry over any unused portion of the volume cap of a particular year for 3 years. Advance refundings were prohibited with respect to all private activity bonds, except for 501(c)(3) bonds, which were allowed one advance refunding. Finally, rebate requirements, which, with limited exceptions, generally require arbitrage profits on tax-exempt bonds to be rebated to the Federal Government, were expanded to include nearly all tax-exempt bonds.

Currently, private activity bonds may still be taxexempt if they meet certain criteria and fit within one of the categories of "qualified bonds" under Code section 141(e). Qualified bonds, termed tax-exempt private activity bonds in this article, include "exempt facility bonds," mortgage bonds, veterans' mortgage bonds, small issue bonds, student loan bonds, redevelopment bonds, and section 501(c)(3) bonds. The major types of exempt facility bonds are bonds issued for airports; docks and wharves; facilities for

This article was written by Sarah E. Nutter, an Assistant Professor at George Mason University.

the furnishing of water; sewage facilities; solid waste disposal facilities; and qualified residential rental projects. Section 501(c)(3) bonds are issued by State and local Governments to finance the activities of charitable and similar organizations that are tax-exempt under Code section 501(c)(3). The primary beneficiaries of these bonds are private, nonprofit hospitals, colleges, and universities.

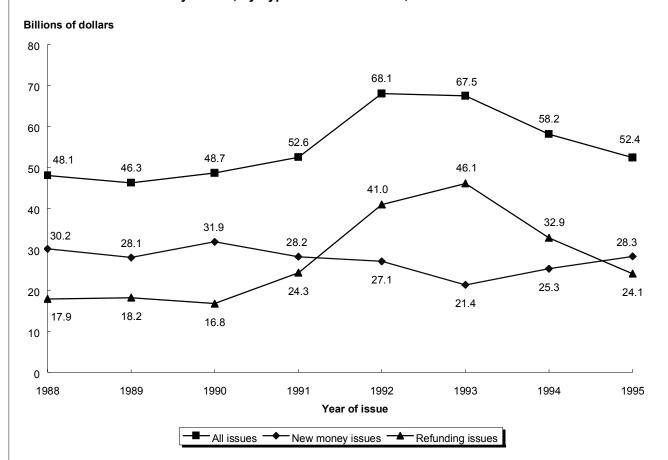

Private Activity Bond Volume

As shown in Figure A, the volume of tax-exempt private activity bonds issued by State and local governmental units increased from \$48.1 billion for

1988 to a high of \$68.1 billion for 1992. Following 1992, the volume steadily declined each year, reaching \$52.4 billion for 1995. Across this time period, new money bond issues ranged from a low of \$21.4 billion for 1993 to a high of \$31.9 billion for 1990. Most new money tax-exempt private activity bond issues are subject to State volume cap limitations that may restrict their issuance in any particular year. For 1995, the aggregate limit on new money bond issues subject to the volume cap was \$15.1 billion, excluding carryovers from prior years [5]. The aggregate issuance of new money tax-exempt private activity bonds subject to these volume cap

Figure A

Volume of Private Activity Bonds, by Type and Year of Issue, 1988-1995

limitations was \$14.8 billion for 1995.

Refunding issues increased substantially through 1993, peaking at \$46.1 billion for that year, before falling to \$24.1 billion for 1995. The peak in refunding issues is likely due to the decline in interest rates. State and local bond interest rates peaked during the early 1980's, reaching an annual average rate of 11.7 percent for 1982, then falling to an annual average rate of 7.7 percent for 1988 before reaching a low of 5.6 percent for 1993 [6]. Many State and local bonds were issued with call provisions that allowed the issuer to retire the bonds beginning 10 years from the date of issue, usually at par or at a small premium above par [7]. Call provisions allow the issuer of the bond to retire all or a portion of the bonds prior to the stated maturity date at a stated price. The data suggest that issuers of State and local bonds did indeed use call provisions, retiring outstanding high-interest bonds with the proceeds of new lower-interest bonds in so-called "current refundings."

The reported volume of refunding bonds also includes bonds issued to "advance refund" outstanding bonds issued to benefit section 501(c)(3) entities. An advance refunding is said to take place when the proceeds of a new bond issue are used to fund an escrow account for the purpose of paying debt service on an outstanding issue until its call date. On that date, the remaining assets in the escrow account are used to redeem the original bond issue. Advance refundings of most tax-exempt private activity bonds had been disallowed prior to enactment of the Tax Reform Act of 1986. That Act disallowed advance refundings of additional classes of tax-exempt private activity bonds, but not section 501(c)(3) bonds. They, like governmental bonds, were limited to one advance refunding, with a transition rule that allowed bonds issued before the effective date of the Act to be refunded twice (once if they had already been advance refunded one or more times before that date).

For all years during this period, the vast majority of tax-exempt private activity bond issues were long-term (i.e., maturities 13 months or more) (Table 1). Short-term tax-exempt private activity bonds are rare, in part, because these bonds are generally issued to fund long-term projects and must be factored into volume cap limitations. Of the \$52.4 billion of tax-

exempt private activity bonds issued for 1995, nearly \$51.4 billion were long-term issues. More than half (54.4 percent) of the total volume of long-term bond issues were new money bond issues, while the remainder were refunding bond issues.

Uses of Long-Term Tax-Exempt Private Activity Bonds Proceeds

For 1988 through 1995, the volume of long-term tax-exempt private activity bonds ranged between \$44.5 billion (for 1989) and \$66.6 billion (for 1993). During this period, 50 percent or more of all long-term private activity bond volume was related to mortgage revenue bonds or section 501(c)(3) bonds (Figure B and Table 2). On average, section 501(c)(3) bonds accounted for more than a third of the total during this period. For 1995, section 501(c)(3) bonds comprised 30.1 percent of the \$51.4 billion long-term tax-exempt private activity bonds issued. Other primary uses of bonds in that year were to finance owner-occupied residences (19.5 percent), residential rental property (11.9 percent), and airports (8.3 percent).

In many instances, a portion of the proceeds of the bonds is used to fund various fees and reserve accounts and to refund prior bond issues (Table 3). For 1995, nearly \$51.4 billion of long-term tax-exempt private activity bonds were issued. Issuers used \$424 million of bond proceeds to pay issuance costs, and \$154 million to pay credit enhancement fees, and allocated \$1.0 billion to reserve funds for these bond issues. Issuers also used \$23.1 billion of the proceeds to refund or retire prior bond issues. Approximately \$26.7 billion remained to be used for allowable purposes after the fees, reserves, and refunding.

New Money Issues of Long-Term Tax-Exempt Private Activity Bonds

For 1995, a total of 2,587 new money long-term taxexempt private activity bonds were issued with proceeds totaling \$27.9 billion (Table 4). For nearly three-fourths of these bond issues, the dollar volume per bond issue was under \$10 million. These bonds aggregated to \$5.2 billion, a little less than one-fifth of the total. The larger dollar volume issues were fewer in number but accounted for most of the total proceeds. Approximately \$9.2 billion were raised by

NOTE: Detail may not add to 100 percent because of rounding.

489 bond issues between \$10 million and \$50 million, while 171 bond issues with issue sizes of \$50 million or more raised \$13.5 billion.

As shown in Figure C, new money issues of long-term tax-exempt private activity bonds have varied substantially over the period from 1988 to 1995. New money issue volumes were generally higher in the earlier portion of this period, climbing to \$31.4 billion for 1990, declining to a low of \$21.2 billion for 1993, and rebounding to \$27.9 billion for 1995

Overall, section 501(c)(3) bonds accounted for nearly 40 percent of the \$217.3 billion of new money long-term tax-exempt private activity bonds issued during this 8-year period. Bonds, whose proceeds were used to fund owner-occupied residences (18.0 percent), airports (10.9 percent), solid waste disposal facilities (8.5 percent), small issue bonds (6.3 percent), and student loans (5.6 percent), were the other

primary bond types issued during this period. For 1995, the primary uses of the \$27.9 billion of new money bonds were to finance section 501(c)(3) activities (35.3 percent), owner-occupied residences (19.4 percent), airports (8.7 percent), small issues (8.6 percent), and solid waste disposals (8.3 percent) (Figure B).

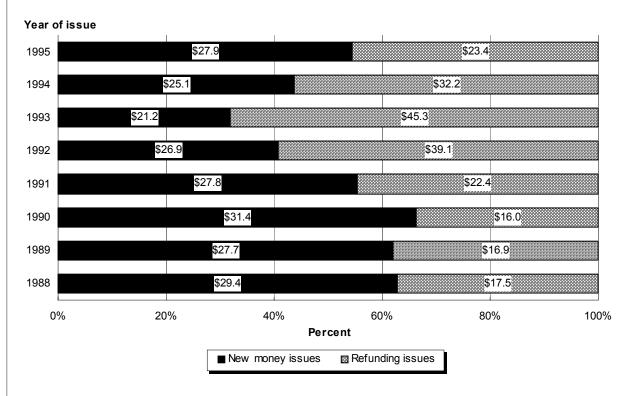

New Money Issues of Long-Term Tax-Exempt Private Activity Bonds by State

The volume of new money long-term tax-exempt private activity bond issues varied across the States (Tables 5 and 6). About \$85.4 billion (39.3 percent) of the \$217.3 billion of new money long-term tax-exempt private activity bonds issued across the period 1988 through 1995 were issued in the following six states: California (9.3 percent), New York (7.9 percent), Pennsylvania (5.9 percent), Texas (5.6 percent), Florida (5.4 percent), and Illinois (5.3

Figure C

Long-Term Private Activity Bonds, by Type and Year of Issue, 1988-1995

 $[\hbox{Money amounts are in billions of dollars}]$

percent). Bonds issued in Ohio (3.8 percent), Massachusetts (3.3 percent), Virginia (3.2 percent), Michigan (3.0 percent), Colorado (2.8 percent), and New Jersey (2.8 percent) accounted for an additional \$41.1 billion of the total (Figure D).

For 1995, more than half of the \$27.9 billion of new money long-term tax-exempt private activity bonds was issued in the following states: California (10.7 percent), New York (10.0 percent), Pennsylvania (5.5 percent), Florida (5.3 percent), Texas (5.2 percent), Illinois (4.1 percent), Michigan (3.6 percent), Ohio (3.3 percent), and Virginia (3.2 percent) (Table 6).

The 1986 Act extended the application of volume caps to most tax-exempt private activity bonds, with the major exception of hospital bonds for section 501(c)(3) entities. For the years covered in this article, bonds for section 501(c)(3) entities other than hospitals were subject to a per entity volume cap of \$150 million. Additionally, bonds for airports and

docks and wharves were excluded from the volume cap. Veterans' mortgage bonds were subjected to their own special volume limitations. States are free to make their own choices as to how to allocate the cap among the different purposes allowed for bonds subject to the cap. Current refunding bonds are not subject to the cap as long as there is no increase in the principal amount. For the years covered by this article, the annual volume cap for each State was the greater of \$50 per capita or \$150 million. Each State's reported volume of issuance in any particular year of new money bonds subject to the cap may legitimately exceed the cap for that year because of the operation of a carryover rule that allows an unused cap amount in a particular year to be carried over for up to 3 future years for certain types of taxexempt private activity bonds [8].

The 1986 Act also contained generous transition rules that exempted many specific issues from the volume cap. Issuance of bonds covered by the tran-

NOTE: Detail may not add to totals because of rounding.

sition rules is the primary reason the volume of new money issues is higher in the earlier years of the period covered by this article than in the later years.

Summary

Tax-exempt private activity bond volume varied substantially during the 8-year period extending from 1988 through 1995. During this time, State and local governmental units issued \$441.8 billion in new money and refunding tax-exempt private activity bonds, of which \$430.1 billion were long-term in nature. New money long-term tax-exempt private activity bonds issued in California, New York, Pennsylvania, Texas, Florida, and Illinois accounted for 39.3 percent of the \$217.3 billion of bonds issued during this period.

Data Sources and Limitations

The data presented in this article are based on information collected from Form 8038, *Information Return for Tax-Exempt Private Activity Bonds Issues*, for bonds issued in years 1988 through 1995. Because the entire population of Forms 8038 was used for this study, there is no sampling error. A number of checks were performed to ensure that each return was internally consistent and to exclude duplicate and amended returns. In some instances, returns

with incomplete information or errors were edited to resolve inconsistencies. However, in certain instances, it was not possible to reconcile reporting discrepancies. Thus, a certain amount of filer and processing error may remain.

Explanation of Selected Terms

Allocation to Reserve Fund.—Proceeds allocated reserve or replacement funds. The amount of proceeds deposited into a reserve or replacement fund may not exceed 10 percent of the proceeds of an issue.

Bond Issuance Costs.—Issuance costs include fees paid for trustees, bond counsel, and underwriters discount. Issuance costs paid out of private activity bond proceeds generally may not exceed 2 percent of the proceeds.

Credit Enhancement.—Fees paid for items such as bond insurance premiums and letters of credit fees.

Exempt Facility Bond.—This bond is part of an issue of which 95 percent or more of the net proceeds are to be used to finance a tax-exempt facility listed in Code sections 142(a)(1) through (12). These facilities comprise airports, docks and wharves, mass commuting facilities, facilities for the furnishing of water, sewage facilities, solid waste disposal facilities, qualified residential rental projects, facilities for

the local furnishing of electric energy or gas, local district heating or cooling facilities, qualified hazardous waste facilities, high-speed intercity rail facilities, and environmental enhancements of hydroelectric generating facilities. The Revenue Reconciliation Act of 1993 created a new category of bonds, qualified enterprise zone facility bonds, that may be issued for certain businesses in "empowerment zones" or "enterprise communities." Empowerment zone and enterprise community designations are made by the Secretaries of Agriculture and Housing and Urban Development for a 10-year period. Qualified enterprise zone facility bonds are generally subject to the same rules as exempt facility bonds.

Mortgage Bond.—This bond is part of an issue in which all proceeds (except issuance costs and reasonably required reserves) are to be used to finance owner-occupied residences.

Nongovernmental Output Property Bond.—This bond is part of an issue in which the proceeds are to be used to finance the acquisition of an output facility (other than a facility for the furnishing of water) that had been held by a person other than a governmental unit prior to its acquisition. This bond must meet additional tests under Code section 141(d).

Other Bonds.—Bond issues identified as other bonds in Tables 3 and 4 are issues of Texas veterans' land bonds, Oregon small-scale energy conservation and renewable resource loan bonds, or Iowa industrial new jobs training bonds.

Private Activity Bond.—This bond is generally part of an issue of which more than 10 percent of the proceeds are to be used for any private business use, and more than 10 percent of the payment of the principal or interest are either secured by an interest in property to be used for private business use (or payment for such property), or are to be derived from payments for property (or borrowed money) used for a private business use. A bond is also considered a private activity bond if the amount of the proceeds to be used to make or finance loans (other than loans described in Code section 141(c)(2)) to persons other than governmental units exceeds the smaller of 5 percent of the proceeds or \$5 million.

Redevelopment Bond.—This bond is generally part of an issue of which 95 percent or more of the net proceeds are to be used to finance certain specified real property acquisition and redevelopment in

blighted areas (see Code section 144(c) for additional requirements).

Section 501(c)(3) Bond.— A bond must meet the following conditions to be classified as a section 501(c)(3) bond: 1) all property financed by the net proceeds of the bond issue is to be owned by a section 501(c)(3) organization or a governmental unit. and 2) the bond would not be a private activity bond if section 501(c)(3) organizations were treated as governmental units with respect to their activities that are not related trades or businesses, and the private activity bond definition was applied using a 5-percent threshold rather than a 10-percent threshold. These bonds are issued by State and local governments to finance the activities of charitable, educational, hospital, and similar organizations that are tax-exempt under Code section 501(c)(3). The primary beneficiaries of these bonds are private. nonprofit hospitals; colleges; and universities. A section 501(c)(3) hospital bond issue is one in which 95 percent or more of the net proceeds are to be used for a hospital. Other section 501(c)(3) bond issues are those that are not related to hospitals.

Small Issue Bond.—This bond is part of an issue not exceeding \$1 million of which 95 percent or more of the net proceeds are to be used to finance land and depreciable property or to refund such issues. An election to take certain capital expenditures into account can increase the \$1-million limit on bond size to \$10 million in certain instances. These bonds may only be used to finance manufacturing facilities and to benefit certain first-time farmers.

Student Loan Bond.—This bond is part of an issue of which 90 percent or more of the net proceeds are to be used to make or finance student loans under a program of general application to which the Higher Education Act of 1965 applies (see Code section 144(b)(1)(A) for additional requirements), or 95 percent or more of the net proceeds are to be used to make or finance student loans under a program of general application approved by the State (see Code section 144(b)(1)(B) for additional requirements).

Tax Reform Act Transition Property Bond.—A bond issued under transitional rules contained in the Tax Reform Act of 1986. Proceeds from bonds issued under these rules include issues used to fund items such as pollution control facilities, parking

facilities, industrial parks, sports stadiums, and convention facilities. Proceeds from other bonds issued under the transitional rules are included in this category only if they could not be identified as another issue type.

U.S. Possessions Other Than Puerto Rico.—The Virgin Islands, Guam, and the Northern Mariana Islands comprise this category in Tables 5 and 6.

Veterans' Mortgage Bond.—In general, this bond is part of an issue of which 95 percent or more of the net proceeds are to be used to provide residences for veterans. The payment of interest and principal must be secured by a general obligation of the State, and the bond must meet certain of the requirements of Code section 143. The States that may issue veteran's mortgage bonds are Alaska, California, Oregon, Texas, and Wisconsin.

Notes and References

- [1] For the last Statistics of Income study of taxexempt private activity bonds, see Auten, Gerald and Chung, Edward, "Private Activity Tax-Exempt Bonds, 1986," *Statistics of Income Bulletin*, Summer 1988, Volume 8, Number 1. Data before 1987 were based on the year during which bond information returns were processed. Data reported in this article are based on the year during which bonds were issued. Data for 1987 are incomplete due to changing the data collection criteria from processing year to issue date and, thus, are not included in this article.
- [2] The term "State" includes the District of Columbia and any possession of the United States. Possessions of the United States reporting taxexempt private activity bond issues for the period 1988 through 1995 were Puerto Rico, Guam, Northern Mariana Islands, and the Virgin Islands.

- [3] The Tax Reform Act of 1969 (Public Law 91-172) imposed the first restrictions on the ability of issuers of tax-exempt bonds to generate arbitrage profits. For a general discussion of tax-exempt bonds as well as a more detailed discussion of their legislative history, see Zimmerman, Dennis, *The Private Use of Tax-Exempt Bonds*, The Urban Institute Press, Washington, DC, 1991 and *Fundamentals of Municipal Bonds*, Public Securities Association, Third Edition, New York, NY, 1987.

Differential taxation of nonprofits and the commercialization of nonprofit revenues

Joseph J. Cordes and Burton A. Weisbrod

Introduction

As the nonprofit sector has grown in economic importance, so too has its reliance on income obtained from a variety of commercial activities – that is, activities involving the sale of goods or services. Because commercial income earned in the nonprofit sector is largely, if not entirely, tax exempt, this trend raises several questions: Are nonprofit organizations encouraged to pursue commercial ventures that they would otherwise eschew because the income from such activities is tax exempt? When nonprofit enterprises move into commercial markets, does their tax-exempt status give them an economic advantage? Does the prospect of earning tax-free income create incentives for nonprofit organizations to divert their energies from core philanthropic activities in order to pursue commercial ventures that are justified only because they generate revenue for the core activities? How does the differential tax treatment of nonprofits affect choices among commercial ventures?

To answer these questions, we must recognize some distinguishing attributes of nonprofits (Weisbrod 1977, 1988; Hansmann 1980; James 1983; Steinberg 1991; Eckel and Steinberg 1994). Unlike for-profit enterprises, nonprofit organizations may regard the pursuit of profit in any market as a means of achieving other "more important" organizational goals, rather than as an end in itself. In addition, donations, an important source of revenue for many nonprofits, may be sensitive to these commercial activities. For example, donors may care about how nonprofits divide their efforts between profit-making activities and producing what donors believe to be the organization's "primary" output.

We are grateful to David Bradford. Charles Clotfelter, Susan Rose-Ackerman, and Bruce Davie for commenting on earlier drafts; to Cecilia Hilgert, Margaret Riley, Michael Alexander, Daniel Skelley, and Gary Jurevich, of the IRS, for help in obtaining and interpreting data on nonprofit organizations; and to Cagla Okten for research assistance.

Joseph J. Cordes and Burton A. Weisbrod

For these reasons, nonprofit managers may view commercial ventures differently than would for-profit competitors, and these differences must be considered when analyzing the effects of differential tax treatment of nonprofit enterprises. For a nonprofit organization, decisions on whether to engage in any commercial activity often quite rightly involve more than expected profitability. Following Chapter 3 and James (1983), our basic theoretical framework is one in which nonprofit organizations seek first and foremost to maximize their ability to provide a charitable good or service, while avoiding production or distribution of ancillary activities that can hamper achieving the primary mission. The ability to produce the preferred output, however, depends on the revenue not only from donations but also from user fees and – what is central in this chapter – from the production and sale of ancillary commercial outputs.

Nonprofit managers may view these ancillary outputs as a mixed blessing. Although profits from such activities provide needed income to supplement donations and allow increased provision of the primary output, the leadership of the nonprofit may dislike producing secondary output in principle, especially if that seems inconsistent with the organization's underlying objectives.

When nonprofits enter commercial markets to sell ancillary outputs, they face different tax rules than do for-profit producers of the same outputs. This chapter describes the nature of these tax differentials as well as implications for nonprofit organization behavior. We then consider the major effects of choices made by nonprofit organizations to engage in commercial activities, determining whether these choices are intentional, efficient, and equitable, and considering whether observed behavior of nonprofits in commercial markets is consistent with our predictions.

Differential tax treatment of nonprofit organizations

Income earned by for-profit enterprises is subject to tax in various forms. At the federal level, and in most states, businesses pay profits taxes on their income; and at the state and local level, businesses are taxed on property values. Non-profit organizations, however, are subject to different tax rules that provide very broad, if not complete, exemptions from these taxes. Nonprofit charitable organizations are generally exempt from paying state and local taxes on property used "primarily" for the organization's exempt purpose; and nonprofits are exempt from federal and state corporate income taxes on income from activities that, even if commercial, are deemed to be substantially related to the organization's primary exempt purpose.

In principle, neither the state nor federal tax exemptions are intended to apply to taxes that would otherwise be incurred in the pursuit of commercial activities that are *not* related to the nonprofit's primary exempt purpose. Thus, since the 1950s, nonprofits have been subject to a federal Unrelated Business

Differential taxation, commercialization of nonprofit revenues

Income Tax (UBIT), which is meant to tax nonprofits on the same basis as for-profit corporations on income earned in a "trade or business" that is "regularly carried on" by a nonprofit and not "substantially related" to the nonprofit's exempt purposes (Simon 1987; Hansmann 1989). States that levy corporate income taxes have followed the federal government's lead in this area by imposing their own unrelated business income taxes; and most states require that property be used primarily for an exempt purpose to qualify for property-tax exemptions.

The attempt by federal and state governments to tax unrelated commercial activities is intended to limit the extent to which nonprofits can exploit their tax-exempt status to produce commercial outputs having little or no connection to the organizations' primary "tax-exempt" output (Steinberg 1991). In practice, however, it has proved administratively difficult for federal, state, and local taxing authorities to differentiate taxable and nontaxable commercial activities (Simon 1987; Mikesell in press). Thus, tax experts widely agree that for many nonprofits, most, if not all, income earned from commercial undertakings is effectively tax exempt. Moreover, opportunities to shift reported revenues and costs between taxed and untaxed activities can allow nonprofits to avoid taxation even when an activity is clearly unrelated to its tax-exempt purpose.

Differential taxation and nonprofit behavior

How do these tax differentials affect choices that nonprofits make about both the degree and the forms of their commercial ventures? Answering this question first requires discussing the kinds of investment decisions that nonprofit organizations make, and how these may differ from those made by for-profit enterprises.

Modeling the investment choices of nonprofit organizations

We represent the nonprofit organization as an entity that seeks to maximize the utility from providing a preferred, "core," or mission-related nonprofit good or service, subject to the constraint that spending on that good cannot exceed revenue (James 1983; Schiff and Weisbrod 1991). Revenue depends on donations, user fees (discussed in Chapter 4), and profit from commercial activities, which is the focus of this chapter.

As in any organization deciding whether to invest in a business venture, there is an opportunity cost to a nonprofit engaging in commercial activities. As Rose-Ackerman (1982) noted, although nonprofits can finance investments in commercial activities from "free cash" or accumulated reserves, the use of these funds is not free; every dollar invested in the commercial activity could instead be used to earn income from passive investments in securities. The nonprofit

could also borrow some or all of the funds needed to finance the commercial activity, but at a cost. The key question is whether the nonprofit can realize a greater rate of return by investing in ancillary commercial activities rather than in passive investments.

Following Schiff and Weisbrod (1991), we also assume that donations increase with the nonprofit's production of preferred, mission-related goods and with its fund-raising expenditures as well. In addition, we assume that commercial activity may negatively affect donations if opposed by donors or positively if viewed as appropriate self-help.

Maximizing a nonprofit's utility subject to the financial constraint implies that nonprofits will invest in fund-raising up to the point where a marginal dollar spent on eliciting donations equals the cost of fund-raising. However, fundraising in itself could also be seen as a nonpreferred, ancillary activity, in which case the organization would stop short of the amount of fund-raising that would maximize revenue from this source (Weisbrod and Dominguez 1986).

A similar condition defines the required return, or *hurdle rate*, that an additional dollar invested in a commercial activity must earn to justify the investment. For nonprofits this hurdle rate does not depend exclusively on the financial cost of funds, as would be the case for a for-profit enterprise, because the organization or its potential donors might have a distaste for engaging in ancillary commercial activity.

When such distaste is present, the nonprofit will invest in a commercial activity to the point where marginal profit on an additional dollar spent on the commercial activity equals the sum of the financial cost of funds, plus an additional premium to compensate for the loss in utility and/or donor contributions resulting from increased investment in the commercial activity. This hurdle rate is the starting point for analyzing what motivates nonprofits to invest their resources in commercial activities.

Nonprofit and for-profit behavior in the absence of taxation

We first consider briefly how nonprofit and for-profit organizations would be expected to behave if all returns from commercial activities were untaxed. This setting is clearly unrealistic, but it provides a useful baseline for understanding the effects of differential taxation.

In such a world, a typical for-profit organization would invest in a commercial activity until the marginal profit per dollar invested in the activity equaled the opportunity cost of funds. Whether a nonprofit organization would use the same investment criterion depends, as noted, on whether it or its donors had a distaste for engaging in commercial ventures. Were there no aversion to undertaking commercial revenue-generating activities, a nonprofit would act as a profit maximizer in commercial markets regardless of its goals; that is, it would

behave just like a for-profit enterprise with regard to the decision about whether and how much to invest in a commercial activity. Nonprofits would want to maximize net revenue from commercial activities to maximize funding of mission-related output.

Thus, if there were no aversion by the nonprofit or donors to commercial activities, nonprofits would behave in the same way as for-profits in the commercial market even though the pursuit of profit was not a goal for the nonprofit as a whole. Both types of enterprise would use the same criterion – profitability – to evaluate whether or not to invest in a given commercial activity. If nonprofits received no special subsidies, they would compete on an even footing in capital markets with for-profits, who could not then complain about being undercut by "unfair competition."

However, if either the nonprofit or its donors had a distaste for engaging in commercial activities, the financial test that a nonprofit would apply before engaging in a commercial activity would actually be relatively *more stringent*. It would not be enough for a commercial activity to earn a profit commensurate with the financial opportunity cost of funds. The marginal profit would have to exceed the financial cost of funds by enough to compensate for the disutility of the activity and net loss of contributions from donors; thus, a nonprofit would engage in less commercial activity than would be profit maximizing.

Aversion to commercial activities could be strong enough to cause the non-profit to avoid certain ancillary commercial ventures entirely. If economic return to a commercial activity were set by competition among for-profit producers, the marginal profit that could be earned by a nonprofit could not exceed the financial opportunity cost of capital. In such a case, the nonprofit could not earn a marginal profit high enough to cover both the cost of funds and the "aversion premium" required for engaging in the nonpreferred activity.

Even so, nonprofits might still choose to engage in some commercial activities if there were cost complementarities between these activities and the preferred, mission-related output and if the nonprofit benefited from donations or subsidies. This could allow the nonprofits to earn a greater marginal return on the commercial activity than could for-profit competitors lacking such benefits.

Thus, in a world in which both nonprofits and for-profits were untaxed, the propensity of nonprofits to seek out commercial sources of revenue would depend on whether the nonprofit and/or its donors saw pursuing profit as a means to finance – that is, cross-subsidize – its mission. Commercial activities seen as conflicting with the mission, while regarded as economically profitable by for-profits, would not be worth undertaking by nonprofits. Such aversion could be overcome, however, if nonprofit production of preferred output brought sufficient cost advantages in ancillary markets. In the more general case, in which individual nonprofits have varying degrees of aversion for commercial ventures and differing abilities to exploit cost complementarities, we would expect en-

try into commercial markets to be concentrated in activities where aversion is least – perhaps because the activity is "closest" to the nonprofit's mission – and where there was the most potential for exploiting cost complementarities between commercial outputs and their preferred output.

Effects of differential taxation of nonprofit and for-profit enterprises

A central insight of our model is that when a nonprofit is averse to pursuing profit in commercial markets, it will engage in commercial activities only if it expects to earn a *premium* above the competitive rate of return that it could earn from passive investments. This implies that differential taxation of non- and forprofit enterprises, by itself, would not provide a financial incentive for non-profits to pursue otherwise objectionable commercial ventures.

The importance of tax-induced investment premiums

Consider a case in which nonprofits have no special tax incentive to engage in commercial ventures, despite exemption from taxes on ancillary business profits. Such a situation would arise if for-profit enterprises were subject to a neutral tax on business income, one that taxed income from all sources at the same rate and allowed interest on debt to be deducted (Rose-Ackerman 1982). Although one might think that the exempt nonprofit would have an incentive to seek out tax-exempt commercial activities under these circumstances, nonprofits would earn no premium above the competitive return by doing so. If profits from all business activities were taxed at the same rate, the marginal profit that a nonprofit could earn from investing in a commercial venture would equal the opportunity cost of funds, as it would in the no-tax case. Moreover, as in the no-tax case, if either the nonprofit or its donors had a distaste for engaging in commercial activities, the nonprofit would prefer investing passively if all it could do is earn the same rate of return as would a for-profit competitor. Exemption from tax would allow a nonprofit to earn a higher return from commercial activity; however, it would also raise the financial (opportunity) cost of engaging in such a venture because the financial returns from passive investments would also be tax-exempt, whereas interest on debt would not be tax-deductible. Under a neutral income tax, these two features of the tax exemption would exactly balance each other so that the nonprofit and for-profit would face the same incentives at the margin for investing in a commercial enterprise.

Effects of property and corporate tax exemptions

There are, however, several important instances in which differential taxation of nonprofits potentially allows nonprofits to earn premium returns from invest-

ing in commercial ventures that exceed the competitive return. One is the exemption from local property taxes for nonprofits. If for-profit enterprises must pay these taxes, a for-profit would invest in a commercial activity up to the point where the marginal profit per dollar invested was enough to cover the opportunity cost of funds plus the property tax per dollar invested. Since nonprofits do not pay property taxes, in effect they would earn the same pretax total return as a for-profit, without having to pay the property tax.¹

Exemption from corporate profit taxes on commercial activities deemed to be "substantially related" to the nonprofit's primary purpose creates another potentially exploitable tax premium (Cordes and Sheffrin 1981; Rose-Ackerman 1982). This comes about because, unlike in the example discussed above, business income is not taxed at the same rate regardless of source; rather, corporate income is taxed once at the corporate level and then again at the individual level, whereas income earned by unincorporated enterprises is taxed only once at the individual level. To compensate for the double taxation of corporate income, the pretax return to an additional dollar invested in a commercial activity undertaken by a corporation will come to exceed the interest rate. For-profit unincorporated firms, however, would continue to invest up to the point where the marginal return equaled the opportunity cost of funds.

This model implies that nonprofits have no particular tax incentive to invest in tax-exempt activities dominated by unincorporated enterprises, because competition in capital markets will cause these activities to earn the same pretax return as could be earned by investing passively in bonds. (As Hansmann [1989] has noted, with a corporate tax, nonprofits would have a tax disincentive to hold corporate common stock, because as shareholders they could not avoid paying the corporate tax, collected directly from the corporation). There would, however, be a tax incentive for nonprofits to engage actively in tax-exempt related commercial activities dominated by corporate producers, and compete with for-profits in those markets because they could earn a return exceeding the competitive return from passive investments.

Tax treatment of unrelated business income

Not all business income earned by nonprofits, however, is tax exempt. As noted above, profits earned from activities deemed unrelated to the organization's tax-exempt purpose are subject to both federal and state Unrelated Business Income Taxes (UBIT); and most states tax any property that is not used primarily for the organization's primary exempt purpose.

In principle, these taxes would appear to discourage nonprofits from investing in unrelated commercial activities. If a nonprofit is already averse to earn-

In practice, some nonprofits may pay something like a partial property tax to the extent that they make "voluntary" payments in lieu of tax (PILOTs).

ing income from such ventures, an investment subject to federal and state taxation would have to earn an even higher pretax return to make it worthwhile.

In practice, however, many nonprofits may be able to arrange their financial affairs so that income that is nominally subject to federal and state UBITs may be subject to little or no tax. For example, a nonprofit could deduct a portion of "joint" costs – costs of inputs that contribute to both its mission-related and tax-exempt commercial outputs – against profits from its unrelated, taxed activity. Although such cost shifting would not by itself allow a nonprofit to escape paying taxes on property used solely to produce unrelated business income, property taxes could be avoided to the extent that the property used to generate such income was also "primarily" used for mission-related, exempt purposes.

The presence of joint costs shared by related and unrelated activities not only permits but encourages nonprofits to shift costs. Indeed, there is striking evidence that nonprofits take advantage of such opportunities. Of the 32,690 nonprofits that filed UBIT returns in 1991, almost three out of five reported losses – negative taxable income – and for the UBIT filers as a group, total expenses allocated to providing unrelated activities exceeded total revenues, implying that, overall, unrelated activities are unprofitable (Riley 1995). Since nonprofits presumably engage in unrelated activities only to fund their tax-exempt activities, truly unprofitable unrelated services make no sense. In reality, cost shifting allows reported profit to be zero or even negative, even though there may be a substantial marginal profit from the unrelated activity that generates considerable revenue for the preferred, tax-exempt outputs.

Empirical evidence

Our framework predicts that the relative importance of commercial activities to nonprofits reflects three broad factors:

- 1 the abilities of particular nonprofits to exploit *cost complementarities*;
- 2 the nonprofit's *aversion premium*, which in turn depends on the preferences of both nonprofits and their donors; and
- 3 the size of the pretax investment premium that can be earned on commercial ventures.

The model also predicts, moreover, that, despite the disadvantages of earning income from unrelated, and hence nominally taxable, commercial activities, nonprofits will undertake such business activities given a certain circumstance: The activities must allow the nonprofit to earn a pretax investment premium over and above the opportunity cost of funds. A major contributing factor is the opportunity to use the same inputs in both mission-related and the unrelated commercial market; this provides the opportunity for the nonprofit to shift costs and possibly revenue between taxed and untaxed goods to minimize taxes on the unrelated activity.

We examined some of these predictions with data from the Statistics of Income (SOI) public-use sample of IRS Form 990 tax returns (see Appendix) filed in 1992 by nonprofit charitable organizations exempt from taxes under Section 501(c)(3) of the Internal Revenue Code.

Measures of commercial activity

Determining whether variables suggested by the theoretical model explain variation in the propensity of nonprofit organizations to engage in commercial ventures requires a means of measuring an organization's propensity to engage in commercial activities. One such measure is Commercial Share, defined as the share of the nonprofit's total revenue derived from sources that can reasonably be attributed to commercial activities that are exempt from taxation. We measure Commercial Share as the share of total revenue derived from program services, which is widely used to gauge how much nonprofit organizations depend on revenue sources other than contributions, plus other income from excluded activities and special events. To focus on commercial revenue sources likely to benefit from nonprofit tax exemption, Commercial Share excludes components of program service revenue (PSR) reported as unrelated business income. Another, dichotomous measure is whether the nonprofit had at least \$1,000 in gross revenue from the unrelated business activity, and so was required to file a UBIT return.

Although PSR, which is an important component of Commercial Share, is a commonly used indicator of the extent to which nonprofits engage in business-like activities, it is not ideal because it includes income from activities such as tuition payments by students, which may be neither business activities in the sense discussed above, nor viewed as nonpreferred sources of revenue. None-theless, because Commercial Share includes income from a wide range of commercial activities, variation in this variable is likely to reflect variation among nonprofits in the propensity to rely on commercial sources of revenue.²

Measures of cost shifting

We also seek to examine whether nonprofits attempt to shift costs to reduce taxable income subject to the UBIT. Froelich and Knoepfle (1996) note that nonprofits enjoy fairly wide latitude in allocating wages and salaries that are part of management and general "overhead" among their various functional activities. One option open to nonprofits reporting revenue from sales of goods is to include a portion of wages and salaries that would otherwise be included under

² In principle, it would be desirable to distinguish between elements of program services that are businesslike and those that are not, but this is not possible in the public-use sample. The results reported in Table 5.1 were not sensitive to the use of alternative definitions of Commercial Share, some of which included unrelated business income.

"managerial and general expenses" as part of the cost of goods sold. As Froelich and Knoepfle (1996) point out, nonprofits may choose this strategy for a variety of reasons, not all of which are motivated by taxes; for example, nonprofits may seek to minimize their reported management expenses to appear more efficient in using charitable donations. Still, a nonprofit subject to the UBIT has an additional incentive to shift wage and salary expenses into the cost of goods sold to reduce taxable income. As a by-product of reporting these expenses as costs of goods sold rather than as management costs, the nonprofit would also report lower amounts of managerial and general salary expense. Therefore, we use as a measure of cost shifting the variable Management/General Salaries, which is the ratio of wages and salaries reported as part of "management and general expenses" to total expenses reported on the Form 990 return. We hypothesized that when a nonprofit is subject to the UBIT, it will be more likely to shift a portion of these joint costs to the Form 990 category of "cost of goods sold," and hence report lower amounts of total management and general wages and salaries as part of its functional expenses. UBIT filers would thus be expected to have lower ratios of management/general wage and salary expense to total expenses than would nonprofits with otherwise identical attributes who were not engaged in commercial activity subject to the UBIT.

Measures of cost complementarities and aversion

It is difficult to construct suitable measures for an organization's aversion to undertaking commercial activities and for its ability to exploit cost complementarities, but we can use two reasonable, if crude, proxies.

Entity size. It is likely that both opportunities for exploiting cost complementarities and the degree of aversion to pursuing commercial ventures will vary with the size of the nonprofit. Larger nonprofits may well have more opportunities than smaller ones to exploit cost complementaries. To the extent that smaller nonprofits are also likely to be relatively new, prospective donors might also be more likely to monitor the extent of their commercial activities. If so, aversion to commercial ventures would fall with an increase in the size of the nonprofit.

The implication of these two hypotheses is that the propensity to engage in commercial activities should increase with the nonprofit's size, as measured by the variable Assets, the end-of-year assets reported by the nonprofit. This prediction is consistent with tabulations of aggregate data reported on Form 990 returns, which indicate that larger nonprofits receive a larger share of their revenue from commercial sources (Hilgert and Arnsberger 1992). These tabulations, however, are presented for nonprofits as a whole, and thus do not control for the nature of the nonprofit's primary output, as reflected by its grouping in

the National Taxonomy of Exempt Enterprises (NTEE), which one might also expect to affect the likelihood of engaging in commercial activities.

Source of donations. It also seems reasonable to assume that the aversion premium could vary with type of donor – for example, private versus government. Although the model does not make specific predictions about which type is more likely to oppose commercial undertakings by nonprofits, we construct the variable Pct. Public Contributions, which is the share of total contributions received from government sources, to examine the possibly differential effect of government and private "contributions, gifts, and grants."

Type of activity. Both a nonprofit's aversion premium and its ability to exploit cost complementarities may also vary with the nature of its primary output. Universities or hospitals, for example, may have greater opportunities to develop cost complementarities than, say, human-service providers because of the variety of their resource inputs. Thus we include a series of dummy variables that correspond to the major NTEE categories of arts, education, health, and human services, which have sufficient sample size to generate meaningful results (see also Chapter 6). The comparison group in the regressions comprises nonprofits in various other NTEE categories (environment and animals, international, public, societal benefit, religious, mutual membership, and unknown).

Measures of tax premiums

Last, the model predicts that nonprofits should be more likely to invest in commercial activities that offer the prospect of capturing tax premiums exceeding the competitive return. Although the tax premiums generated by differential taxation at the federal level do not vary among nonprofits in a single year, local property tax and state corporate tax rates vary. In theory, there should therefore be some variation by state in the pretax investment premiums that can be earned from commercial ventures.

Hansmann (1987) and Gulley and Santerre (1993) use interstate variation in property and corporate tax rates to examine whether aggregate market share of nonprofits in selected industries is higher in states with relatively high property and corporate tax rates – where the nonprofit's advantage is greatest. They find that, as the theory predicts, the market share of nonprofit organizations increases with the size of the tax differential.

These studies focus on what might be described as the aggregate outcome of many individual decisions made by nonprofits to engage in commercial activity. We use data from the Form 990 returns to examine the behavior of individual nonprofits. To capture such variation we have added two dummy state-tax variables, using data published by the Tax Foundation (1993/4) and Minneso-

ta Taxpayers Association (1996), to the individual observations in the 1992 public-use sample. These variables were constructed to distinguish states where relatively high local property tax rates and corporate tax rates would, in theory, allow nonprofits to earn relatively large tax-induced premiums. The variable Proptax = 1 in states where local commercial property tax rates ranked among the top ten in the country; the variable Corptax = 1 if the nonprofit is located in one of the nine states with a statutory tax rate in excess of 10 percent.

Results

Table 5.1 presents estimates of a regression of the variable Commercial Share on proxies for a nonprofit's aversion to commercial ventures and ability to exploit cost complementarities, as well as state-level tax dummy variables. Table 5.2 presents the probability (logit regression) that a nonprofit files a UBIT return (Form 990-T) as a function of the same variables. Table 5.3 presents estimates of a regression of Management/General Salaries on several characteristics of the nonprofit, including whether it was required to file a UBIT tax return.

The results are generally consistent with expectations. Table 5.1 shows that the industry of a nonprofit's primary output significantly affects its propensity to rely on revenue from commercial sales. The significant, positive coefficients on the NTEE dummy variables show that nonprofits with mission-related outputs in the areas of arts, education, health, and human services all derive a larger share of funds from tax-exempt commercial activities than do nonprofits in the comparison group. Holding size constant, nonprofit providers of health services receive roughly \$0.75 of every revenue dollar from such sources, reflecting the major effect of hospitals, followed by nonprofit providers of education and human services, which derive roughly \$0.50 of every dollar from commercial sources.

The results also show that after controlling for the nature of the nonprofit's mission-related outputs, size (Assets) of the nonprofit is associated positively with revenue share from commercial sources. The negative coefficient of Assets Squared indicates that although the propensity to engage in commercial activities increases with size, it does so at a decreasing rate. This suggests that, after some point, a nonprofit's ability to exploit cost complementarities encounters diminishing returns.

When size is measured in dollars as a continuous variable, increases in asset size have a quite small effect on share of commercial revenue. The estimated coefficients on Assets and Assets Squared indicate that for a nonprofit with \$20 million in assets, doubling its size would increase the share of revenue derived from commercial activities by roughly two-tenths of a percentage point.

This relatively small effect may, however, reflect the fact that almost three out of every four charitable organizations in the SOI sample has a "large" asset size of \$10 million or more. To examine this issue further, we therefore con-

structed a dummy variable equal to 1 if the nonprofit had assets of \$5 million or more, and zero otherwise. Though the results are not shown here, when we replaced the continuous measure of size in the regression for Commercial Share with this variable, the coefficients of the other variables remained of the same sign and magnitude as shown in Table 5.1; and smaller nonprofits are quantitatively as well as statistically much less likely to rely on commercial revenues. The coefficient of the size dummy implies that the commercial revenue share among "small" nonprofits – those with less than \$5 million in assets – is almost 17 percentage points lower than the corresponding commercial revenue share among larger nonprofits.

Table 5.2 shows broadly similar patterns and effects of both the nonprofit's industry and size on its propensity to undertake taxable commercial activities. The odds ratios calculated from the estimated coefficients in the logit regression imply that nonprofit providers of health services are about 2.4 times more likely than the reference group to report revenue from program services subject to the UBIT. (The *odds ratio* is the ratio of the predicted probability that the organization files a UBIT return to the predicted probability that it does not.) Non-

^{**} Statistically significant at the .01 level.

profit organizations in the arts and education are both about twice as likely as nonprofits in the reference group to receive such revenue. Nonprofit human-service providers, however, are about 50 percent less likely than those in the reference group to engage in unrelated business activities subject to the UBIT.

Assets also affect the probability of filing a UBIT return. The estimated coefficients of Assets and Assets Squared indicate that doubling the size of a non-profit with \$20 million in assets would increase its odds of filing a UBIT return by roughly 12 percent. Replacing the continuous asset-size variables with a size dummy also results in a much larger estimated effect of asset size: Non-profits with assets of \$5 million or more are roughly five times more likely to file a UBIT return than are other nonprofits. Whether size is proxied by a continuous or a dichotomous variable, however, it should be noted that larger nonprofits are also more likely to file UBIT returns simply because the scale of their unrelated activities is more likely to trigger the UBIT filing threshold of \$1,000 in gross income.

Our results indicate that the source of donations affects a nonprofit's commercial activities – as measured by both commercial revenue share (Table 5.1) and filing a UBIT return (Table 5.2). The greater the share of contributions that a nonprofit receives from public rather than private sources, the less likely the nonprofit is to rely on revenue obtained from commercial activities (tax exempt and taxable). The estimated coefficients of Pct. Public Contributions in Tables 5.1 and 5.2 imply, respectively, that a ten-percentage-point increase in the share of contributions received from public sources reduces the revenue share derived from program services by half a percentage point, and lowers the odds that the nonprofit files a UBIT return by about 20 percent. A possible explanation is that public donors are more likely than private donors to be averse to commercial activities of nonprofits.

Tables 5.1 and 5.2 also show that nonprofits are more likely to rely on commercial revenue sources when located in states with relatively high taxes. The estimated coefficients of both the property- and the corporate-tax variables are positive and statistically significant in the regression for Commercial Share, indicating that nonprofits in high-tax states are more likely to depend on commercial sales for revenue. The magnitudes of the coefficients imply that location in one of the ten states with the highest commercial property tax rates raises the nonprofit's commercial revenue share by about 3 percentage points; and location in a high-corporate-tax state raises commercial share by 4 percentage points. These results are generally consistent with previous research showing that cross-state variation in property and business taxation helps to explain the relative importance of nonprofits in certain industries.

Table 5.2 also indicates that nonprofits located in relatively high-corporatetax states are also more likely to undertake unrelated – taxable – business activities. The odds ratios calculated from the estimated coefficient imply that non-

profits located in high-corporate-tax states are about one-third more likely to file a UBIT return than are nonprofits in states with lower taxes.

These results would be unexpected if unrelated business activities in these high-tax states were actually taxed. However, the ability of nonprofits essentially to avoid taxation of profit by shifting costs and revenue between taxable and nontaxable activities tends to make unrelated business activities relatively more attractive financially. In these cases, we would expect variation in state-level tax rates to have the same effect on a nonprofit's decision to engage in an unrelated business activity as in a tax-exempt activity.

In this vein, the results in Table 5.3 provide more direct statistical evidence that nonprofits take advantage of opportunities for reducing their taxable income by shifting costs when they are subject to the UBIT. To test the hypothesis that UBIT filers have an incentive to shift wage and salary expenses into cost of goods sold, we restricted our attention in the SOI sample to nonprofits reporting at least \$1,000 in gross receipts from sales, thereby giving them the opportunity to shift management and general wage and salary expenses.

^{**} Statistically significant at the .01 level.

As predicted, we find that nonprofit organizations that filed a UBIT return reported lower ratios of management and general wage and salary costs to total expense on their Form 990 returns. The estimated coefficient indicates that the ratio of such costs to total expenses among UBIT filers is about 1 percentage point lower than for organizations not subject to tax.

The magnitude of the coefficient may seem to indicate only a moderate degree of cost-shifting, but the amount of wage and salary expense that is estimated to be shifted must be compared with the amount of potentially taxable income. Among firms required to file a UBIT return, the 1-percentage-point difference in the ratio of "shiftable expense" to total expense amounts to roughly \$650,000. This figure may be compared with the amount of "gross profit from sales" (gross receipts minus cost of goods sold) reported by UBIT filers – approximately \$2.2 million. In other words, the amount of expenses estimated to be shifted from overhead wages and salaries is almost a third of "gross profit."

In addition to the dummy variable UBIT, we also included the variable Contributions, which is the ratio of revenue received from private direct and indirect contributions, plus special fund-raising events, to total revenue. This variable is intended to control for the degree to which the nonprofit cares about its reported management expense for reasons other than taxes (e.g., any adverse effect on donations). The implication is that organizations that depend more on contributions would be more apt to care about the reported amount of management expense, and hence have an incentive to shift management/general wage and salary expense into cost of goods sold, whether or not they were subject to the UBIT. Although tangential to our analysis, the coefficient of this variable is significant and of the expected negative sign, indicating that nonprofits that depend more on contributions are also more likely to report lower ratios of management/general wage and salary expense to total expense.

To see whether the above results reflect cost shifting, we also estimated the same equation as that presented in Table 5.3 for the subsample of nonprofits in the SOI sample with little or no opportunity to shift expenses from elsewhere on the Form 990 return into the cost of goods sold because they had less than \$1,000 in gross sales. Although the results are not reported here, neither the UBIT nor the Contributions variable was statistically significant in these regressions. This is what one would expect in the case where shifting wages and salaries out of management and general expenses into cost of goods sold was not an option, providing some further evidence that the estimated coefficients in Table 5.3 are indicative of cost shifting that is motivated by both tax and other motives

These results also suggest that increased commercial activity by nonprofits may indirectly affect public perceptions of the "effectiveness" of different organizations. Nonprofits that can deduct cost of goods sold have opportunities to report expenses on the Form 990 return in ways that make financial ratios of-

ten used to gauge an organization's "fund-raising effectiveness" (e.g., the ratio of management and general expenses, plus fund-raising costs, to contributions) look more favorable.

In addition to examining the shifting of costs from managerial expense to cost of goods sold, we also investigated the extent to which nonprofits' unrelated business activities are taxed very little because joint costs are allocated to those activities on the UBIT return – IRS Form 990-T – thereby reducing or even eliminating reported profit. When resource inputs are joint, determined essentially by the level of mission-related activity, the true marginal costs of engaging in unrelated business activities will be small, or even zero. How much of the costs reported by nonprofits as attributable to taxable, unrelated business activity on the Form 990-T returns is simply a reallocation of joint costs? Is it true that commercial activity in unrelated business is as unprofitable as most UBIT returns indicate?

To answer these questions we sought to determine the extent to which costs claimed on UBIT returns are truly attributable to the unrelated activities, and to what extent they would been incurred even if those activities were not undertaken. Specifically, we regressed a nonprofit's "total compensation" costs on the

^{*} Statistically significant at the .05 level.

^{**} Statistically significant at the .01 level.

magnitude of its activities in related and in unrelated markets, using an organization fixed-effects estimator. The predictions were that

- additional *related* activity, as measured by the gross revenue it generates, would be associated with greater labor-compensation costs, but
- 2 additional *unrelated* activity, also measured by its gross revenue, would be associated with less, even no, additional compensation costs.

The different expectations for the cost effects of related and unrelated, untaxed and taxed, activities hinge on the joint-cost hypothesis.

Data are from the SOI samples of Form 990 returns for the four years 1990—3. We analyze separately the regression equations for each of three industry groups. The number of organizations varied somewhat from year to year, but for the four years included 6,662 observations for hospitals, 2,014 for universities, and 572 for museums.

The findings are striking. In each of the industries we found, as hypothesized, that (1) additional gross income from *untaxed* activity had a positive, statistically significant, and substantial effect on total compensation, and (2) additional income from *taxed* (UBIT) activity had no significant effect on total compensation (Table 5.4).³ It seems, not surprisingly, that nonprofits are selecting unrelated commercial activities that use the same inputs required for the mission-related activities, so that the marginal costs of added unrelated activity are essentially zero.

How do these findings compare with the allocation of labor-compensation costs to the unrelated, taxed activities on actual UBIT returns? We were able to examine these returns for a small subsample of nonprofits to determine the relationship between gross revenue and the compensation costs that were deducted as attributable to the taxed activities. The picture is very different. Table 5.5 shows regression estimates for the effect of additional gross unrelated business income on labor-compensation expense reported on the Form 990-T return. Data were available only for 1990. An incremental dollar of unrelated business gross income was associated with an additional, and highly significant, twenty-two cents of reported compensation costs in hospitals, fourteen cents in higher education, and five cents in museums. For this subsample, we also replicated the regression equations in Table 5.4, and with the same findings (not shown, but available from the authors): Increased income from untaxed activities was associated with a positive and significant effect on total compensation costs, as shown on the Form 990, but increased gross income from taxed, unrelated activities was associated with no statistically significant increase in compensation costs. In short, increased unrelated business income appears to lead

Untaxed activities are of two types: related and excluded. The latter are not taxed even though they are not related to the nonprofit's mission. Exclusions are given when activities are incidental or occasional, or are undertaken "for the convenience of" persons such as hospital patients and museum visitors. Our findings are affected little by omitting excluded income.

to no increase in actual compensation costs, but does lead to an increase in the compensation costs that are allocated to taxable income.

Commercialism in the form of unrelated business activity is growing. The number of filers of UBIT returns has doubled between 1985 and 1995, from 24,103 to 50,034 (Herman 1997). Between 1990 and 1993, the latest year for which data are available, gross activity (unrelated business income) increased by nearly 35 percent, from \$3.5 billion to \$4.7 billion (in nominal dollars). At

the same time that gross income was soaring, opportunities to avoid taxation by allocating joint costs appear to have been broadly recognized, and so much more in expenses were deducted that taxable income actually fell. Aggregate net taxable unrelated business income, –\$631 million in 1990, dropped to –\$1.2 billion in 1993 (Riley 1995, 1997).

If further analysis sustains our findings, the consequences are dramatic. Most, if not all, of the labor-compensation costs reported on UBIT returns reflect not true costs of the activities but only allocation of fixed costs that would have been incurred even were there less or no unrelated business activity. This does not imply any illegalities, but it does raise questions about accounting rules for joint-cost allocations between taxed and untaxed activities.

Policy implications

The theory and the evidence presented above suggest that differential taxation of nonprofits and for-profits creates opportunities for nonprofits to earn above-normal returns on commercial ventures, thus helping them overcome a "natural" aversion to pursuing profits in ancillary markets. As Rose-Ackerman (1982) first observed in the context of a model assuming no such aversion, this means that changes in the taxation of for-profit firms, while not specifically applying to nonprofits, can nonetheless raise or lower the tax premium that nonprofits can earn from commercial activity in competition with for-profits. Indeed, even though the taxation of nonprofits has remained essentially unchanged for many years, changes during the 1980s that occurred in the tax treatment of their for-profit corporate competitors first decreased and then increased the tax premiums that nonprofits could potentially earn from commercial ventures.

In the early 1980s, changes in business taxation set in motion by the Economic Recovery Tax Act of 1981 (ERTA) significantly reduced the effective tax rate on corporate profits. The effect of this change was to reduce the gap between the return that nonprofits could obtain on commercial activity in markets dominated by private corporate producers and the return that nonprofits could earn on passive investments. For the five years in which ERTA was in effect, differential taxation of nonprofits should, in theory, have reduced the relative financial incentives to engage in active commercial activity.

The Tax Reform Act of 1986 (or TRA 1986), however, raised the effective federal tax rate on corporate profits. This should have increased the return available to nonprofits on commercial activity in markets dominated by corporate producers, thereby creating stronger tax incentives for nonprofits to invest in commercial activities, particularly those "related" to their exempt mission.⁴

⁴ The same point can be stated differently. One can imagine three organizational forms that compete with each other: for-profit corporations, for-profit unincorporated businesses, and non-profit organizations. If the tax system works to the disadvantage of for-profit corporations, it will

The effect of TRA 1986 on the incentive to engage in unrelated business activity, however, is ambiguous. On one hand, because the UBIT parallels the corporate income tax, increasing the effective tax rate on corporate income would have reduced the incentive of nonprofits to engage in unrelated business activities if the income from such activities was actually taxed. On the other hand, raising the effective corporate tax rate could have the opposite effect of encouraging nonprofits to engage in unrelated business activities if the income from such activities was effectively tax exempt – because of either lax enforcement or cost shifting. This latter possibility seems to have been plausible, in light of both the small amount of aggregate UBIT taxable income reported by nonprofits in 1991 and our empirical analysis of the effects of UBIT filing status on reported expense ratios of nonprofits.

Whatever the changes in incentives, however, competition between tax-exempt nonprofits and private firms poses numerous issues that were discussed in Chapter 1 – in particular, whether nonprofit commercial activities, whatever their goal, are efficient uses of resources and fair to the taxed organizations. This subject has received considerable attention, beyond the scope of this chapter (Rose-Ackerman 1982; Weisbrod 1988; Hansmann 1989; Steinberg 1991). The preceding discussion, however, highlights two points that have not been emphasized in this literature: The first is that differential taxation of nonprofits is likely to provide the greatest financial incentive to pursue profit in activities that are economically related to nonprofits' primary mission-related outputs. The second is that such increased competition with for-profits may be economically efficient. It may encourage nonprofits to use existing resources to expand the output of ancillary goods that, without differential taxation, would be profitable to produce, but which would not be produced because of nonprofits' aversion to profit-making activities.

Conclusion

A central theme of our analysis is that the effects of incentives operating through the tax system on nonprofits' commercial activities are best understood in a framework that explicitly accounts for the interaction between differential taxation and the following: nonprofit executives who may be averse to commercial activity, donors whose giving may be sensitive to such activity by the nonprofits, and cost complementarities between nonprofit core activities and the

presumptively work to the advantage of the other two organizational forms. The boundaries of tax-induced competition between these organizational forms will shift in response to changes in tax policy. ERTA shifted these boundaries in favor of for-profit corporations, and by implication against unincorporated businesses and nonprofits, while subsequent tax changes had the opposite effect. We are grateful to David Bradford for suggesting this point.

secondary money-raising commercial efforts. Within this framework, differential taxation encourages nonprofits to pursue commercial ventures they would otherwise avoid, by providing excess financial returns that nonprofits can exploit because of their tax-exempt status. The opportunities to earn such excess returns, however, are likely to be greatest in markets for ancillary goods that are related via cost and revenue complementarities to the organization's primary mission-related outputs. This limits and channels the extent to which differential taxation encourages greater commercialism among nonprofits.

The framework also yields several predictions, which we have examined empirically. As expected, we find that the propensity of nonprofit organizations to undertake both tax-exempt and taxable commercial activities depends on the nature of their primary mission-related output and size (as proxied by NTEE industry category and assets); on the relative importance of public versus private contributions; and on the size of the excess return created by differential taxation of nonprofit and for-profit business. We also find that organizations that engage in taxable commercial activities are more likely to apportion joint costs so as to shift such costs from tax-exempt to taxable sources of income.

Determinants of donations in private nonprofit markets

Cagla Okten, Burton A. Weisbrod*

Department of Economics Northwestern University, 2003 Sheridan Road, Evanston, IL 60208, USA Received 1 September 1998; received in revised form 1 June 1999; accepted 1 July 1999

Abstract

We estimate the responsiveness of donations to a number of economic variables, including price, advertising, and the availability of revenue from such other sources as government grants and program service sales. Utilizing a set of IRS data on individual nonprofit organizations in each of seven industries — including hospitals and higher education — for the years 1982-1994, we find distinct overall patterns as well as notable variation across industries. A nonprofit organization's fundraising expenditures are estimated to exert two countervailing effects on donations — the direct, advertising and information, effect augments donations, while the indirect effect, on the 'price' of donating, has a negative effect. We do not find evidence that fundraising is carried to the profitmaximizing levels. In some industries fundraising is substantially short of that level, while in other industries it is excessive, implying that the marginal return to fundraising is exceeded by the cost. Focusing on whether revenue from other sources affects donations to a nonprofit organization, we find evidence that revenue from either government grants or from the organization's own program sales activity generally does not crowd-out private donations. To the contrary, in most industries there are significant positive effects. © 2000 Elsevier Science S.A. All rights reserved.

Keywords: Donations; Crowd-out; Fundraising

1. Introduction

Donations are important for nonprofit organizations because the collective good nature of much of their output limits user fees as a source of revenue (Weisbrod,

^{*}Corresponding author. Tel.: +1-847-467-1235; fax: +-1-847-491-7001.

1998a). In this paper we seek to determine the factors influencing private donations to nonprofit organizations. We test the hypothesis that voluntary giving, which reflects the demand for non-profits' output, is responsive to conventional market variables such as price and advertising, as well as to other sources of income such as government grants and program service revenue.

Weisbrod and Dominguez (1986) estimated the donations' function facing the nonprofit organization in each of a number of industries. They defined the relevant *price* to a donor as the after-tax cost of contributing a marginal dollar of *output*, not simply a marginal dollar. Specifically, they modeled the price of giving as a decreasing function of the percentage of donations used for fundraising, the theory being that donors perceive fundraising costs as not constituting charitable 'output'. In their model, while fundraising has an expected *negative* price effect on donations, it may also have a *positive* advertising effect on donations through the information it conveys to donors. To be sure, donors' knowledge of prior fundraising expenditures as a percentage of donations is incomplete, but such information is available and so it may be embodied in a non-profit's reputation. Weisbrod and Dominguez estimated the effects of both price and information, and both were found in a number of industries.

Using this model, which had been applied to nonprofits in the US, Posnett and Sandler (1989) estimated the determinants of donations for charities in the UK. More recently, Khanna et al. (1995) re-examined the determinants of charitable giving for UK nonprofits using later data and an organization fixed-effects model. Kingma (1995) estimated a similar donations equation for the American Red Cross, analyzing the effects of the nonprofit organization's profit from saleable services on donations to it. Most recently, Khanna and Sandler (1997) allowed for the possible endogeneity of government grants and found evidence that an increase in government grants led to an increase in private donations.

This paper advances research on the factors affecting charitable donations to a non-profit organization in a given industry, along a number of lines.

- 1. We utilize a large panel data set of IRS form-990 returns for nonprofit organizations for the period 1982–1994.
- 2. Recognizing the possible endogeneity of price and fundraising expenditures in a model of revenue from donations, we use a two-stage least-squares, fixed-effects specification to estimate the model consistently.

In the next section we describe a model of the representative nonprofit organization in a given industry. In Section 3 we discuss the variables and develop two empirical specifications. Section 4 describes the data, and Section 5 presents and discusses our estimates of the forces influencing private donations to nonprofits in each of seven industries — higher education, hospitals, museums, scientific research organizations (e.g. the Carnegie Institution of Washington),

libraries, organizations providing services to the handicapped (e.g. the New York State Association for Retarded Children), and those providing services to the poor (e.g. American National Red Cross). Section 6 presents concluding remarks.

2. The model

We view nonprofit organizations as private suppliers of collective goods. Private donors contribute money in return for an implicitly agreed-upon level of provision and quality of output. We hypothesize that potential donors' willingness to provide funds to a particular type of collective good output — which we see as the demand for the collective good — depends, as it does for purely private goods, on price, quality, and the information about price and quality available to the donor.

Following Weisbrod and Dominguez (1986), we assume that donors are interested in contributing not *money* but *output*. This distinction is important for the specification of the price variable, which is discussed below. We assume that donors perceive their marginal contribution to output to be proportional to the amount of money given, *net of fundraising expenses*, and that donors perceive the marginal fundraising expense associated with their particular donations as equal to the nonprofit's average overall ratio of fundraising expenditures to donations.

We assume further that nonprofit organizations are well informed about the qualities of their own outputs and about their 'prices', and that potential donors observe the price of contributing to the output of a particular nonprofit organization but are uncertain about key qualities of the collective output. Thus, nonprofit organizations have an incentive to provide particular information to potential donors about the qualities and marginal social products of their outputs, if doing so will increase donations.

In private-goods markets, the transfer of information on the qualities of a firm's output is often accomplished through advertising (Nelson 1970, 1974). We postulate that in the case of collective goods provided by private nonprofit organizations, fundraising expenditures play the same role. Thus, we hypothesize, following Weisbrod and Dominguez, that fundraising expenditures have two countervailing effects on charitable contributions: they *increase* contributions directly, by reducing information costs for donors, but they may also *reduce* contributions by increasing the price of giving — i.e. by decreasing the average fraction of total revenue devoted to output, as opposed to fundraising. The net

¹Quality includes not only the characteristics of the good or service provided, but also the characteristics of the target recipient group or clientele, such as the poor or children (see Steinberg and Weisbrod, 1998).

effect of these countervailing forces determines the size and sign of the total elasticity of charitable contributions with respect to fundraising expenditures.²

Donations may be sensitive not only to price but to other sources of nonprofit organization revenue. Prior research has considered the possibility that government grants or the organization's self-generated commercial sales, or 'program service revenues', may crowd-out (or crowd-in) private donations (Abrams and Schmitz, 1984; Roberts, 1984; Rose-Ackerman, 1981). This has generated quite mixed findings across studies and industries (Posnett and Sandler, 1989; Kingma, 1995; Khanna et al., 1995; Segal and Weisbrod, 1998). We also control for these other sources of revenue and estimate their effects on donations.

In addition, we consider possible simultaneity in fundraising decisions. Just as fundraising expenditures may influence donations, so may the level of donations received in a given period influence fundraising expenditures. We explore this in the next section.

3. Empirical specifications

We use the following empirical model of the demand for the output of the ith nonprofit organization, in year t:

$$\begin{aligned} \ln \text{DON}_{it} &= \beta_0 + \beta_1 \ln \text{FUND}_{it-1} + \beta_2 \ln \text{PRICE}_{it} + \beta_3 \text{AGE}_{it} \\ &+ \beta_4 (\text{Age.ln FUND}_{it-1}) + \beta_5 \ln \text{GRANT}_{it-1} + \beta_6 \ln \text{PSR}_{it-1} \\ &+ u_{it}, \end{aligned} \tag{1}$$

where u_{ii} is assumed to be distributed independently and identically. We assume that donations to a given nonprofit in 1 year depend on its fundraising expenditures in the prior year, and that each nonprofit organization is willing to accept unlimited donations. The dependent variable, $\ln \text{DON}_{ii}$, is the natural logarithm of the dollar amount of private donations received by organization i in year t. Ln FUND_{it-1} measures the organization's expenditures on fundraising in the previous year. Ln GRANT_{it-1} and $\ln \text{PSR}_{it-1}$ denote respectively, the natural logarithms of government grants and program service revenues that the organization received in the previous year. AGE, the number of years the organization has existed as a nonprofit entity, may affect donations in two ways — directly, as a source of information about organization reputation, and indirectly, by influencing the productivity of fundraising (i.e. through interaction with FUND_{t-1}). We expect

²We assume, as did Weisbrod and Dominguez (1986), that prospective donors assume that the marginal social product of a donation equals the average social product, as measured by the fraction of total organization revenue that is devoted to program services rather than fundraising. Of course, the marginal and average need not be equal and donors may or may not be sensitive to either (Rose-Ackerman, 1982; Steinberg, 1986).

that older organizations benefit from a reputational effect, and that the effectiveness of a given level of fundraising depends on the stock of reputational goodwill.

Ln $PRICE_{ii}$, the natural logarithm of the 'price' of contributing a dollar of output to the organization, is defined as

$$PRICE_{it} = (1 - T)/(1 - F_{it-1}), (2)$$

where T is the marginal income tax rate facing a donor, and F_{it-1} is the share of donations revenue spent by the organization on fundraising in the previous period.

Incorporating this specification of PRICE into Eq. (1) and rewriting, we obtain the equation to be estimated:

$$\ln DON_{ii} = C_0 + \beta_1 \ln FUND_{ii-1} + \beta_2 \ln PRICE_{ii} + \beta_3 AGE_{ii}$$

$$+ \beta_4 (Age. \ln FUND_{ii-1}) + \beta_5 \ln GRANT_{ii-1} + \beta_6 \ln PSR_{ii-1}$$

$$+ u_{ii},$$
(3)

where $C_0 = \beta_0 + \beta_2 \ln{(1-T)}$ and $\ln{\text{PRICE}_{it}} = \ln{(1/(1-F_{it-1}))}$ is the cost to a donor of purchasing an additional dollar of expenditure on output. All the nonprofits we analyze are exempt from profits taxation under section 501(c)(3) of the Internal Revenue Code, and so donations to all of them are deductible to donors who itemize. Thus, our formulation assumes that donors' allocations of contributions among nonprofits responds only to the part of PRICE that reflects the efficiency with which each nonprofit organization turns donations into final output, not on personal income tax rates, T_s^3

We include government grants and program service revenue as additional regressors in Eq. (3) to control for the possible crowding-out (crowding-in) effects of these other sources of revenue on donations. (On revenue interdependencies see Weisbrod, 1998b.) We also include dummy variables to control for the effects on private donations of changes in income tax laws in 1984 and 1986.

In an alternative formulation we estimate a two-stage fixed-effects model. Since our price variable is a function of lagged donations, and current donations are our dependent variable, the single-equation OLS procedure with organizational fixed effects gives biased estimates.

When we introduce organizational fixed effects to our model we have

$$\ln DON_{it} = \gamma_1 \ln FUND_{it-1} + \gamma_2 \ln PRICE_{it} + \gamma_3 AGE_{it}$$

$$+ \gamma_4 \ln GRANT_{it-1} + \gamma_5 \ln PSR_{it-1} + \mu_i + u_{it},$$
(3')

³In the original formulation of the price variable by Weisbrod and Dominguez (1986), an organization's administrative expenses, as a fraction of donations revenue, also entered the computation of PRICE. That is, PRICE = 1/(1 - F - A), where F is the share of fundraising expenditures in donations and A is the share of administrative expenditures in donations. Suitable data on the latter are not available, and have been disregarded in our analysis.

where μ_i is the organizational fixed effect. When we first-difference Eq. (3') the organization fixed-effect disappears, and we get

$$\Delta \ln DON_{ii} = \gamma_1 \Delta \ln FUND_{ii-1} + \gamma_2 \Delta \ln PRICE_{ii} + \gamma_3 \Delta AGE_{ii} + \gamma_4 \Delta \ln GRANT_{ii-1} + \gamma_5 \Delta \ln PSR_{ii-1} + \Delta u_{ii},$$
 (4)

where, $\Delta \ln DON_{ii} = \ln DON_{ii} - \ln DON_{ii-1}$; $\Delta \ln PRICE_{ii} = \ln PRICE_{ii} - \ln PRICE_{ii-1}$; and so on.

Note that applying OLS estimation to Eqs. (3') or (4) are equivalent, and since lagged donations are correlated with the lagged error term, and $\ln PRICE_{it}$ is a function of lagged donations, applying OLS to Eqs. (3') or (4) will yield biased estimates. To overcome this problem we use a 2SLS technique (Anderson and Hsiao, 1981). Specifically, we use lagged variables, $\Delta \ln PRICE_{it-1}$ and $\Delta \ln GRANT_{it-1}$, as instruments for $\Delta \ln PRICE_{it}$.

It is also plausible that in a given year nonprofits decide on the level of their fundraising expenditures taking into account their incoming flow of donations, in which case fundraising is endogenous. With FUND_{it-1} dependent on DON_{it-1} , FUND_{it-1} is correlated with the error term when we use fixed effects. Thus, we instrument $\Delta \ln \text{FUND}_{it-1}$, using the four variables, $\Delta \ln \text{FUND}_{it-2}$, $\Delta \ln \text{GRANT}_{it-1}$, $\Delta \ln \text{PSR}_{it-1}$ and ΔAGE_{it} . In this estimation we omit the interaction term of fundraising expenditures with age because it is highly correlated with $\Delta \ln \text{FUND}_{it-1}$.

We prefer a model such as our two-stage model, which includes organizationspecific effects. Ideally, however, the two-stage model would use instruments other than lagged values of the endogenous variables. We present estimates from both our single equation and two-stage models, making clear when the estimates are, and are not, robust to the choice of model.

4. Data

Our data are from IRS Form 990 samples drawn by the Statistics of Income (SOI) Division of the Internal Revenue Service, for each year 1982–94 with the exception of 1984 when no sample was taken. The SOI samples include all nonprofits that are exempt from taxation under section 501(c)(3) of the Internal Revenue Code (donations to them are tax-deductible on personal income tax returns) and that have assets of at least \$10m, as well as a small probability sample of smaller organizations.

⁴A 2SLS model reduces the significance of coefficients in general. Having highly co-linear variables in the regression causes further reduction in the significance of coefficients.

We undertake time series analyses using lagged regressors to estimate Eq. (3). Since we use lagged variables an organization must be present in the sample in at least 2 consecutive years to be included in our single equation model, and in 3 consecutive years to be included in our 2SLS model, which requires two lags.⁵ The CPI was used to deflate all nominal variables, with 1987 as the base year.

We examine each of the seven industries studied by Weisbrod and Dominguez (1986) — identifying industries, as they did, by the activity codes obtained from the IRS Exempt Organization Master File. The industries are listed in Table 1, along with selected descriptive statistics. We also examine the higher education and hospital industries, using an alternate industry identifier, the National Taxonomy of Exempt Organizations (NTEE), to see whether our results are sensitive to the precise measure of industry composition.

In order to use observations that would otherwise be unusable because ln PRICE would be undefined, we used certain adjustment mechanisms when estimating Eqs. (3) and (4). Following the convention adopted by Weisbrod and Dominguez to deal with cases in which donations and fundraising (in the prior year) were positive and equal, or fundraising exceeded donations, which would imply an infinite PRICE, we set PRICE equal to a large but arbitrary number in those cases — In PRICE=7. When either donations or fundraising expenditures were zero while the other was positive we added an arbitrarily small number, \$1, to the zero amount. If either government grants or program service revenues were not reported or were reported as zero, we again set the values at \$1.

⁵Possibility of lengthier and more complex time lags among variables deserves attention in future research. Since we utilize lagged values of fundraising expenditures as instruments we cannot also treat them as dependent variables. In the OLS model, however, we use twice-lagged values of fundraising expenditures to control for the possibility that fundraising expenditures may have effects that extend beyond the next year. This inclusion does not affect the coefficients on the other variables except for the once-lagged fundraising variable, on which it has a slightly decreasing effect. The twice-lagged fundraising variable is found to be significant (and positive) only for two out of seven industries — hospitals and providers of services to the poor — and is insignificant for the others.

[&]quot;Not shown in the table are changes over time. Fundraising, for example, as a percentage of total revenues, shows a gradual increasing time trend in most of the seven industries studied. In higher education, for example, ratios were in the range of 1.6 to 1.9% between 1982 and 1988, showing no trend, but increased thereafter, to 2.1% in 1989 and to 2.5% in 1994, the latest year for which data are available. Why the stability was replaced by a rising trend deserves further study. In the hospital industry, the fundraising percentage fluctuated in the narrow range of 0.1 to 0.2% throughout the 1982–1988 period, but increased to 0.3% in 1989 and remained essentially stable thereafter.

⁷The National Taxonomy of Exempt Entities, which provides a classification of 501(c)(3) organizations, was developed by the National Center for Charitable Statistics (NCCS), operated by Independent Sector. The Urban Institute, whose web site provides a description and history of the NTEE (Urban Institute, 1998), now runs NCCS.

⁸We also estimated Eq. (3) using only those organizations with non-zero donations and fundraising expenditures. Results remain essentially the same.

5. Results and discussion

5.1. Effects of fundraising

Our estimates of the partial fundraising elasticity, β_1 in Eqs. (3) and (4), appear in Table 2 (for the single-equation model) and Table 3 (for the 2SLS fixed-effects model). They measure the *direct* effect, through advertising and information, of fundraising on donations. For our industry estimates of Eq. (3) (Table 2, column 3) we find this direct effect to be positive and significant, as expected, in all seven industries. The *indirect* effect of fundraising expenditures on donations — the coefficient on the PRICE variable, β_2 — is negative and significant, again as expected, in all seven industries (column 4).

The total elasticity of fundraising, g_f (column 1) captures both the direct and indirect effects of fundraising expenditures on donations. Differentiating Eq. (3) with respect to $\ln \text{FUND}_{it-1}$, and manipulating, we obtain the total fundraising elasticity of donations for organization i in period t as

$$g_{fit} = \beta_1 + \beta_2 Y_{it-1} + \beta_4 AGE_{it},$$
 (5)

where

$$Y_{i,i-1} = \text{FUND}_{i,i-1} / (\text{DON}_{i,i-1} - \text{FUND}_{i,i-1}).$$

The estimates of total fundraising elasticities, g_p , in Eq. (3), evaluated at the mean values for each industry, are shown in the first column of Table 2. Those elasticities are significantly different from zero only for libraries where the sign is positive. (It is significant and positive at 12% significance level for hospitals.)

Turning to our two-stage, fixed-effect estimation (Table 3) we again find, as with the previous model, that the partial fundraising elasticities are significantly positive and the price elasticities are significantly negative. These consistencies hold for each of the three industries — hospitals, higher education, and scientific research — for which the sample size was large enough to be useful. (In the two-stage model almost all coefficients, for industries with smaller samples, lose their significance.) For the *total* fundraising elasticity, however, our 2SLS model estimates are significant for two out of three industries — positive for hospitals and negative for scientific research organizations — in contrast with the insignificant effects estimated for the single equation model. Higher education organizations have an estimated insignificant total fundraising elasticity in both models.

Our findings from the OLS model, of generally insignificant total fundraising elasticities, are similar to those found by Weisbrod and Dominguez (1986) in their

They cannot reject the hypothesis that these nonprofits maximize gross revenue from fundraising.

examination of comparable IRS data at an earlier period, 1972–74. Pooling the data for those years, they found the total fundraising elasticity to be insignificant in all seven industries, implying that non-profits fundraise until the marginal donation raised from a dollar spent on fundraising is zero.

Our findings from the 2SLS model for 1982–94, however, contrast with those found by Weisbrod and Dominguez (1986). This model, with fixed effects, using later IRS data for the same industries, and also using panel data rather than pooled data, discloses that the total fundraising elasticities are significant for two of the three industries examined — though positive for hospitals and negative for scientific research organizations.

Having found that hospitals, (2SLS model, Table 3) and libraries (OLS model, Table 2) exhibit positive and significant total fundraising elasticities, we further test whether they are maximizing *net* donative revenue — net of fundraising costs. A nonprofit organization intent on maximizing the amount of net revenue available for its charitable mission will fundraise until dDON/dFUND=1, provided that revenue from sources other than private donations is independent of fundraising. In that case g_f would equal to FUND/DON (since g_f is defined as dln DON/dln FUND, which equals dDON/dFUND×FUND/DON). When we carry out this test we reject the hypotheses that hospitals and libraries maximize net revenue: they fall short of fundraising that will achieve that end.

Posnett and Sandler (1989), in their cross-sectional study of UK charities in 1985, find evidence for net revenue maximizing behavior for three out of four subsets of UK charities. However, in a subsequent time series study of UK charities for the period 1983–1990, and using a fixed-effect specification, Khanna et al. (1995) find that nonprofits, in the aggregate, fall short of net revenue maximization. Their aggregate results, however, mask variation among industries; they find that two of the same four industries studied — health and overseas charities — do maximize net revenue from fundraising, but religious charities exceed fundraising levels that would maximize net revenue ⁹ and social welfare charities fundraise less than net revenue maximization would imply. Khanna and Sandler (1997) analyzed the same data but took into account the possible endogeneity of government grants, and they found that religious charities are net revenue maximizers, while the other three nonprofit industries fall short of net revenue maximization.

Our new findings about the fundraising behavior of nonprofit organizations — although for a different country, a different set of industries, and a different time period — have some similarities to the two most recent studies for the UK. We find that fundraising does affect donations, both directly and indirectly. The findings that nonprofits in general, do not maximize net revenue, falling short in two out of seven industries and over-spending in others — call for further analysis. Inefficiency is a possible explanation, given the absence, in nonprofit organizations, of owners having residual property rights. Another potential explanation, as noted above, involves revenue interdependencies; the total effect of increased

fundraising may be to increase private donations, but it could also decrease, or increase, other revenue such as from government grants. A third possibility is that nonprofits seek to maximize an objective function that includes more than net revenue — e.g. they may be averse to fundraising activities (Weisbrod, 1998b) in some cases and pro-fundraising in others. Differences among industries remain a puzzle.

5.2. Effects of organization age

The total effect of organization AGE — our proxy for the nonprofit's reputational stock — on donations, for organization i in period t, is derived by differentiating Eq. (3) with respect to AGE:

$$g_{ait} = \beta_3 + \beta_4 \ln \text{FUND}_{it-1}. \tag{6}$$

The estimates of the total age elasticity, partial age elasticity, and interaction of age with fundraising expenditures appear in Tables 2 and 3 for our two models. Again we find noteworthy differences among industries. The OLS model (Table 2) discloses no statistically significant direct effect of organization age on donations (the partial age elasticity) for six of the seven industries, while for the seventh, scientific research organizations, age has a negative effect — a loss of 1% of donations per year of organization age. The 'interaction effect' of age with fundraising expenditures is small, even for the three industries for which it is statistically significant. For libraries, for example, the positive estimated interactive effect, 0.003, indicates that an additional 10 years of organization age, other variables constant, is associated with a 3% increase in the productivity of fundraising — apart from the direct effect of age. For higher education organizations the interactive effect, while also significant, is tiny but negative; an additional 10 years of organization age is associated with a decrease of one-tenth of 1% in the productivity of fundraising.

Turning to the total age elasticity, we estimate it to be significant in all industries in the OLS model (column 2 in Table 2), and in two out of three industries in the 2SLS model (column 4 in Table 3). It is, however, positive in some industries and negative in others.

A negative effect of age on donations is somewhat surprising. Perhaps age is a proxy not only for reputation, which may increase with age, but also for organization wealth, with donors displaying a preference for organizations with less wealth. It may also proxy unmeasured outputs, with younger and less-wealthy organizations being regarded as being less tradition-bound and more contemporary — e.g. a younger scientific research organization that deals with a recent and severe illness, such as AIDS, may attract more donations than an older nonprofit that deals with an illness that donors no longer regard as so important and

deserving of donative support, such as tuberculosis. An organizational fixed-effects model might or might not fully capture such otherwise-unobserved output quality.

5.3. Effects of government grants

It is plausible, a priori, that exogenous changes in a nonprofit organization's revenue from other sources will shift the donor demand function and hence, the willingness of people to give donations. The underlying forces may well be complex. Other things equal, an increase in revenue from government grants should decrease consumers' marginal valuation of output, thereby having a negative effect on private donations — that is, a crowding-out effect. On the other hand, increased government grants could be taken by prospective donors as a signal of government approval and social need, which could bring a positive effect on private donations.

In our estimates of Eq. (3), in Table 2, we find evidence that government grants do not crowd-out donations. To the contrary, they have a positive effect on private donations in six of the seven industries, significantly in four — libraries, hospitals, scientific research, and higher education. Only for non-profits supplying money, goods and services to the poor is there evidence of a significant and negative, crowding-out, effect. When we estimate the 2SLS model with fixed effects (Table 3) we again find positive effects of government grants on donations in all three industries, although they are substantially smaller and less significant; the effect is significant only for hospitals.

Our findings of very little evidence of crowding-out of private donations by government grants to non-profits are consistent with earlier work. For the UK, no evidence of crowding-out has been found in two studies (Khanna et al., 1995; Khanna and Sandler, 1997). Those studies found evidence, as we have, that government grants have *positive* effects on donations to hospitals. They also found such effects for other industries for which we do not have counterparts (health and social welfare nonprofits). Positive effects of government grants on private donations have also been found for the American Red Cross (Kingma, 1995).

5.4. Effects of program service revenue

Just as government grants can affect donor demand for added output, so may a nonprofit's revenue from program services — its own revenue-generating sales activities. As with government grants, both positive and negative forces may operate. Increased program service revenue (PSR) may diminish donations as the marginal utility of output falls. At the same time, increased PSR may stimulate donations insofar as donors wish to reward a nonprofit's self-help, perhaps regarding that as a source of information about management's motivation to pursue its social mission.

We find no evidence that program service revenue crowds out donations in any

industry and with either model; for no industry is there a significant negative coefficient on PSR (Tables 2 and 3). To the contrary, in both models we find evidence of positive, crowding-in, effects for the higher education and scientific research industries. We also find crowd-in effects for arts organizations and hospitals in the OLS model. Again the estimated effects are generally smaller in the 2SLS fixed-effects model.

Prior research also provided no evidence that private donations are affected negatively by 'autonomous income' (which includes income from rent and fees — components of our PSR measure), and some evidence of positive effects (Khanna et al., 1995; Khanna and Sandler, 1997). The study of Red Cross commercial activities, however, did find that profits they generated crowded out donations (Kingma, 1995). One must be careful, however, about the measurement of 'profit' since, being the difference between sales revenue and 'costs', it may include fundraising expenditures.¹⁰

5.5. Effects of changes in tax laws

Significant changes were made in federal tax laws in 1984 and 1986, in ways that affected incentives for charitable donations. The Deficit Reduction Act of 1984 (DEFRA) tightened compliance provisions for charitable contributions by requiring signed written appraisals for contributions of property of \$5000 or more. On the other hand, donations were encouraged through an increase of the limitation on certain contributions to private foundations, from 20 to 30% of adjusted gross income. The Tax Reform Act of 1986 (TRA 86) also had a number of provisions likely to affect private donations. It reduced the tax incentive for contributions by lowering the marginal income tax rates for both individuals and corporations. It also reduced the number of taxpayers that itemized deductions, by increasing the standard deduction and limiting or disallowing certain itemized deductions. In addition, the non-itemizer deduction for charitable donations expired, as previously scheduled, at the end of 1986. Countervailing these negative influences on donations is the income effect of the reduced income tax rates, which increased after-tax incomes (Auten et al., 1992 for a review of the effects of tax reform on charitable contributions).

Thus, in both 1984 and 1986 there were changes having both positive and negative effects on incentives to donate. Coefficients on dummy variables that control for these changes are not reported here but are available upon request. Overall, we find that their effects on private donations differed among industries. For the 1984 tax law changes, we estimated a significant negative effect on

¹⁰Cordes and Weisbrod (1998) show how allocations of joint costs between a nonprofit's 'unrelated' and taxed activities and its untaxed (mission-related) activities can understate the profitability of the former. This can bias the estimated profit from unrelated business activity and, hence, the relationship between profit and private donations to the organization.

donations to libraries and higher education, but not to any of the other five industries. For the 1986 changes we estimated more pervasive effects — again negative and significant for higher education and libraries but also for scientific research organizations, though not for the other four industries.

5.6. Effects of changes in industry identifiers

A question not studied in prior research is the sensitivity of parameter estimates to the precise designation of the 'industry'. We have examined this issue, using an alternative specification of industry. As an alternative to using the 'activity code' designations from the IRS Exempt Organization Master File, codes that are self-reported by each nonprofit but in some cases arguably are out-of-date, we replicated the two-stage model using the industry identifiers provided by the National Taxonomy of Exempt Entities (NTEE). Developed by Independent Sector and its National Center for Charitable Statistics in the early 1980s, it involves an external designation of industry (Urban Institute, 1998).

Applying the NTEE codes to the SOI samples, we re-estimated the 2SLS fixed-effects model for the two largest industries — hospitals and higher education — to see whether results are robust to industry definitions. (Results are available upon request.) For hospitals we find a closer match to the activity code sample — though the NTEE sample is smaller — and our parameter estimates are quite similar. When the NTEE codes are applied to the SOI samples of 'universities, colleges and trade schools', however, there are nearly twice as many organizations in the industry as were identified by their activity codes. Using the larger set of organizations identified by the NTEE identifiers, we find, by contrast with the prior analysis using activity codes, that total fundraising elasticity is positive and significant, and that PSR does crowd-out donations in higher education.¹²

6. Concluding remarks

We sought to shed additional light on the factors influencing private donations to nonprofit organizations in seven industries. Using the US panel data set of IRS form-990 returns for the period 1982–1994 we found, as expected, that fundraising expenditures have two countervailing effects on donations. They *increase* dona-

The NTEE is a mixed notation organization classification system of 26 major groups collapsible into 10 major categories and divisible into over 645 subgroups' (Urban Institute, 1998; see also Stevenson et al., 1997).

¹²When we break our NTEE sample into two components — universities and colleges (including trade schools) — we find significant differences between them. Neither, however, is a close match to the findings from our sample identified by activity codes. Heterogeneity among organizations makes the choice of how to aggregate organizations into an 'industry' quite important.

tions directly, arguably by reducing information costs for donors, but they decrease contributions indirectly, by increasing the 'price' of giving — i.e. by decreasing the average fraction of total revenue devoted to output. The total effect of fundraising, direct and indirect — that is the total elasticity of donations with respect to fundraising — is generally positive. However, we find that nonprofits generally do not devote resources to fundraising at levels that maximize net profit from fundraising. Nonprofits fall short of net revenue maximization in some industries while exceeding it in others.

When we examine the effect on a nonprofit organization's donative revenue of its income from other sources we find little evidence of a negative, crowding-out, relationship. To the contrary, we find substantial evidence of positive effects. Increases in either a nonprofit's receipt of government grants, or revenue from its own program services may provide favorable information to potential donors about the reputation or the trustworthiness of a nonprofit organization. We also find that tax law changes in 1984 and 1986 seem to have had negative effects on donations for several industries.

The heavy involvement of the nonprofit sector in the provision of collective goods poses revenue problems that have traditionally brought reliance on charitable donations. The literature estimating the donations functions for nonprofits in various industries is showing responsiveness of donations to such conventional economic forces as price, advertising, and other revenues in a world of underinformed consumer-donors. While further study is needed, research covering a wide variety of industries in both the US and UK discloses both considerable variations across industries and some consistent overall patterns.

Lewis M. Segal and Burton A. Weisbrod

Introduction and overview

As Chapter 3 outlines, nonprofit organizations' principal sources of finance are donations and sales. That is, they can generate revenue through some form of contribution, or they may sell products and services. Proxy measures for the former are what the Internal Revenue Service terms "contributions, gifts, and grants," and for the latter, what it terms "program service revenues" (PSRs), which include user fees and revenue from ancillary activites. Since we utilize these data extensively, it is important to be clear that PSRs encompass all salesgenerating activities, whether central to the nonprofit's mission or not. Moreover, "mission relatedness" of an activity is determined by the nonprofit and also by the IRS – and these two perspectives may differ. While some activities that generate program service revenues will be treated by the IRS as taxable, because they are unrelated to organization mission, and other activities as related and, hence, not taxable, the nonprofit's own view may differ. It may judge that an activity is not central to its mission even though the IRS considers the income generated nontaxable; similarly, the nonprofit may view an activity as central to its mission even though the IRS determines it to be unrelated.

In the short run, nonprofits have additional sources of revenue – they may receive interest and dividends from investments, and can borrow and draw down assets; but in the long run their financial health depends on their ability to generate donations and to sell services profitably. This chapter asks: Are these two revenue sources – one philanthropic, the other commercial – interrelated? More particularly, does a change in donative revenue – for example, a cut in government grants – influence nonprofits' commercial activity, or vice versa?

We thank the Aspen Institute Nonprofit Sector Research Fund for contributing to support of the research reported here; Ian Domowitz, John Goddeeris, and Richard Steinberg for helpful comments on earlier drafts; and Cecilia Hilgert for assistance with interpreting IRS data. The views expressed here are those of the authors and not necessarily those of the Federal Reserve Bank of Chicago.

We examine the hypotheses that nonprofits' commercial sales activities are mechanisms for financing their principal, tax-exempt mission, and that nonprofits prefer to avoid such activities, engaging in them reluctantly and then only for their profitability. If sales activities are "nonpreferred," there are several testable implications: One, on which we focus, is that those activities are undertaken to a degree that varies inversely with the nonprofit's revenue from the preferred source, donations. If there is aversion to commercial activity, despite its potential financial contribution to the organization's mission, then donations would "crowd out" commercial activities, with decreased donations causing expansion of commercial activity and increased donations diminishing it.

A second testable implication of an aversion to commercial activity is that nonprofits engage in it less than would maximize profit and, hence, less than would maximize revenue to finance their preferred, mission-related activities. Testing this hypothesis is beyond the scope of this chapter, but our results do shed a bit of light on it. One piece of prior evidence is the finding that nonprofits spend less on fund-raising than would maximize their net profitability (Weisbrod and Dominguez 1986; but see also Steinberg 1986). It seems plausible that an aversion to engaging in fund-raising would reflect a larger predisposition to avoid activities that are, themselves, not part of the organization's mission, apart from their net revenue.

If there is aversion to commercial activity, revenue from donations would be preferred to an equivalent sum from profitable sales activity. A plausible conjecture, therefore, is that an exogenous decrease in donations would be offset, but less than fully, by an increase in net, after-tax revenue from commercial activity. To test the magnitude of such crowding out, however, it is necessary to estimate the profitability of commercial sales, the fraction of increased gross revenue from sales that can be used to cross-subsidize mission-related activities. Little is known about the profitability of various nonprofit-sector commercial activities, and meaningful data are unavailable (although Chapter 5 makes a foray into that area).

Theoretical relationships between revenues from donations and from program services

The relationship between revenue from donations and from commercial activity can take a variety of forms, as Chapter 3 indicates. If nonprofits are indeed averse to commercial activity, donations will crowd out commercial activity, and there will be a negative relationship between the two forms of revenue. There could, alternatively, be a positive relationship, "crowding in," if increased commercial activity is viewed favorably by donors and leads to increased donations. In addition to such interrelations between revenue sources, there could

be interrelations between costs: Producing commercial goods and raising donations could be subject to economies of scope. Finally, the two forms of revenue could be independent and unrelated, as would be the case if nonprofits acted as profit maximizers in the commercial markets in order to obtain as much net revenue as possible for support of their missions, and if commercial and mission-related activities were separable in their costs and revenues.

Crowding out of commercial activity by donations is most likely when it involves sale of goods and services that are viewed by the nonprofit's management as most unrelated to the nonprofit's mission – activities engaged in only for their financial contribution. It may also apply, however, to activities that are related to the mission. For example, as Chapter 3 shows, nonprofits frequently, though not always, can demand user fees of the persons they serve in pursuit of their mission. Colleges can charge students tuition, hospitals can charge patients fees, and museums and zoos can charge visitors admission. They may prefer to avoid such user fees, however, lest they inadvertently discourage utilization by persons in the target population (Chapter 4), which would make this revenue-raising source nonpreferred. For-profit firms, by contrast, are presumed to be indifferent among alternative money-generating activities, caring only about the net profitability. Thus, while a private firm would be expected to pursue commercial market opportunities at maximum profit levels, if nonprofits prefer to avoid commercialism they will engage in it reluctantly, whether or not the IRS treats it as taxable and only if the organization cannot obtain "sufficient" donations – in short, only if the net revenue it generates is great enough not only to be profitable (after any tax) but to overcome the disutility of engaging in it.

Contemporary concern about escalating college tuition illustrates the issues and trade-offs. Rising college production costs, not accompanied by offsetting government grants or private donations, have forced choice between retrenchment, on one hand, and raising additional commercial revenue either from user fees or ancillary activities. All are occurring, but along with sharp rises in tuition – "tuition and fees doubling from 1976 to 1994" – has come increasing concern about the effects, including "pricing as many as 6.7 million students out of higher education" (Applebome 1997, A17). In terms of the analytic framework we utilize, public and private donations and grants are the preferred sources of revenue, but their shortfall may have led to increased use of a non-preferred source, user fees. As Chapters 3 and 4 explain, the aversion to user fees as a source of revenue is caused by their negative effect on the target population – in this case, students. This is despite the increased use of price discrimination, in the form of student financial aid, in attempts to minimize the adverse effect of increased tuition on the target population of students.

As the tuition example makes clear, the hypothesis that nonprofits have preferences among alternative revenue sources is separate from legal definitions of "related" and "unrelated" business activities and their differential tax treatment.

For a nonprofit organization there are no tax consequences of obtaining revenue from user fees rather than from donations, although there is a difference to the payers, since donations are tax deductible, at least for itemizers. The nonprofit's preference for donations is the consequence of the hypothesized negative effect of user fees on the organization's mission, not on tax considerations. A mission that encompasses distributional goals, as discussed in Chapers 3 and 4, would cause a nonprofit not to be indifferent between a dollar of revenue from donations and a dollar from user fees.

So, too, a nonprofit may not be indifferent between raising funds through user fees and netting an equal amount through after-tax profit from provision and sale of other, non-mission-related outputs – termed ancillary in Chapter 3. Whatever their legal form, and whether or not the IRS applies the Unrelated Business Income Tax (UBIT) to them, these are activities that are seen by the nonprofit as elements outside of its mission, and in some cases incompatible with that mission. Aversion to ancillary activities may reflect a view that commercialism - acting in ways identified with private firms, and thinking about markets and profitability in their terms - detracts from the spirit and goals appropriate to nonprofits. To the extent this is the case, as noted above, there is no necessary identity between what a tax authority, the IRS, treats as unrelated and what the organization leadership regards as not contributing to its mission. Thus, a nonprofit hospital that decides to open a major heart-transplantation unit, which it expects to generate substantial profit, knows that this will be regarded by the IRS as a mission-related activity, and hence nontaxable, even if the hospital would not be establishing that unit were it not for its profitability.

An aversion to commercial activity has the same effect as a tax on it, increasing the effective marginal cost of production and thus decreasing the effective marginal profit from commercial activity. This leads to our central hypothesis:

Commercial activity in any form – whether involving user fees or expansion into ancillary markets – can be expected to be sensitive to the level of donations, changing inversely to it.

This chapter examines the microeconometric empirical evidence to determine whether there is a negative causal relationship between donations and commercial activity. We do not study separately revenue resulting from UBIT activities and from untaxed activities, which are aggregated in program services (but see Chapter 5, which does examine some relationships between the two).

During the 1980s the nonprofit sector, as a whole, became increasingly reliant on sales revenue relative to donative revenue. As Table 6.1 shows, "contributions, gifts and grants" (donations) to charitable (501(c)(3)) organizations from both private and government sources declined as a share of total revenue between 1982 and 1993, while the share from program services (sales) grew.

Table 6.1. Revenues from donations^a and from commercial activities for charitable 501(c)(3) nonprofits, 1982–93^b (in billions of constant dollars)^c

		Total revenues	Component as % of total revenue			
Tax year	Donations (CGG)		Total CGG	Private CGG	Govt. CGG	Program service revenue (PSR)
1982	\$42.79	\$203.42	21.0	11.2	9:8	63.4
1983	46.59	231.78	20.7	10.9	9.8	65.9
1985	51.83	249.43	20.8	11.3	9.4	62.6
1986	54.85	266.86	20.6	12.9	7.6	64.3
1987	54.30	273.56	19.8	11.7	8.2	68.2
1988	58.38	299.79	19.5	10.9	8.6	67.5
1989	61.70	320.73	19.2	10.8	8.5	68.4
1990	64.80	332.25	19.5	10.9	8.6	70.6
1991	63.71	359.54	17.7	9.8	7.9	70.3
1992	71.80	383.15	18.7	10.2	8.5	71.0
1993	70.78	390.63	18.1	9.9	8.2	71.3

^aReported to the IRS as "contributions, gifts, and grants" (CGG).

Source: Entries for 1982 and 1983 are derived from Hodgkinson et al., Nonprofit Almanac 1992–1993. San Francisco: Jossey-Bass, 1992, tab. 4.5. Entries for 1985-93 are authors' calculations from the IRS, Statistics of Income Division, data tapes.

Of course, revenue, whatever its source, is not equivalent to profit. The true margin of expected net revenue from any source is an important determinant of a nonprofit's choice among revenue sources, but evidence is difficult to obtain. What we expect, but cannot test, is that organization mission will cause differential preferences among potential sources, so that it will not be the case that marginal profitability from all sources will be equated, let alone equated with the opportunity cost of capital.

In our theoretic framework we emphasize this distinction between the non-profit's preferred and nonpreferred activities: The organization prefers to engage in its mission-related pursuits; it becomes involved in revenue raising, a nonpreferred activity, only as necessary to achieve its mission. Some donations may come to the organization with little or no effort, but such exogenous income may be judged by the nonprofit to be suboptimal and lead it to devote resources to increasing contributions or to profit-making commercial activities. Fund-raising to garner additional contributions and program services to garner sales revenues are quite similar in their goal, which is largely to generate re-

^bExcluding 1984, for which data are not available.

 $^{^{}c}$ All dollar values are deflated by the Consumer Price Index for All Urban Consumers (1982–4 = 100).

sources that would permit expansion of the mission-related activities. This also is the intention behind user fees, as discussed above.

Seldom is a source of revenue entirely exogenous, entirely independent of organizational effort. We judge, however, that there is a greater measure of such independence with respect to contributions, gifts, and grants (CGG) than for commercial sales revenues. Changes in federal government funding of grants to hospitals, universities, and arts organizations, for example, can dramatically change donative revenue, as has been the case recently with sharply diminished federal grants to the National Endowment for the Arts ("Republican Effort to Eliminate Arts Agency Survives Challenge" 1997) and to public television (see Chapter 13).

In a later section we turn to empirical tests to determine to what extent, if any, nonprofit commercial activity in the form of program service revenue is a response to changes in exogenous revenue from donations. Difficulties emerge as we look for operational counterparts to the concepts of preferred and nonpreferred sources of revenue, and the differential tax treatment of various forms of revenue creates another force affecting organization choice among alternative sources of revenue.¹

Available data from the IRS Form 990 return (Appendix) provide proxy measures that map (imperfectly) to the aforementioned theoretic concepts: CGG to the preferred, unconstrained revenue sources, and PSR to the nonpreferred revenue sources that involve activities, including commercial sales, sometimes seen by nonprofits as digressions from their missions.

Our concept of a nonprofit's commercial activity encompasses all endeavors that involve a transaction with a consumer paying for output received. Payment, of course, is a matter of degree. A "pure" nonprofit organization is one that finances production entirely through unrestricted donations generated costlessly and distributes its charitable output, at a zero price, to all "deserving" persons: Output is simply given away. This polar case is the ideal for two reasons:

- 1 Only with a zero price can the organization be reasonably assured that no deserving person is being denied access to its service, although some nonprice form of rationing might be required if the total quantity available is insufficient.
- 2 Only by remaining free of commercial activity can the nonprofit concentrate its managerial resources on providing services rather than on debates over the appropriateness of engaging in the sale of other goods and services in order to raise money.

¹ "Contributions, gifts, and grants," as reported on the IRS Form 990 information return, sometimes constitute what we would term *sales* – e.g., for the naming of a building at a hospital, college, or community center. At the same time, some revenue reported as sales – "program service revenues" on the Form 990 – has a substantial donative element, as when consumers pay more for a service provided by a nonprofit than they would pay to a for-profit firm.

In the contrasting case, typical of a private firm, the organization receives no donations, gives away nothing, and charges a profit-maximizing price for its output. The distinction between a nonprofit's reliance on donations and on revenue from sales is central to this chapter's focus on whether donative revenue crowds out program service revenue.

Actual nonprofit organizations are arrayed on a continuum in terms of the percentage of revenue they derive from sales. The purely donative nonprofit derives none of its revenue from sales (Hansmann 1980); at the opposite pole are nonprofits that derive all of their revenue from sales. One index based on this finance-source characteristic is the *collectiveness index*, the proportion of an organization's total revenue derived from donations (see Weisbrod 1988 for discussion and application). Table 6.2, based on IRS tax data for charitable nonprofit organizations in 1987, displays a complementary metric: the proportion of total revenue that comes from commercial sources. Its value varies substantially by industry, with health organizations being the most commercial (with sales accounting for 89 percent of total revenue) and community-improvement organizations being the least (only 11 percent).

The more use a nonprofit organization makes of prices to raise revenue, the more it is emulating the private sector; whether such commercial activity takes a form that involves competition with the private sector is another matter. Chapter 1 shows how nonprofits' commercialism takes both forms, and Chapter 9 illustrates well the growing collaboration between universities and private enterprise in scientific research. The current chapter attempts to explain the forces affecting the commercialism of the nonprofit sector – its increased dependence on revenue from sales – independently of whether it involves competition or cooperation with for-profit firms.

We have reviewed, within the context of the multiproduct model presented in Chapter 3, building on James (1983), the reasons for expecting one or another relationship between the level of a nonprofit's commercial activity and its revenue from donations. One analytic perspective indicates that exogenous contributions and commercial activity will be either unrelated or inversely related, depending on the degree to which commercial activity itself, apart from the revenue it generates, detracts from the goals of the nonprofit; but other perspectives suggest positive relationships between donative and commercial revenues. We explore several of these possibilities, including the effects of a change in service provision by other organizations, economies of scope in production, complementarities in revenues, and price rationing of output.

The section on the empirical relationships between donations and sales uses our newly developed panel of tax-return data covering the period 1985–93 for large nonprofit "charitable" – 501(c)(3) – nonprofit organizations. Much of the prior empirical research on the mix of revenue sources used cross-sectional data and focused on a single industry, such as universities (James 1983) or social-service agencies (Schiff and Weisbrod 1991). We examine each of five indus-

tries, using a variety of techniques. The panel data permit us to consider time lags and organization-specific effects.

Our findings may be summarized as follows:

- 1. Aggregate trends for the panel show that although sales revenues are increasing faster than donative revenue, both have increased in real terms. We attempt to determine whether the slower rate of growth in donations caused any part of the increase in commercial activity. We begin by documenting the positive cross-sectional correlations between contributions and sales. Not surprisingly, there is a scale effect such that larger organizations tend to receive larger amounts of revenue from each type of source, donative and commercial. The panel nature of the data lets us control for organization-specific attributes of the nonprofit that do not change over time, including the scale of the organization, its geographic location, and its efficiency.
- 2. Controlling for organization-specific (fixed) effects, for the full panel of nonprofits, we find a significant negative relationship between donations and

^bThe UBIT return, Form 990-T, is required for all nonprofits that receive at least \$1,000 in gross unrelated business income in a given year.

sales revenues, consistent with the theory that nonprofit organizations have an aversion to commercial activity.

- 3. Taking a longer view, we also examine the relationship by using the change in three-year averages, 1985–7 compared with 1991–3, and again find a strong negative relationship.
- 4. All of these approaches assume that donations are exogenous, an assumption we relax in two ways. First, we use fund-raising expenditures to remove, or instrument out, whatever portion of donations is within the organization's control. These expenditures prove to be an important influence on donations: Current and lagged values of fund-raising expenditures, in conjunction with firm-specific effects and lagged contributions, explain about a third of the year-to-year variation in donations. Second, we use lagged donations, rather than current donations, as a regressor to explain the extent of commercial activity. These produce some changes but do not alter the overall tenor of our findings. Regression analyses based on log values of the dependent and independent variables, however, reveal substantially smaller results, near zero and even positive for some industries.
- 5. Finally, we employ a statistical test of causality that allows for a feedback effect whereby variation in sales revenues causes changes in donative behavior, and that also allows both donations and commercial activity to be simultaneously affected by unspecified and unmodeled forces, such as government spending, changes in the economic environment, or changes in need. The perspective presented in Chapter 3 and summarized above portrays nonprofit organizations in two dimensions: the types of services they produce and their sources of revenue, with the two being related. Thus, anything altering the donative revenue that a nonprofit realizes without its having to produce the nonpreferred output would affect the level of commercial activity in the opposite direction. A drop in government grants, such as has affected many of the nonprofit subsectors examined in Part II of this volume, is likely to bring expansion of nonpreferred commercial output, other things equal. That prediction of a negative relationship could be reversed, however, if, as is also noted in Chapter 3, there were more complex interdependencies, so that a change in commercial activity had further effects.

In addition to direct effects of donations on commercial activity, there could also be reciprocal effects, of commercial activity on donations. These would be positive if donors favored nonprofits' self-help, revenue-raising efforts and rewarded them, or negative if donors disapproved of commercial activity.²

In addition to revenue interdependencies, there could be cost interdependencies. If the production processes are complementary, an increase in ancillary-

² In the latter case, this effect would strengthen the expectation of a negative relationship between donations and sales.

good production will decrease costs for the mission-related outputs, thereby reducing revenue needs. Because of such interdependencies of costs and revenues – about which little is known – an exogenous decrease in donations could have a positive, negative, or zero effect on commercial activity, even if the direct effect we hypothesize is negative. In such cases of interdependent revenues or costs, the effect on the nonprofit of an exogenous change in donations would be to shift the donations function or the cost function for the preferred good. Thus, reality may be more complex than our simple model. No strong prediction can be made.

Little is known regarding whether managers or donors are indifferent as to the nature of the nonprofit's revenue-generating tactics, and whether they generally regard commercial activity as detracting from the organization mission, apart from the revenue generated. Anecdotal evidence, however, suggests that nonprofits do sometimes forgo opportunities to obtain added revenue because they prefer to avoid engaging in those activities. For example, recently Oxford University turned down a gift of \$34 million, to establish a new school of business, apparently because it reached a judgment that a business school was incompatible with its mission – that is, "with the historical values of the university"; the view was expressed that "education should prepare people for public service, not profit" (Ibrahim 1996). It is not clear, however, whether such decisions reflect a sense of organization mission or a recognition of effects on other donors.

It is hard to say which set of assumptions about organization objectives, revenue interdependencies, and cost interdependencies is more likely. Moreover, we conjecture that the more likely set differs across industries: Donors to arts organizations, hospitals, colleges, and antipoverty activities need not respond in the same way to increased commercial activity in ancillary markets. Similarly, opportunities for nonprofits to utilize their preferred-good inputs to expand production in ancillary markets may well be more limited in some industries than in others. Day-care centers, for example, employ inputs that are quite specific to use by young children and are in use for much of the day and even evenings, and so appear to have relatively little potential for utilization in ancillary revenue-generating activities. Hospitals are more promising loci for production of ancillary outputs, as they provide services that involve a wide variety of inputs for inpatients and outpatients, health-care related but also involving food preparation, laundry, television rental, and so on, and that have substantial excess capacity.

Changes in provision of the preferred service by other suppliers

The multiproduct model is extendable in several directions that provide further insight into the relationship between contributions and commercial activities.

We consider the case of a nonprofit that is concerned with the aggregate level of provision of the preferred good, not simply with its own production. An exogenous decrease in production by others would raise the marginal utility schedule for the nonprofit's own production, and its desire to increase production.

Would this cause the organization to engage in more commercial activity? Again, the answer depends on whether the commercial activity is a neutral or a nonpreferred activity. A decrease in provision by government agencies or by other nonprofits has essentially identical implications for a specific nonprofit organization as we described for a fall in the organization's revenue from donations. In all these cases the effect is to increase the marginal utility of the nonprofit's preferred output and, hence, to cause it to pursue added revenue more aggressively. Diminished donations, ceteris paribus, reduce production of the preferred good, moving the organization back along its marginal utility schedule to a greater marginal utility of output. A fall in exogenous provision shifts the entire schedule outward, again increasing marginal utility from added output of the preferred good. The result in both cases is an increase in the marginal utility of the preferred output, which could be great enough to overcome the disutility from additional ancillary commercial activity. Thus, we expect such commercial activity to be correlated negatively with a decline in provision by other agencies and organizations. Again, however, this result relies on commercial activity being nonpreferred, and it could be strengthened or weakened by revenue and cost interdependencies, as explained above.

Analogous to a change in other providers' output of the preferred good would be a change in the overall magnitude of social "need" for the nonprofit's services. To see this, consider a nonprofit social service agency that observes an increase in poverty. This would be equivalent to a decrease in other suppliers' – nonprofit or governmental – provision of antipoverty services, and it would increase the willingness of a nonprofit organization to initiate or expand production of profit-generating ancillary goods. As we have noted, it could also increase private donations. If such a simultaneous increase in both sources of revenue occurred, it would not reflect a change in one causing the change in the other, but the simultaneous effect on both revenue sources of the exogenous change in need or in production by others of the preferred good. The point, which becomes important when we turn to the empirical work, is that findings of correlation or, for that matter, lack of correlation, between donations and commercial activity can reflect many plausible scenarios and, hence, are difficult to interpret.

Price discrimination in the provision of preferred goods

Nonprofits' commercial revenue from "sales" can come not only from sales of an ancillary, nonpreferred good, but also, as we pointed out earlier, from fees

charged to consumers of the preferred, mission-related good. Thus, a positive correlation between donative and commercial revenue may also result from the increased use of price as a rationing mechanism for preferred goods. Access to preferred goods that are of the private-good type can be rationed by varying price according to recipients' perceived ability to pay, while also taking account of the nonprofit's target consumers — those it seeks to help the most.

Thus, a decrease in, say, government grants could cause nonprofit hospitals to charge private-pay patients more; and colleges could increase their full tuition, collecting more from students with the greatest demand while increasing financial aid to those with more elastic demand, possibly leaving their net prices unchanged. Such price discrimination might be interpreted as a form of non-preferred activity, engaged in reluctantly, at less than profit-maximizing levels, thus being responsive to exogenous changes in revenue. Nonprofits that have distributional goals, seeking to provide the preferred output to particular beneficiaries, can choose to use additional donations to cut prices below marginal cost to their target consumers. (For further analysis of price discrimination by nonprofit firms with distributional goals, see Chapter 4 and Steinberg and Weisbrod 1997.) Recognizing the role of prices and price discrimination of preferred goods is important, for nonprofits' commercial (i.e., private-enterprise-like) activity is not limited to markets for ancillary goods.

Price discrimination cannot be used, however, for preferred goods that are collective in nature. Universities can discriminate in their pricing of education, a private-type preferred good, but cannot do so in their provision of collective goods, such as basic research. Zoos can discriminate in admission fees to viewers, but not in their provision of the collective good, animal species breeding. (For an analysis of commercialism in zoos and aquariums, see Chapter 11.) Nonprofits whose missions are to provide collective goods have little opportunity to charge user fees, and so their options are more limited.

In light of the complexities we have discussed, it is not surprising that our findings, reported in the next section, indicate no simple and consistent pattern. There is considerable variation among industries, some showing negative effects of donations on their commercial activity, but others showing positive effects, and still others showing none. In addition, findings are not entirely robust to alternative specifications. Negative relationships between donations and commercial activity are found in some specifications, although by no means uniformly. The industry studies in Chapters 8–13 further demonstrate the variation in provision of ancillary outputs and in dependence on user fees.

The empirical relationships between donations and sales

A crude measure of a nonprofit's ancillary activity is its engagement in moneyraising activities that the IRS regards as unrelated to their tax-exempt mission,

thereby generating income that is subject to the UBIT. Table 6.2 (see the previous section) shows, for 1987, wide variation in the percentage of nonprofits in each industry that reported such income, ranging from 1.2 percent in the youth-development sector to 9.2 percent in the health sector. Our empirical analyses in the next subsection suggest a pattern, but one that varies among industries.

We assembled the panel data used for this study from Internal Revenue Service Form 990 tax returns collected annually between 1985 and 1993. The sampling scheme used by the IRS Statistics of Income (SOI) Division is based on the asset level reported on the nonprofit's tax return. The composition of the SOI sample varies from year to year, with larger (greater asset) nonprofits being more likely to be included than smaller ones. Although the sample varies over time, all organizations with more than \$50 million in assets (not controlling for inflation) are included each year. Our analysis uses the "balanced" panel of the 2,679 nonprofit firms observed in all nine years. These large organizations, though only a small percentage of all nonprofits, represent a substantial portion of the total assets and revenue activity in the nonprofit sector.

There are two sources of possible bias from the use of this panel of nonprofits. First, in addition to the fact that nonprofits with low asset levels are underrepresented, only "surviving" organizations are included; that is, organizations that cease to exist or, for any other reason, do not file a return in any of the sample years are not in the panel. Similarly, nonprofits that are "large" (over \$50 million in assets) in some year but not in others are excluded from the panel if data for them are not available in the years when their assets fall below the threshold. Nonetheless, the relationship between organizational revenue from sales and from donations (referred to in the IRS Form 990 returns as "contributions, gifts, and grants") is worth examining for this important subset of non-profits. Our findings will not necessarily be generalizable, however, to the full population of nonprofit organizations, most of which are small. There is, on the other hand, a positive dimension to the limited sample: The focus on large organizations provides a degree of homogeneity that is useful given the limited information available from the tax returns.

Two-thirds of our panel consists of nonprofit organizations involved in health and education activities, as characterized by Independent Sector using their National Taxonomy of Exempt Entities, which has been adopted by the IRS. Table 6.3 presents the industrial distribution of the organizations studied. We analyze first the combined sample of all organizations, and then the nonprofits in each of the five industries for which the panel includes over a hundred organizations – specifically, hospitals (NTEE code E22), which are approximately 70 percent of the health category (code E), and universities (code B43), which are about 40 percent of the education category (code B), along with housing and shelter, human services, and arts, culture, and humanities.

-\$32.4 million – in program service revenues. The size and relative importance of these revenue sources varies widely by industry: The average hospital is far more commercial, receiving only \$1.3 million in contributions but having \$57 million in sales revenues. At the other extreme, the average arts organization in our panel received more than twice as much in contributions as in sales revenues. Row 5 of the table displays the fraction of firms filing a Form 990-T tax return, reflecting their receipt of revenue from unrelated business activities. This measure again discloses great variation among industries in their involvement in commercial activity, in this case with unrelated ancillary activities: More than a third of hospitals and universities filed a UBIT return, compared to only 5 percent of the housing and shelter organizations.

Such variation in commercial activity is consistent with our prior view that because of the differing technologies of production in the various mission-focused activities, there would be variation among industries in their potential not only for developing profitable markets for ancillary goods, whether legally related or unrelated, but also in their opportunities to generate revenue from user fees for mission-related activities. At the same time, these findings are also consistent with other models, such as that organization objective functions, including aversion to ancillary activities and to user fees for mission-related activities, differ across industries.

Between 1985 and 1993 the revenue from each of the two principal sources, contributions (i.e., CGG) and sales, increased substantially in constant dollars. Contributions, gifts, and grants to nonprofits in our panel grew by more than 21 percent (row 6), but sales grew 61 percent (row 7), nearly three times as much. There has, indeed, been increasing reliance of nonprofit organizations on commercial activity. Consistent with this view, the fraction of nonprofits filing a tax return for unrelated business activity increased from 23 percent in 1985 to 38 percent eight years later.

This upward growth trend, however, masks variation over time: Although average real contributions grew continuously for our panel of nonprofits, there was variation from year to year in that growth. Moreover, in any particular year many nonprofits did not experience growth, with 40–60 percent of the sample experiencing a decline.

The discussion of the earlier section, "Theoretical relationships between revenues from donations and from program services," suggested that a decline in exogenous donations to a nonprofit organization may cause it to turn, if reluctantly, to increased commercial activities in order to cross-subsidize its preferred activities, implying a negative "crowding out" relationship between donations and commercial activity (see also Chapter 3). Other parts of the analysis, however, suggested a positive, "crowding in" relationship, due to such additional forces as the possible effects of commercial activity on donations and the abil-

ity of the organization to utilize the resources from its preferred goods in the production of ancillary goods.

To test these relationships we apply a more disaggregate, microlevel analysis. We begin by describing the methodology and results for the full panel of organizations in Table 6.5. The panel data permit us to examine changes over time while controlling for unobserved organization characteristics that do not change over time; that is, we employ a "fixed-effect" regression model that

^bLog-log regression models use zero in place of log(0).

Tests are based on a vector autoregression with firm fixed effects, and two lags of contributions, program service revenue, and fund-raising expenditures. Longer-lagged values are used as instruments.

^{*} Statistically significant at the .10 level.

^{**} Statistically significant at the .05 level.

takes into account characteristics of each organization that, although not directly observable, are specific to the organization over time.

Our findings indicate that unobserved heterogeneity among organizations is of major importance. Rows 1 and 2 of Table 6.5 present the regression estimates of the effect of a one-dollar increase in contributions on the contemporaneous level of sales, with and without inclusion of a firm-specific component; the results differ significantly and substantially. The regression without the fixed effect estimates that a one-dollar increase in contributions is associated with a seventy-six-cent increase in sales activity – no crowding out effect here. We believe, however, that this estimate reflects scale differences across organizations such that larger organizations receive more revenue, both commercial and donative, than smaller ones. The regression estimate reflects a positive correlation due to scale but does not reflect causality. Inclusion of fixed effects, which we believe to be important, results in a statistically significant negative coefficient on contributions. As implied by the cross-subsidization model with aversion to commercial activity, changes in total contributions are negatively correlated with changes in gross sales revenue.

The negative result for the fixed-effect model in the pooled sample of organizations is robust to a variety of alternative specifications, including the addition of time-trend variables to capture aggregate economic conditions (row 3), the inclusion of fund-raising expenditures in an attempt to deal with the possible endogoneity of donations (row 4), and the use of a one-year lagged independent variable instead of contemporaneous donations to deal with endogeneity as well as effects over time (row 5). Controlling for the endogenous portion of contributions somewhat increases the negative relationship between donations and sales. The coefficient displayed in row 5 of Table 6.5 suggests that a one-dollar decline in exogenous donations causes an increase in commercial activity of forty-three cents, although the profit available to cross-subsidize preferred activities is surely less.

As a further robustness check we estimate the model in logs rather than levels, with (row 7) and without (row 6) fixed effects. These results are much closer to zero, suggesting that large values – which receive relatively less weight in the logarithmic formulation – have significant influence on our estimates, even though the data sample is already limited to organizations with large amounts of assets, and even though we used fixed effects. The log–log model with fixed effects again produces a negative coefficient, but it is not statistically significant. The interpretation of the estimate in row 7 is that a 1 percent decrease in donations causes a 0.02 percent increase in commercial activity.

The effect of changes in contributions on sales activity might well depend not on single-year, transitory changes, but on changes expected to be "permanent." The single-year changes might measure fluctuations that are smoothed across time, which may induce fluctuations in assets rather than sales. More-

over, data for any given year can be misleading, since year-end donations may sometimes be reported in the next year. To address these concerns we use three-year averages of the data in the regression model. That is, for each nonprofit we form the average of gross sales and of contributions for 1985–8 and, again, for 1991–3; then we compute the change in each variable between the two periods, thereby smoothing effects that might result from, say, a large amount of donations arriving either shortly before or shortly after the end of a nonprofit's fiscal year. Row 8 of Table 6.5 presents these estimates based on a specification in levels. The result, again, is strongly negative and statistically significant. However, the log-log specification (row 9) continues to produce a statistically insignificant result.

The difference between the level and log specifications led us to explore the data further. We noted that there were particularly large fluctuations involving transitions to or from zero contributions. For example, the returns for the New England Medical Center Hospital (EIN 042374071) report contribution above \$20 million per year for 1985-8, zero contributions for the next two years, and then contribution levels above \$40 million for the next three years. Perhaps such zeros are reporting error; perhaps they reflect large transitions of organizations undergoing radical change - we do not know how to explain such anomalies. Moreover, although the Internal Revenue Service scrutinizes tax returns for internal consistency, it does not examine the consistency of the returns over time. In order to reduce the effect of large transitions involving zero contributions, we repeated the long-run analyses, omitting from the estimation of mean contributions any reported zero. Thus, if an organization had two years with positive donations followed by a year with zero, we used the two positive values but excluded the year with the zero contributions. As we expected, the estimates for the effect of contributions on sales are somewhat smaller in absolute value than had been found when the zero observations were included, but they remain largely consistent with the earlier analysis.

Overall, we find somewhat mixed relationships between an organization's donative income and its revenue from sales. For the aggregate sample, Table 6.5 shows that a number of formulations, particularly those employing firm-specific effects, indicate significant, negative relationships (lines 2–5), whereas others, based on log values, show effects that are negative but insignificant (lines 7 and 9) or, in one case, positive and significant (line 6). The differences between relationships observed in levels and in logs are noteworthy. For reasons not well understood, there seem to be larger absolute responses, but smaller percentage responses of sales activity.

Negative relationships in Table 6.5 generally show effects less than unity. At the outset of this chapter we conjectured that when nonprofits use commercial activity to replace lost CGG, they replace them only partially. Moreover, since commercial revenue is only partially profit, the replacement rate is even lower

than is indicated by the coefficients on sales. This finding is consistent with the hypothesized aversion to commercial activity, although we cannot be certain as to the influence of cost and revenue interdependencies.

The structural regression models employed thus far assume that causality runs from donations to sales. Explanations put forth in the theory section, however, suggest that even if causation does run in that direction, it could simultaneously run in the reverse direction - fluctuations in commercial revenue affecting donative revenue – or that both variables could be responding to a third variable omitted from the analysis. One way to detect such relationships is to use a system of simultaneous equations to determine whether fluctuations in one variable precede fluctuations in the other, after controlling for all other available information. A statistical model that provides a test of such so-called Grainger causality is the panel vector autoregression described in Holtz-Eakin, Newey, and Rosen (1988). Using it, we relate current sales activity to the preceding two years' data on donations, fund-raising, and sales revenue. Separately, there is an equation with donations as the dependent variable and the same set of regressors. All of the data are first-differenced – that is, differences between years are used – to remove the firm-level effect we identified as important in the earlier analyses. This transformation, combined with the presence of a lagged dependent variable, produces a correlation between the error term in the regression and the transformed right-hand-side variable that is eliminated using earlier data as an instrument. That is, we regressed the change in sales activity in year t on the changes in sales, contributions, fund-raising, and assets in years t-1 and t-2 while using the data prior to t-2 as instruments.

Using this technique on the data for all industries, we find evidence that contributions statistically cause – that is precede – changes in sales, but sales do not cause contributions. The causality tests in row 12 of Table 6.5 reports the significance level of a joint F-test measuring the degree to which lagged contributions are a significant predictor of current sales after controlling for the organizational fixed effect and prior values of all the variables.

Industry-specific effects of donations on sales revenue

Results for five industry subsamples are presented in Table 6.6, which we have limited to the most important specifications. These five subsamples constitute 55 percent of our aggregate sample; the balance consists of nonprofits (shown in Table 6.3) in industries for which samples are quite small.

Our findings for the housing/shelter and arts/culture sectors largely match the aggregate estimates – in our preferred, fixed-effect, formulations (rows 2 and 4) – in both the nonlog and log estimates. The estimates from the log-log specification, insignificant for the combined sample, are negative and statistically significant for the two industries (row 4).

Table 6.6. Regression analysis by industry of balanced panel of 501(c)(3) tax returns, 1985-93

Longer-lagged values are used as instruments. * Statistically significant at the .10 level.

** Statistically significant at the .05 level.

Source: Authors' calculations from the IRS, Statistics of Income Division, data tapes.

For the other three industries, however, findings are quite different. Between contributions and sales for universities and human-service organizations, we find relationships that are both positive and statistically significant, but the relationship is essentially zero for hospitals (row 2). The log estimates (row 4) are also positive and significant, except for in the case of universities, where there is no significant effect. These three industries comprise 44 percent of our aggregate sample. The fact that we find positive relationships between contributions and sales for them, but negative relationships for the aggregate, indicates that there are many organizations in the panel that exhibit negative relationships in industries where samples were too small to analyze.

The association of increased donations with increased, rather than decreased, commercialization in an industry is not consistent with the simple multiproduct organization model in which commercial activities are disliked. It is consistent, however, with that model if, in those industries, there are economies of scope in production – that is, cost complementarities or complementarities in revenue. As we explained earlier, there is no reason to believe that such interdependencies are equally important across industries. We also noted other circumstances that could elicit a finding of a positive relationship between donations and sales, even if commercial activity is disliked; for example, a reduction in government grants could cause a simultaneous increase in private contributions and commercial activity. There is a clear need to learn more about both cost and revenue interdependencies in nonprofit organizations before it will be possible to state with confidence the effect on commercial activity of changes in some source of donative revenue.

The results of tests of causality from commercial activity to donations also vary by industry. Rows 7 and 8 indicate that fluctuations in donations affect commercial activity in the housing sector, while in the university sector it appears that the driving force is the reverse, from sales to donations. In two industries, hospitals and arts, there is no evidence of causation in either direction, suggesting that both donations and sales are being influenced by a third factor. In another industry, human services, there is evidence of significant causation running in both directions.

Concluding remarks

The appropriate model for nonprofit behavior remains far from settled. So, too, is an understanding of how nonprofits come to have particular combinations of revenue from donations and from sales of goods and services, and particular combinations of revenue from mission-related and unrelated activities. However, a multigood production model, in which nonprofits determine the extent of activity in several sectors, is promising. Using data for 2,679 nonprofits observed from 1985 to 1993, we estimated a set of structural and reduced-form

models that suggest that exogenous declines in donations yield significant increases in commercial activity for some industry sectors but not for others. The results vary considerably by industry, a finding that is understandable in light of differential organization goals as well as differences in interdependencies among revenue opportunities and in cost interdependencies between mission-related and ancillary goods production. Our findings indicate strongly the need for more analyses of output and revenue determination in specific industries where nonprofits play a major role.

Several questions raised during the analysis require further research. First, within our model of nonprofit behavior, contributions are considered exogenous. Relaxing this simplification involves determining the extent to which organizations can influence contributions, including the effect of a nonprofit's commercial activities on willingness of individuals and organizations to give it donations, and the extent to which other unspecified events affect both sales and donations. For example, changes in sources of sales revenue, such as through the adoption of Medicare and Medicaid in the health industry, can affect organization behavior and, in turn, the supply of donations (including volunteer time). Second, a dynamic model of behavior suggests that nonprofits may draw down assets in response to exogenous transitory fluctuations in donations.

Debate over whether government spending on social welfare programs has crowded out private donations, so that current and prospective reductions in government support will lead to increased private donations, illustrates the importance of these issues. In addition, our findings that reduced donations have quite different effects on commercial revenue-raising activity in the higher-education, hospital, arts, housing, and human-services components of the non-profit sector highlight the danger of generalizing about the responses of the sector, as a whole, to exogenous changes in donations.

Getting It Right: Verifying the Classification of Public Charities in the 1994 Statistics of Income Study Sample

Nicholas A. J. Stengel, Linda M. Lampkin, and David R. Stevenson

haritable organizations play a vital role in this country. They include health, human services, arts and culture, education, research, and advocacy organizations and range in size from the neighborhood homeless shelter to the largest hospitals and universities in the United States. Because of the wide range of activities, services, and programs, it is difficult to understand the work of the nonprofit sector without a classification system that groups similar charities by purpose, type, or major function. The National Taxonomy of Exempt Entities (NTEE) offers a definitive classification system for nonprofit organizations recognized as tax-exempt under Internal Revenue Code 501(c)(3). The system, developed by the National Center for Charitable Statistics (NCCS), with the guidance of leading nonprofit scholars and practitioners, is used by the Internal Revenue Service to code all new organizations and all the organizations in the annual Statistics of Income (SOI) study sample. It is also used by the NCCS, Independent Sector, the Foundation Center, AAFRC Trust for Philanthropy, and many grantmakers, foundations, researchers, and others working with nonprofit organizations. A description of the structure of the system and a list of the major groups can be found in the Appendix. The complete manual is on the NCCS web site at http:// www.nccs.urban.org.

The Service had originally classified the charities using the Standard Industrial Classification (SIC) system, the standard for all Federal government reporting of economic activity. Because the broad SIC codes were not detailed enough to adequately describe the varied activities of the charities, however, the Service developed its own system of Activity Codes to provide the additional information it needed. The Service later added NTEE codes, the system specifically designed for tax-exempt entities, as it became more widely used within the nonprofit sector.

Two major changes in the classification systems used for charities by the Internal Revenue Service occurred

in 1999. First, the SIC coding system was replaced by the North American Industry Classification System NAICS, created as a result of the North (NAICS). American Free Trade Agreement, was designed to measure all inputs and outputs for the economies of the United States, Canada, and Mexico. Like SIC, its focus is on economic activity; it does not provide for detailed descriptions of nonprofit activities, services, and purposes. In fact, charities classified under NAICS occupy eleven different (two-digit) major Economic Sectors. Of the 200,465 nonprofit organizations that filed IRS Forms 990 in 1996, there were 68,514 (35 percent) classified in the "Other Services" category in NAICS; these nonprofits are mostly human service providers which serve a vital function in the nonprofit sector.

Second, to provide an appropriate level of detail for IRS needs, NCCS redesigned NTEE and created NTEE-Core Codes (NTEE-CC), a streamlined version of the classification system. The new system was developed at the request of the Service (seeking a smaller and more concise coding system) and the research community (seeking a more consistent system with greater intercoder reliability). Its creation eliminated little-used categories, strengthened the hierarchical nature of the system, aligned it closely with the North American Industry Classification System (NAICS), created full definitions for each category, and developed rules for placing an entity with a particular classification.

The new system is now used by the Exempt Organizations/Employee Plans Division of the Service to classify exempt organizations as they apply for tax-exempt status. Since the use of NAICS is required, the Service dropped its Activity Codes. Starting in January 1999, newly-applying organizations receive both an NTEE-CC classification and a NAICS classification. IRS reports will be completed using the NAICS classifications, as required, but the more comprehensive portrait of the sector will also be available using the NTEE-CC codes.

■ Research Questions

With the increasing use of the NTEE-CC by the Service and in the nonprofit sector, NCCS undertook the task of verifying the NTEE code of each record in the 1994 Statistics of Income (SOI) study sample of 501(c)(3) organizations. The resulting study allowed NCCS to:

- test the new NTEE-CC system with a large dataset;
- establish a verified dataset for use by nonprofit researchers; and
- identify common errors in using the system.

Testing NTEE-CC with a Large Dataset

The SOI file is a weighted sample of 10,980 public charities filing Forms 990 and 990-EZ in 1994. It includes all filing organizations with assets over \$10 million (defined as "asset level 7") and a representative sample of all other filing 501(c)(3) organizations, based on asset levels. Though there are other data bases with larger numbers of nonprofit organizations, the SOI file is often used for research, because the data are double-entered and meticulously checked for errors. While the SOI Division and NCCS have participated in a number of studies to check the inter-coder reliability of NTEE codes on the file, no checks of the classifications using outside sources had been completed using such a large or popular dataset.

A test of the new codes and definitions in NTEE-CC, which contains over 475 codes and over 1,000 possible permutations of the 4th digit common code (see Appendix), required a sample file that is large and diverse enough to contain several examples of all available codes and organizations that are large enough to be found in secondary sources like directories of associations and/or web pages. The SOI sample met both criteria.

Creating a Verified Dataset for Research

Verifying the NTEE-CC classifications of organizations in the SOI file was necessary to produce a more

accurate file for the research community. Past efforts to correct classifications have met with limited success, as the only information available to coders was the organization name and the often inaccurate IRS Activity Code, a category that the organization self-selects on Forms 1023 and 1024. At the SOI Division, coders had information from an organization's Form 990, but their classifications were never able to be verified because no one else had wide access to those forms.

In addition, definitions of the NTEE codes themselves were problematic. The NTEE existed for almost 15 years without comprehensive definitions. During that period, rules of thumb proliferated among the organizations and agencies that use the system, with serious consequences for the reliability of the system. For example, during the creation of the NTEE-CC, five practitioners, each with at least three full years of experience with the system, used five separate and distinct definitions for "voluntary health organization."

Another problem area was education and health nonprofits, organizations that constitute a sizable proportion of the SOI sample. Although the definitions of major categories for these types of organizations are clear, very fine distinctions in the descriptions of their purposes or activities may affect their placement in one centile level code versus another. For example, the NTEE-CC now has clear definitions of "hospital system" (E21) and "hospital" (E22), but distinguishing between them in practice is more difficult. Different interpretations could easily shift hundreds of millions of dollars of assets into the wrong category.

The use of secondary sources to verify the classification of SOI records permitted us to test the codes and definitions and thereby improve the reliability of the file.

Identifying Common Errors

The last goal of the study was to permanently improve both the codes and the system for coding for the future, not just for the 1994 SOI sample. The lessons learned while working on the 1994 file were transferred in two ways. First, codes for large organizations that were difficult to classify were hard-coded into future SOI files. For example, the Aeneas Venture

Corporation's Form 990 contains little information useful for accurate classification, but a phone call revealed that it is a supporting foundation of Harvard College. That organization will never have to be researched again, correcting an ongoing error. Second, common pitfalls such as the distinction between a retirement home (L22) and a continuing care facility (P75) were explored during the verification. NCCS has now developed prescriptive rules to increase the accuracy of classification.

■ Methodology

NCCS staff created a data base containing the SOI records and all codes that had been assigned on other files and in other verifications, including a major project funded by the Mellon Foundation. The person completing the verification added a new code and noted the source of information. As much information as possible was appended to the file—down to page numbers of individual directories—so that future researchers could replicate and verify the NCCS work. A total of 42 different research tools, from directories to web pages to other government datasets, were used by the verification team.

The verification consisted of three distinct phases. First, sources such as higher education directories and health directories were used to enhance definitions and test the rules for commonly used codes (such as distinctions between day camps for children and bible camps), as well as verify existing codes. The very largest organizations, more than half of the file, were verified in this manner.

Next, smaller organizations were tracked down in secondary sources. Records were found in such sources as listings of Roman Catholic retirement facilities and museums, the Conservation Directory, and Galenet's *Encyclopedia of Associations*. Almost 90 percent of the organizations in the SOI file were verified within these first two phases.

The remaining 10 percent of organizations included several hundred organizations from asset level 7 that could not be located in directories. For example, the Aeneas Venture Corporation required looking at the zip code and the assets-to-expenses ratio in the SOI file.

The organization appeared to be a foundation in support of Harvard or the Massachusetts Institute of Technology. Eventually, a paper trail led to contact with a person who confirmed its status.

The remainder were small organizations that could not be found, including many without phone numbers and with bad addresses. All had low asset levels, and it is possible that they were not even active four years after the date of the sample. Where no information was available, coders again used the name and NTEE codes assigned by other organizations like Independent Sector and the Foundation Center to check the classification, noting that no additional information could be obtained. For five organizations, the original SOI classification of Z—Unknown was not changed.

All told, the project used 42 different methods of verification. Ten coders spent over 1,000 hours of staff time coding and then rechecking the work.¹

■ General Findings

Intercoder Reliability

In addition to accuracy of codes assigned, it was important that coders working with the same information would apply the same code to a given organization. Reliability among coders working on the project, based on internal checks on work completed, was about 90 percent. The rate approached 100 percent for phase one, over 90 percent for phase two, and just below 80 percent for phase three. As phase three included verification using little or no secondary data, this drop was considered reasonable. In addition, the phase three organizations had few assets, so the impact on the allocation of sector finances was limited. As the historic rate of agreement in classification at the NTEE Major Group level had been 80 percent for the organizations in the whole file, these rates were actually a major achievement and evidence of the improvements in NTEE-CC.

As a further check, the Foundation Center² reviewed NCCS classifications of about 1,250 of the largest organizations in the file. They differed with NCCS on only two percent of the codes. On the basis of this project, NCCS is confident that the new structure of the system

will help coders consistently find the same codes, assuming adequate information is available.

Veracity of Classification

For the first time, notes on the sources of information used for classification and an indication of the confidence level of the code have been recorded in a file. About 81 percent of the file was verified with "high confidence." Confidence levels were assigned according to the amount of information available on a given record. The percentage records grows to 88 percent when organizations classified with "high or fair confidence" are grouped. This is a big achievement for a sector that formally used codes based only on information from one Form 990 or very often just the organization name. For the larger organizations, with assets over \$10 million, NCCS coded 89 percent with "high" and 93 percent with "high or fair confidence." This is the best classified and most completely documented dataset of public charities ever assembled.

Impact on Portrait of Nonprofits

There were few dramatic changes in the portrait of public charities using the newly verified SOI sample. NCCS did verify that the SOI editors were producing quality codes using a system that, at the time, was less than ideal. The changes made in the file have been documented so that the research community can use the file with more confidence than ever before.

Even more importantly, NCCS concluded that the new NTEE-CC system did not radically change the overall profile of the sector. Table 1 details the NTEE breakout of the SOI sample before and after the verification. As one would expect, the two groups which saw the most change in raw numbers were the largest; P—Human Services (195) and E—Health (142). In terms of percentage change, the table shows that the Social Research (52.9 percent) and Civil Rights (33.3 percent) Major Categories saw the most adjustment. These categories, however, tended to describe relatively few organizations having low assets.

Next, we found that the new system of common codes (see Appendix), which is vital for separating rev-

enue streams, is being used with almost zero error. Last, more than a dozen types of common errors were identified. NCCS will emphasize these areas in training sessions and is planning a guidebook on using the NTEE system to accurately classify the sector.

Specific Findings

Relationship between Verified and Original Coding of SOI Sample

Figure 1 illustrates the percentage of codes changed through the verification process for the major groups, and the decile and centile level changes within the major groups, listed by the NTEE major categories (with the exception of "Unknown," which was not included in this analysis). Overall, over 30 percent of the codes at the major group, decile level, or centile level were changed. But the rate of concurrence at the major group level was 81 percent, with agreement approaching 90 percent for the major groups within the major categories of Arts, Education, Environment, and Health. More changes were made in the more detailed decile and centile levels of codes. Other major groups tended to have more changes, particularly International; Public, Societal Benefit; and Religion. Major Group Y-Membership, Mutual Benefit has high and consistent match rates, but only accounted for one percent of the whole sample.

These results are typical of past studies. Organizations in the human services, international, public/societal benefit, and religion categories historically tend to be more difficult to code correctly and consistently, partly because of the very nature of multipurpose charities. For example, the NTEE system is designed to address a number of needs in its classification of organizations that deliver human services. For selecting the correct code for a youth camp that teaches citizenship, a decision must be made about the basis for classification—should it be the services provided by an organization (citizenship education) or the type of organization (camp) or population served (youth)? Should a housing facility for the elderly be classified differently than one for children? With the prescriptive definitions now included in the NTEE-CC, such decisions are no longer up to individual coders, and these organizations will be more consistently coded in the new system.

Changes in Codes by Major Groups

Table 2 shows the differences in the classification groupings of the charities before and after the verification process. While there was little net change in terms of the number of organizations in any one major group as shown by Table 1, hundreds of code changes within the Major Groups were made. The major groups with the highest percentage of changes were Z—Unknown (as NCCS was able to classify all but five organizations); V—Social Service Research Institutes, Services (88.2%); and T—Philanthropy, Voluntarism, and Grantmaking Foundations (90.2%). The number of organizations in each of these major groups is quite small, excepting a large number changed in Major Group T to move public charities described under a code reserved for Private Foundations (T20). The major groups with the greatest number of changes were E-Health-General and Rehabilitative and B-Education, but the changes represented a small percentage of the categories. In these groups, most change occurred in distinguishing between colleges, universities, and support groups; and hospitals, hospital systems, and hospital foundations. These two major groups containing most of the largest nonprofit organizations were, thus, subjected to the greatest scrutiny by the classification team.

The new and more complete definitions in NTEE-CC allowed greater accuracy in coding, particularly in major groups Q through W. Although the classifications of the higher education organizations and health facilities that dominate asset level 7 in the file, accounting for almost 60 percent of the assets reported by all organizations in the unweighted SOI file, were scrutinized carefully and much more accurately defined at the decile and centile levels, there was little net change in the total numbers in those major groups.

Clarification of Elderly Care Classifications

The most significant coding changes came in elderly housing categories described in Table 3. Because of the lack of precise definitions, prior to the creation of NTEE-CC, coders would use a number of classifications for elder care facilities, including E91—Nursing,

Convalescent Facilities; P75—Senior Continuing Care Communities; or L22—Senior Citizens' Housing/Retirement Communities. After the verification and discussion with the SOI editors, NCCS created prescriptive rules for coding that will ensure consistency and accuracy in the future. This accomplishment is significant because current policy developments regarding long-term care for the elderly demand clear accounting of charitable capacity to serve this population.

Changes in Assets by Major Group

The changes in coding, found in Table 4, led to little overall impact in distribution of assets of charities within the major groups. The only large change was in S—Community Improvement, Capacity Building, because one organization with large assets was moved to another group. The outlier is discussed as an issue for further study below.

The fact that the project resulted in little net change is encouraging, as it means the existing SOI file presented a reasonably accurate portrait of the charities' assets. The changes made in the verified file were often subtle, yet add value to the file in the form of robust and definitive codes. Certainly, the confidence level of researchers using the file will be greatly enhanced.

Issues for Discussion and Future Study

Changing the Measure of Classification Quality

When the NTEE (and now NTEE-CC) codes are checked on any given dataset, about 80 percent of the codes will typically match at the major group level. In the past, disagreement at the major group level was used to indicate the quality of the data. It was thought that if the coders cannot even agree on the first level, then more precise classifications were virtually useless. This led to skepticism of the entire NTEE system and, indeed, was a major factor in the creation of NTEE-CC.

The verification project has allowed NCCS to study common major group ambiguity and identify patterns. The vast majority of the differences in classification at the major group level are not gross errors, but differences in shades of meaning. For example, Senior Care facilities might be classified in one of three major groups (E—Health—General and Rehabilitative; L—Housing, Shelter; or P—Human Services—Multipurpose and Other). The classification chosen by any given coder would depend on the description provided of the organization's activities and purposes. Another example is the placement of residential and custodial care organizations, which could be in one of five major groups (F-Mental Health, Crisis Intervention; I-Crime, Legal-Related; J—Employment, Job-Related; L—Housing, Shelter; or P—Human Services— Multipurpose and Other). There is an even finer distinction between voluntary health organizations and services to promote the independence of specific populations, located in major groups G—Diseases, Disorders, Medical Disciplines and P—Human Services—Multipurpose and Other, respectively.

If these types of differences in major groups are not counted as major errors, which of course they are not, inter-coder reliability rises above 90 percent. Because strengthening the hierarchical structure of the system is not an attractive option due to the careful balance of the existing system, NCCS plans a future project to define more useful error measures for coders and data users.

Controlling for Errors

The NCCS analysis of errors in coding found a number of recognizable patterns in the appropriate use of certain codes. This is especially true of Major Group P—Human Services—Multipurpose and Other, rather than more specific major groups like I—Crime, Legal-Related or L—Housing, Shelter.

In addition, errors are more common with major groups Q—International through X—Religion. Through that range of codes, the average agreement rate in the NCCS study was below 50 percent. This rate may be even more problematic as the SOI editors begin to classify organizations tax-exempt under IRC Sections 501(c)(4) through (9) in the 1997 study sample. NCCS will focus on these groups in training and will develop rules to help counter ambiguity. As usage of the NTEE-CC system expands, NCCS will work to devise solutions and publish guides to promote consistent and reliable usage.

Studying Placement of Community Improvement Organizations

Major Group S—Community Improvement, Capacity Building includes community development councils, economic development organizations, trade groups, service clubs, and nonprofit management services. Prior to the verification project, this major group had about \$2 billion in assets, but its new total in the verified file is \$13.8 billion. Much of the change code occurred when the Common Fund for Nonprofit Organizations (with \$10 billion in assets) was moved from Major Group B—Education, as a result of tighter definitions of educational support services. But this dramatic change in assets masked a much more profound change in this group as a whole.

Many small community organizations were reclassified from Major Group S into more specific major groups within human services. At the same time, new definitions of foundations, common codes, and Major Group S itself resulted in very large organizations being added to the group, such as the Common Fund for Nonprofit Organizations and Fidelity Investments Charitable Gift Fund (formerly in Major Group T—Philanthropy, Voluntarism, and Grantmaking Foundations). The change in definitions recognized that smaller community organizations do give grants as well as perform direct service. Likewise, larger organizations like those mentioned above have expanded their foundation roles to include portfolio management and a full range of nonprofit management (S50) services. As a result, Major Group S now includes grantmaking and support organizations not elsewhere defined in Major Group T and the common codes. Examples include Community Development Corporations that are by nature grantmaking but also provide direct service and trade organizations that often hold significant assets for the benefit of for-profit organizations.

Groups that perform services and support other organizations are becoming more prominent with the increased reliance on pass-through and block grants by governments. Future research on these types of organizations might call for disaggregating Major Category VII—Public, Societal Benefit, which currently groups a number of widely varying types of organizations, in-

cluding R—Civil Rights, Social Action, Advocacy; S—Community Improvement, Capacity Building; T—Philanthropy, Voluntarism, and Grantmaking Foundations; U—Science and Technology Research Institutes, Services; V—Social Science Research Institutes, Services; and W—Public, Society Benefit—Multipurpose and Other. Separating these disparate activities into new Major Categories would enhance the quality of research on the sector as a whole.

■ Conclusion

The verification of the classification of organizations in the 1994 Statistics of Income study sample of public charities was a long and difficult process. As a result of that work, NCCS has shown that the new NTEE-CC system is reliable and easier to use for organizational coding than the older version. In addition, the nonprofit research community has a dataset that can be used with increased confidence. Also, future SOI studies will be affected as the benefits of this verification are carried into the next year's sample. Last, NCCS has also been able to identify areas of the system that need more detailed attention for training of coders, and potential areas for future modifications of the system.

The verified SOI file, complete with annotations on the changes and sources of information, is available on the NCCS web site at http/nccs.urban.org, along with NTEE-C manual and complete definitions.

Source: 1994 Statistics of Income Study Sample of Public Charities with NTEE codes adjusted at NCCS. NOTE: The increase in Major Group S is largely attributable to an outlier moved from Education--The Common Fund for Nonprofits.

Appendix—A Brief Guide to the NTEE System *

Designed by a team of experts, the new NTEE-CC includes approximately two-thirds, or about 400, of the 645 categories in the original NTEE. Though the majority of the differences in the NTEE-CC are a result of collapsing lesser-used codes, improvements were also included. With its ease of use and consistent hierarchical logic, the new NTEE-CC will serve as the best instrument for tax-exempt status determination, NAICS linkage, and nonprofit organizational classification.

■ Using the NTEE-CC

The NTEE-CC classification system divides the universe of nonprofit organizations into 26 major groups under 10 broad categories as follows:

		Major Group
I.	Arts, Culture, and Humanities	A
II.	Education	В
III.	Environment and Animals	C, D
IV.	Health	E, F, G, H
V.	Human Services	I, J, K, L, M,
		N, O, P
VI.	International, Foreign Affairs	Q
VII.	Public, Societal Benefit	R, S, T, U, V
		W
VIII.	Religion-Related	X
IX.	Mutual/Membership Benefit	Y
X.	Unknown, Unclassified	\mathbf{Z}

Within the major groups, organizations are broken down according to logical divisions (decile level codes) and subdivisions (centile level codes). Organizations that exist across all or most of the 26 major groups are treated separately and are given what are known as "common codes"

Major Groups (1st Digit)	Alphabetic
Decile Codes (2nd Digit)	Numeric
Centile Codes (3rd Digit)	Alphanumeric
Common Codes (2nd-4th Digit)	Numeric

Major Groups. The major groups represent broad subsectors, such as health, education, and youth devel-

opment, of the charitable organization universe. For descriptions, see the Definitions section.

Decile Codes. Decile codes subdivide organizations in the major groups by specific activity areas, such as Higher Education within the Education major group. See the Definitions section for a full listing of decile codes.

Centile Codes. Centile codes subdivide organizations in the decile codes into specific types of organizations. For example, junior colleges, undergraduate colleges, and universities have separate centile codes within Higher Education (B40). See the Definitions section for a full listing.

Common Codes. Common codes represent activities of organizations, such as research, fundraising, and technical assistance, which are common to all major groups. The seven common codes used are:

- 01 Alliance/Advocacy Organizations
- 02 Management and Technical Assistance
- 03 Professional Societies/Associations
- 05 Research Institutes and/or Public Policy Analysis
- 11 Monetary Support—Single Organization
- 12 Monetary Support—Multiple Organizations
- 19 Nonmonetary Support Not Elsewhere Classified (N.E.C.)

Common codes differ from other codes in that a fourth digit is available. This digit, used within the common code framework, indicates a kind of organization within a group of organizations. For example, B114 would designate college and university fundraising under B11 Monetary Support. The "4" was chosen from the decile level, B40 Higher Education Institutions. Conversely, high school booster clubs would be classified as B112 (B11 Monetary Support—Single Organization plus B20 Elementary, Secondary Education, K-12.)

Another example of coding is classifying the taxexempt "St. Christopher Hospital" as E22; the major group is E for Health, and the decile and centile codes (22) designate a General Hospital. A professional society called "The Learned Society of Landscape Photographers" would be given an NTEE-CC code of A034; the major group is A for Arts, the common code 03 designates the organization as a professional society, and the fourth digit (4) signifies visual arts organizations.

An organization that raises funds for a specific organization, such as a single hospital ("Friends of St. Christopher Hospital"), receives a code of E112; an organization that raises funds for several hospitals ("Friends of Memphis Hospitals") receives a code of E122.

When a coder knows the appropriate major group category for an organization but is not sure of decile or centile designation, the decile and centile codes of 99 should be assigned.

National Taxonomy of Exempt Entities— Core Codes

Summary

A Arts, Culture, and Humanities

- A01 Alliance/Advocacy Organizations
- A02 Management & Technical Assistance
- A03 Professional Societies, Associations
- A05 Research Institutes and/or Public Policy Analysis
- A11 Single Organization Support
- A12 Fundraising and/or Fund Distribution
- A19 Nonmonetary Support N.E.C.**
- A20 Arts, Cultural Organizations—Multipurpose
- A23 Cultural, Ethnic Awareness
- A25 Arts Education
- A26 Arts Council/Agency
- A30 Media, Communications Organizations
- A31 Film, Video
- A32 Television
- A33 Printing, Publishing

- A34 Radio
- A40 Visual Arts Organizations
- A50 Museum, Museum Activities
- A51 Art Museums
- A52 Children's Museums
- A54 History Museums
- A56 Natural History, Natural Science Museums
- A57 Science and Technology Museums
- A60 Performing Arts Organizations
- A61 Performing Arts Centers
- A62 Dance
- A63 Ballet
- A65 Theater
- A68 Music
- A69 Symphony Orchestras
- A6A Opera
- A6B Singing, Choral
- A6C Music Groups, Bands, Ensembles
- A6E Performing Arts Schools
- A70 Humanities Organizations
- A80 Historical Societies, Related Historical Activities
- A84 Commemorative Events
- A90 Arts Service Organizations and Activities
- A99 Arts, Culture, and Humanities N.E.C.

B Education

- B01 Alliance/Advocacy Organizations
- B02 Management and Technical Assistance
- B03 Professional Societies, Associations
- B05 Research Institutes and/or Public Policy Analysis
- **B11** Single Organization Support
- B12 Fundraising and/or Fund Distribution

- B19 Nonmonetary Support N.E.C.
- B20 Elementary, Secondary Education, K 12
- B21 Kindergarten, Preschool, Nursery School, Early Admissions
- B24 Primary, Elementary Schools
- B25 Secondary, High School
- **B28** Specialized Education Institutions
- B30 Vocational, Technical Schools
- **B40** Higher Education Institutions
- **B41** Community or Junior Colleges
- B42 Undergraduate College (4-year)
- B43 University or Technological Institute
- B50 Graduate, Professional Schools (Separate Entities)
- B60 Adult, Continuing Education
- B70 Libraries
- B80 Student Services, Organizations of Students
- B82 Scholarships, Student Financial Aid Services, Awards
- B83 Student Sororities, Fraternities
- B84 Alumni Associations
- B90 Educational Services and Schools—Other
- B92 Remedial Reading, Reading Encouragement
- B94 Parent/Teacher Group
- B99 Education N.E.C.

C Environmental Quality, Protection, and Beau tification

- C01 Alliance/Advocacy Organizations
- C02 Management and Technical Assistance
- C03 Professional Societies, Associations
- C05 Research Institutes and/or Public Policy Analysis
- C11 Single Organization Support
- C12 Fundraising and/or Fund Distribution

- C19 Nonmonetary Support N.E.C.

SOI Sampling Methodology and Data Limitations

Appendix

his appendix discusses typical sampling procedures used in most Statistics of Income (SOI) programs. Aspects covered briefly include sampling criteria, selection techniques, methods of estimation, and sampling variability. Some of the nonsampling error limitations of the data are also described, as well as the tabular conventions employed.

Additional information on sample design and data limitations for specific SOI studies can be found in the separate SOI reports (see pages 263-265 at the end of this *Bulletin*). More technical information is available, on request, by writing to the Acting Director, Statistics of Income Division N:ADC:R:S, Internal Revenue Service, P.O. Box 2608, Washington, DC 20013-2608.

Sample Criteria and Selection of Returns

Statistics compiled for the SOI studies are generally based on stratified probability samples of income tax returns or other forms filed with the Internal Revenue Service (IRS). The statistics do not reflect any changes made by the taxpayer through an amended return or by the IRS as a result of an audit. As returns are filed and processed for tax purposes, they are assigned to sampling classes (strata) based on such criteria as: industry, presence or absence of a tax form or schedule, accounting period, State from which filed, and various income factors or other measures of economic size (total assets, for example, is among the criteria used for the corporation and partnership statistics). The samples are selected from each stratum over the appropriate filing periods. Thus, sample selection can continue for a given study for several calendar years—3 for corporations because of the incidence of fiscal (non-calendar) year reporting and extensions of filing time. Because sampling must take place before the population size is known precisely, the rates of sample selection within each stratum are fixed. This means, in practice, that both the population and the sample size can differ from those planned. However, these factors do not compromise the validity of the estimates.

The probability of a return being designated depends on its sample class or stratum and may range from a fraction of 1 percent to 100 percent. Considerations in determining the selection probability for each stratum include

Information for this appendix was compiled under the direction of Beth Kilss, Chief, Statistical Data Section, Special Studies Branch. Major contributions were made by Paul McMahon, Statistical Computing Branch, and Robert Wilson, private contractor.

the number of returns in the stratum, the diversity of returns in the stratum, and interest in the stratum as a separate subject of study. All this is subject to constraints based on the estimated processing costs or the target size of the total sample for the program.

For most SOI studies, returns are designated by computer from the IRS Master Files based on the taxpayer identification number (TIN), which is either the Social Security number (SSN) or the Employer Identification Number (EIN). A fixed and essentially random number is associated with each possible TIN. If that random number falls into a range of numbers specified for a return's sample stratum, then it is selected and processed for the study. Otherwise, it is counted (for estimation purposes), but not selected. In some cases, the TIN is used directly by matching specified digits of it against a predetermined list for the sample stratum. A match is required for designation.

Under either method of selection, the TIN's designated from one year's sample are, for the most part, selected for the next year's, so that a very high proportion of the returns selected in the current year's sample are from taxpayers whose previous years' returns were included in earlier samples. This longitudinal character of the sample design improves the estimates of change from one year to the next.

Method of Estimation

As noted above, the probability with which a return is selected for inclusion in a sample depends on the sampling rate prescribed for the stratum in which it is classified. "Weights" are, in general, computed by dividing the count of returns filed for a given stratum by the count of sample returns for that same stratum. Weights are used to adjust for the various sampling rates used, relative to the population—the lower the rate, the larger the weight.

For some studies, it is possible to improve the estimates by subdividing the original sampling classes into

"post-strata," based on additional criteria or refinements of those used in the original stratification. Weights are then computed for these post-strata using additional population counts. The data on each sample return in a stratum are then multiplied by that weight. To produce the tabulated

Sample returns are designated by computer from the IRS Master Files based on the taxpayer identification number.

SOI Sampling Methodology and Data Limitations

estimates, the weighted data are summed to produce the published statistical totals.

In transcribing and tabulating data from tax returns, checks are imposed to improve the quality of the statistics.

Sampling Variability

The particular sample used in a study is only one of a large number of possible random samples that could have been selected using the same sample design. Estimates derived from the different samples usually vary. The standard error of the estimate is a measure of the variation among the estimates

from all possible samples and is used to measure the precision with which an estimate from a particular sample approximates the average result of the possible samples. The sample estimate and an estimate of its standard error permit the construction of interval estimates with prescribed confidence that this interval includes the actual population value.

In SOI reports, the standard error is not directly presented. Instead, the ratio of the standard error to the estimate itself is presented in percentage form. This ratio is called the coefficient of variation (CV). The user of SOI data may multiply an estimate by its CV to recreate the standard error and to construct confidence intervals.

For example, if a sample estimate of 150,000 returns is known to have a coefficient of variation of 2 percent, then the following arithmetic procedure would be followed to construct a 68-percent confidence interval estimate:

150,000	(sample estimate)
x0.02	(coefficient of variation)
=3,000	(standard error of estimate)
then:	
150,000	(sample estimate)
+ or - 3,000	(standard error)
= {147,000,153,000}	(68-percent confidence interval).

Based on these data, the interval estimate is from 147 to 153 thousand returns. This means that the average estimate of the number of returns lies within an interval computed in this way. Such an estimate would be correct for approximately two-thirds of all possible samples similarly selected. To obtain this interval estimate with 95-percent

confidence, the standard error should be multiplied by 2 before adding to and subtracting from the sample estimate. (In this particular case, the resulting interval would be from 144 to 156 thousand returns.)

Further details concerning sample design, sample selection, estimation method, and sampling variability for a particular SOI study may be obtained, on request, by writing to the Acting Director, Statistics of Income Division, at the address given above.

Nonsampling Error Controls and Limitations

Although the previous discussion focuses on sampling methods and the limitations of the data caused by sampling error, there are other sources of error that may be significant in evaluating the usefulness of SOI data. These include taxpayer reporting errors and inconsistencies, processing errors, and the effects of any early cutoff of sampling. Additional information on nonsampling error as it applies to individual and corporation income tax returns is presented in the separate SOI reports on these returns.

In transcribing and tabulating the information from returns or forms selected for the sample, steps are taken to improve the quality of the resultant estimates. Tax return data may be disaggregated or recombined during the statistical abstracting and "editing" process that takes place in IRS submission processing centers. This is done to improve data consistency from return to return and to achieve definitions of the data items more in keeping with the needs of major users. In some cases, not all of the data are available from the tax return as originally filed. Sometimes, the missing data can be obtained by the Statistics of Income Division in Washington, DC, through field followup. More often, though, they are obtained through manual or computerized imputation. For this purpose, other information in the return or in accompanying schedules may be sufficient to serve as the basis for making an estimate. Prior-year data for the same taxpayer can be used for this same purpose; or comparable data from business reference books may be substituted.

Data abstracted or "edited" from returns for statistical use are subjected to a number of validation checks, including systematic verifications of a sampling of the work of each tax examiner involved in the SOI process. Data reported on sampled returns and previously transcribed as part of processing for the IRS Master Files are subject to

SOI Sampling Methodology and Data Limitations

validation as part of the administrative process before SOI processing begins. However, during the administrative process, it is only practical to transcribe corrections to errors that have a direct bearing on the tax reported or the refund claimed. Therefore, during the SOI process, checks must also be made to correct any errors or inconsistencies left in the administrative data before the data can be accepted for the statistics.

The Statistics of Income program includes many more tax return items than are transcribed and perfected for IRS tax administration needs, especially for items reported in tax return schedules in support of the various summary totals reported on the return. Therefore, checks must also be designed to validate these additional data items and to assure that they are consistent with other data entries.

Most of the data validation checks made during the SOI process take the form of computerized tests of each record. In addition to verifying that internal consistency and proper balance and relationships among the tax return items and statistical classifications are maintained, this process is intended to check on consistency with tax law provisions, acceptable reporting practices, and generally accepted accounting principles. Most testing occurs during the data abstracting and editing operation, while the tax return source document is still on hand, although some testing for certain programs occurs later on. Records failing the tests are subjected to further review and correction.

Finally, before publication, the statistics are reviewed for accuracy and reasonableness in light of the tax law provisions, taxpayer reporting variations and other limitations, tolerances and statistical techniques allowed or employed in data processing and estimating, economic conditions, and comparability with other statistical series. However, these controls do not completely eliminate the possibility of error. When discovered, errors in *Bulletin* tables are corrected through published errata.

Table Conventions

Published estimates subject to excessive sampling variability are identified for most of the statistics by means of an asterisk (*) presented alongside the estimate or in place of an estimate. Presence of an asterisk means that the sampling rate was less than 100 percent of the population and that there were fewer than 10 sample observations available for estimation purposes. This method produces a rough indication of excessive sampling variability. However, the results will differ somewhat from more precise indicators of excessive sampling variability based on the standard statistical formula. For some of the statistics based on samples, asterisking was not possible because of resource and other constraints. Users should keep this limitation in mind when using these data.

A dash, in place of a frequency or an amount, in any given table cell presenting data based on an SOI sample, indicates either that (1) there were no returns in the population with the particular characteristic, or (2) because of its rarity, instances of the characteristic were not present among the sampled returns. However, for statistics based on returns selected for the sample at the 100-percent rate, a dash indicates a presumption of no returns with the particular characteristic in the population.

In addition to sampling variability, Statistics of Income is required to prevent disclosure of information about specific taxpayers or businesses in its tables. Therefore, a weighted frequency (and the associated amount, where applicable) of less than 3 is either combined with data in an adjacent cell(s) so as to meet the criteria, or deleted altogether. Similar steps are taken to prevent indirect disclosure through subtraction. However, any combined or deleted data are included in the appropriate totals. Most data on tax-exempt, nonprofit organizations are excluded from disclosure review because the Internal Revenue Code and regulations permit public access to most of the information reported by these organizations.

General Statistical Information	n: (202) 874-0410 Fa	ıx: (202) 874-0964 e-mail: sis@irs.gov
Planned Projects, Year*	Primary Analysts	Frequency and Program Content
Americans Living Abroad: 1996 Program 2001 Program	Jeff Curry Maureen Keenan Kahr	This periodic study is conducted every 5 years. It covers foreign income, foreign taxes paid, and foreign tax credit shown on individual income tax returns. Data are classified by size of adjusted gross income and country.
Controlled Foreign Corporations: 1998 Program 1999 Program	John Comisky Susan Daly Randy Miller Jason Wenrich	This annual study provides data on activities of foreign corporations that are controlled by U.S. corporations. Data are classified by industry group and country.
Corporation Foreign Tax Credit: 1998 Program 1999 Program	Scott Luttrell Chris Carson Kathryn Green	This annual study provides data on foreign income, taxes paid, and foreign tax credit reported on corporation foreign income tax returns. Data are classified by industry group and country.
Corporation Income Tax Returns: 1998 Program 1999 Program 2000 Program	Nina Shumofsky Rob Blackwell Janice Washington Glenn Hentz Ellen Legel George Contos Lucy Altounian	Basic data are produced annually and cover complete income statement, balance sheet, tax, tax credits, and details from supporting schedules. Data are classified chiefly by industry group or asset size.
Estate Tax: 1998-2000 Program	Barry Johnson Darien Berkowitz Jacob Mikow	This annual study includes information on gross estate and its composition, deductions, and tax; and information on the age, sex, and marital status of decedents. Basic estate tax return data by year in which returns are filed are produced each year. Also included are data on nonresident aliens who had more than \$60,000 of assets in the United States. Other statistics are available on a year-of-death basis (approximately every 3 years). The most recent study is based on decedents who died in 1995 with returns filed in 1995-1997.
Excise Taxes	Brian Francis	Basic data are collected and processed by three Department of the Treasury agencies: the Internal Revenue Service, the Bureau of Alcohol, Tobacco and Firearms, and the Customs Service. Data by type of tax are shown by Fiscal Year for 1994-1999, and quarterly for 2000 and the first two quarters of 2001.
Exempt Organizations (Charitable and Other, Except Private Founda 1998 Program 1999 Program	rions): Paul Arnsberger	This annual study includes balance sheet and income statement data for organizations classified as tax-exempt under subsections 501(c)(3)-(9) of the Internal Revenue Code. The most recent study is for Tax Year 1998.

Planned Projects, Year*	Primary Analysts	Frequency and Program Content
Exempt Organizations (Private Foundations): 1997 Program 1998 Program	Melissa Whitten	This annual study includes balance sheet and income statement data for private foundations and charitable trusts filing a Form 990-PF. The most recent study is for Tax Year 1997.
Exempt Organizations Unrelated Business Income: 1997 Program 1998 Program	Peggy Riley	This annual study includes tabulations of "unrelated business" income and deductions for organizations classified as tax-exempt under the Internal Revenue Code. The most recent study is for Tax Year 1997.
Foreign-Controlled Domestic Cor 1999 Program	porations: James Hobbs	This annual study covers domestic corporations with 50-percent-or-more stock ownership by a single foreign "person." It covers balance sheet, income statement, and tax-related data, which are classified by industry group, country, and size and age of the corporations. Data are compared to those for other domestic corporations.
Foreign Recipients of U.S. Incom 1998 Program	Scott Luttrell	This annual study provides data by country on income paid to nonresident aliens and the amount of tax withheld for the U.S. Government.
Foreign Sales Corporations (FSC) 1996 Program 2000 Program	Dan Holik Cynthia Belmonte Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987, and then on a 4-year cycle after 1992.
Foreign Trusts: 1998 Program	Dan Holik Cynthia Belmonte	This periodic study, conducted every 4 years, provides data on foreign trusts that have U.S. "persons" as grantors, transferors, or beneficiaries. Data include country where the trust was created, value of transfer to the trust, and year the trust was created.
Gift Tax: 1998 Program	Martha Eller Darien Berkowitz	This first-time study will provide retrospective data for prior years for filers of 1998 returns; all post-1976 gifts will be recorded. Data cover type and amount of gift; information on donee; and tax computation items.
Individual Income Tax Return Public-Use File	Mario Fernandez Mike Weber	Record-by-record data on CD-ROM's, magnetic tape files, or cartridges, produced annually, contain detailed information obtained from the individual income tax return statistics program, with identifiable taxpayer information omitted to make the file available for public dissemination on a reimbursable basis.

General Statistical Information: (202) 874-0410 Fax: (202) 874-0964 e-mail: sis@irs.gov			
Planned Projects, Year*	Primary Analysts	Frequency and Program Content	
Individual Income Tax Returns: 1998 Program 1999 Program 2000 Program 2001 Program	Maureen Keenan Kahr Jeff Curry Mike Strudler	Basic data are produced annually and cover income, deductions, tax, and credits reported on individual income tax returns and associated schedules. Data are classified by size of adjusted gross income, marital status, or type of tax computation.	
Individual Income Tax Returns Special Tabulations: Individuals Sole Proprietorships	Mike Weber Mario Fernandez	Special tabulations of selected individual income, deduction, and tax data are produced on a reimbursable basis.	
Interest-Charge Domestic International Sales Corporations (IC-DISC): 2000 Program	Dan Holik	These corporations replaced the Domestic International Sales Corporation, or DISC, as of 1985. Balance sheet, income statement, and export-related data are tabulated annually through 1987; thereafter, on a 4-year cycle.	
International Boycott Participatio 1999 Program	On: Susan Daly	This study provides data on business operations of U.S. "persons" in boycotting countries, as well as the requests and agreements to participate in, or cooperate with, international boycotts not sanctioned by the U.S. Government.	
Migration Flow and County Income Data	Emily Gross	Migration flow data (based on year-to-year changes in individual income tax return addresses) and county or State income data are available annually on a reimbursable basis. The most recent data are for 1999-2000.	
Occupation Studies	Terry Nuriddin	This periodic study classifies individual income tax returns by occupation and contains a dictionary of occupational titles that can be used to enhance the economic data of other individual income tax return studies.	
Partnership Returns of Income	Tim Wheeler Bill Pratt	Basic data, produced annually, cover income statement, balance sheet, and details from supporting schedules. Data are classified chiefly by industry group.	
Partnership Withholding Study: 1998 Program	Chris Carson	This annual study includes data on U.S. partnership payments to foreign partners. Data are classified by country and recipient type.	
Personal Wealth Study: 1995 Program	Barry Johnson	This periodic study provides estimates of personal wealth of top wealth holders that are generated from estate tax return data using the "estate multiplier" technique, in conjunction with both filing-year and year-of-death estate data bases. The most recent data (1995) are based on returns filed from 1995 to 1997.

Planned Projects, Year*	Primary Analysts	Frequency and Program Content		
S Corporations	Kelly Bennett Cheryl Flango	Annual study data are collected for the income statement and balance sheet, and from supporting schedules. Data are classified by industry group or asset size.		
Sales of Capital Assets: 1998 Program 1999 Program 2000 Program	Janette Wilson	This periodic study provides detailed data on the sales of capital assets reported in the capital gains schedule of the individual income tax return, and on sales of residences and personal or depreciable business property.		
Sales of U.S. Real Property Interest by Foreign Persons: 1998 Program	Chris Carson	This annual study provides data on transfers of U.S. real property interests acquired from foreign "persons." Data include the amount realized on transfers, U.S. tax withheld, and countries of foreign persons.		
Sole Proprietorships: 1998 Program 1999 Program 2000 Program	Maureen Keenan Kahr Jeff Curry Mike Strudler	Basic data, produced annually, cover business receipts, deductions, and net income reported on Schedule C (for nonfarm proprietors), classified by industry group.		
Split-Interest Trust Information Return: 1998 Program 1999 Program	Melissa Belvedere	This first-time study provides information on charitable remainder trusts only. Data include balance sheet, income, deductions, and detail from accumulation and distribution schedules. The most recent study is for Tax Year 1998.		
Tax-Exempt Bond Issues: 1997 Program 1998 Program	Marvin Schwartz	This annual study provides information on private activity and governmental bond issues by type of property financed, size of face amount, and State. The most recent studies are 1997 for public purpose bonds and for private activity bonds.		
Taxpayer Usage Study:	Mike Weber	Produced annually, this program provides weekly frequencies of specific line entries made by taxpayers, the use of various return schedules and associated forms, and general characteristics of the individual taxpayer population, for returns received during the primary filing season (January through April).		
Transactions of Foreign Controlle Corporations: 2000 Program	d Heather Duffy	This biennial study includes data on transactions between U.S. corporations and their foreign owners. Data are classified by country and industry group.

Products for Sale From SOI

Many of SOI's data files are available for sale on CD-ROM, diskette, tape, or via e-mail through the Statistical Information Services Office. **Prepayment is required for orders of \$100 or more**, with checks made payable to the **IRS Accounting Section.** Contact SIS for information on specific products, prices, sources, media, and ordering instructions.

The following files are currently available on a reimbursable basis and include data from returns covering corporations, individuals, exempt organizations, and private foundations and charitable trusts. Most of these files are tabulations of aggregated data, but some are files of microdata records.

Corporation Income Tax Returns

Corporation Source Book

A magnetic tape, PC-diskettes, or CD-ROM containing the tabular statistics from the *Corporation Source Book*,

1998. Price is \$1,500. (See also Printed Publications section below.)

Individual Income Tax Returns

Individual Public-Use Microdata Files

These files include individual income tax returns for 1960, 1962, 1964, and 1966-1996. All of the files have been edited to protect the confidentiality of individual taxpayers. Public-use files of individual income tax returns for 1960, 1962, 1964, and 1966-1991 are available for sale by writing to the Center for Electronic Records (NNX) at the National Archives and Records Administration, Washington, DC 20408, or by calling (301) 713-6630. Files for 1992 through 1996 are available on CD-ROM from the SOI Division. Price for the 1996 SOI file is \$3,300 per year.

Individual Nonpublic-Use Microdata Files

These files include individual income tax returns for 1960-1998. They are available to the State tax authorities for \$4,000 per year per State. They contain identifiable data.

County-to-County Migration Data

One table, based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. This table presents data on migration patterns by county for the entire United States, including inflows and outflows. The data include the number of returns (which can be used to approximate the number of households), the number of personal exemptions (which can be used to approximate the population), total "adjusted gross income" (starting with 1995-1996), "median adjusted gross income" (starting with 1995-1996), total money income (for years 1992-1993 through 1995-1996), and median total money income (for years 1992-1993 through 1995-1996). Available for 1984-2000. Price is \$200 per year for the entire United States or \$10 per State per year. (All years for the entire United States are also available for \$500.)

State-to-State Migration Data

One table, based on the year-to-year changes in the addresses shown on the population of returns from the IRS Individual Master File system. This table presents data on migration patterns by State for the entire United States, including inflows and outflows. The data include the number of returns (which can be used to approximate the number of households), the number of personal exemptions (which can be used to approximate the population), total "adjusted gross income" (starting with 1995-1996), "median adjusted gross income" (starting with 1995-1996), total money income (for years 1992-1993 through 1995-

1996), and median total money income (for years 1992-1993 through 1995-1996). Available for 1989-2000. Price is \$50 per year for the entire United States or \$5 per State per year.

County Income Data

One table, based on the population of returns from the IRS Individual Master File system. This table presents data for total "money income," adjusted gross income (total and for selected sources), number of returns (which can be used to approximate the number of households), and number of personal exemptions (which can be used to approximate the population). The data are presented by county (including State totals). Available for 1989-1999 for the entire United States. Price is \$50 per year for the entire United States or \$5 per State per year.

ZIP Code Area Data

Statistics are available for Income Year 1997 and 1998 on CD-ROM showing the number of individual income tax returns; the number of personal exemptions (which can be used to approximate population); adjusted gross income; salaries and wages; taxable interest; earned income credit; total tax; number of returns with Schedules C and F and number of Schedules C and F; and number of returns with a Schedule A and amount of Schedule A deductions, by State and 5-digit ZIP code. Price is \$500 for the entire United States; \$25 for a single State. (Data for Income Year 1991 are available free on SOI's internet site: www.irs.gov/tax stats.)

Tax-Exempt Organizations

Microdata Records for Reporting Year 1998

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 9,795 Internal Revenue Code section 501(c)(3) organizations and 14,653 section 501(c)(4)-(9) organizations. Sampling rates ranged from 1 percent for small-asset classes to 100 percent for large-asset classes (i.e., those with assets \$30,000,000 or more). Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Price is \$300.

Microdata Records for Reporting Year 1997

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 13,516 Internal Revenue Code section 501(c)(3) organizations and 9,377 section 501(c)(4)-(9) organizations. Sampling rates ranged from 1 percent for small-asset classes to 100 percent for large-asset classes (i.e., those with assets \$30,000,000 or more). Microdata

records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each organization. Price is \$100.

Microdata Records for Reporting Year 1996

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The sample includes 12,674 Internal Revenue Code section 501 (c)(3) organizations. Sampling rates ranged from less than 1 percent for small-asset classes to 100 percent for large-asset classes (i.e., those with assets \$10,000,000 or more). Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each exempt organization. Price is \$100.

Microdata Records for Reporting Year 1995

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 11,600 Internal Revenue Code section 501 (c)(3) organizations and over 8,800 section 501 (c)(4)-(9) organizations. Sampling rates ranged from less than 1 percent for small-asset classes to 100 percent for large-asset classes (i.e., those with assets \$10,000,000 or more). Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each exempt organization. Price is \$100.

Microdata Records for Reporting Year 1994

Microdata records of all Forms 990 and 990-EZ sampled for the annual SOI study of tax-exempt organizations. The samples include 11,100 Internal Revenue Code section 501 (c)(3) organizations and over 8,500 section 501 (c)(4)-(9) organizations. Sampling rates ranged from less than 1 percent for small-asset classes to 100 percent for large-asset classes (i.e., those with assets \$10,000,000 or more). Microdata records contain information on balance sheets and income statements, as well as weights (to estimate the population), for each exempt organization. Price is \$100.

Private Foundations (and Charitable Trusts)

Microdata Records for Reporting Year 1998

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes approximately 8,600 returns. Sampling rates ranged from 0.6 percent for small-asset classes to 100 percent for large-asset classes. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Price is \$300.

Microdata Records for Reporting Year 1997

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes approximately 8,300 returns. Sampling rates ranged from 2 percent for small-asset classes to 100 percent for large-asset classes. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Price is \$200.

Microdata Records for Reporting Year 1996

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes approximately 7,500 returns. Sampling rates ranged from 2 percent for small-asset classes to 100 percent for large-asset classes. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Price is \$50.

Microdata Records for Reporting Year 1995

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts. The sample includes approximately 6,400 returns. Sampling rates ranged from 3 percent for small-asset classes to 100 percent for large-asset classes. Microdata records contain information on revenue, expenses, assets, and distributions, as well as weights, for each foundation or trust. Price is \$50.

Microdata Records for Reporting Year 1994

Microdata records of all Forms 990-PF sampled for the annual SOI study covering private foundations and Internal Revenue Code section 4947 (a)(1) charitable trusts. The file contains both operating and nonoperating foundations and trusts and includes over 51,500 returns, which represent virtually all of the 1994 PF returns filed and processed through early May 1998. Microdata records contain information on revenue, expenses, assets, and distributions for each foundation or trust. Price is \$50.

Printed Publications

Publications Available for Sale From GPO

Recent SOI publications are available from the Superinten-

dent of Documents, U.S. Government Printing Office, Washington, DC, by calling (202) 512-1800 or faxing (202) 512-2250. (Credit cards are accepted.) Publications may also be obtained by using the order form at the end of this *Bulletin* or write to:

Superintendent of Documents

P.O.Box 371954 Pittsburgh, PA 15250-7954.

If you determine from the Government Printing Office that any of the next four items is out of print, please telephone the Statistical Information Services Office on (202) 874-0410 for assistance.

IRS Data Book 2000

Annually, Publication 55B, Stock No. 048-004-02448-9 Price: \$7

This volume pertains to Fiscal Year 2000--October 1, 1999, through September 30, 2000. The report provides data on collecting the revenue, enforcing the law, assisting the taxpayer, and managing the system, as well as lists and a chart about the structure and administration of the IRS itself.

Statistics of Income (SOI) Bulletin

Quarterly, Publication 1136, Stock No. 748-005-00000-5 Subscription price: \$41; Single copy price: \$34

This series provides the earliest published financial statistics from individual and corporation income tax returns. The *Bulletin* also includes annual data on nonfarm sole proprietorships and partnerships, as well as from periodic or special studies of particular interest to tax analysts, administrators, and economists. Historical tables include data from SOI, as well as on tax collections and refunds by type of tax.

Statistics of Income--1998, Corporation Income Tax Returns

Publication 16, Stock No. 048-004-02450-1

Price: \$42

This report presents more comprehensive data on corporation income tax returns with accounting periods that ended July 1998 through June 1999 than those published earlier in the *SOI Bulletin*. This is the first version using the North American Industry Classification System (NAICS), which replaces the Standard Industrial Classification (SIC) system used in prior years.

Presents information on:

- receipts;
- deductions;
- net income;
- taxable income;
- incometax;
- tax credits;
- assets; and
- liabilities.

Classifies data by:

- industry;
- accounting period;
- size of total assets;
- size of business receipts; and
- size of income tax after credits.

Statistics of Income--1998, Individual Income Tax Returns

Publication 1304, Stock No. 048-004-02443-8 Price: \$21

This report presents more comprehensive and complete data on individual income tax returns for 1998 than those published earlier in the *SOI Bulletin*.

Presents information on:

- sources of income;
- exemptions;
- itemized deductions; and
- tax computations.

Classifies data by:

- size of adjusted gross income;
- marital status; and
- type of tax computation.

Publications Available From SOI

Other SOI periodicals and one-time reports are available for sale from the Statistical Information Services Office. These reports include data from returns covering corporations, exempt organizations, international income and taxes, and estate taxes. The report from the IRS methodology reports series is available free while supplies last.

Corporation Source Book, 1998

Publication 1053--Price: \$175, plus \$10 for shipping and handling

Starting in 1998, industry detail is based on the North American Industry Classification System (NAICS). In previous years the Standard Industrial Classification (SIC) system was used to classify the data. This 633-page document presents detailed income statement, balance sheet, tax, and selected items, by division, sector, major and minor industrial groups, and size of total assets for all returns and separately for returns with net income. Separate statistics on S corporations are included by industry division and sector. The report, which underlies the *Statistics of Income--Corporation Income Tax Returns* publi-

cation, is part of an annual series and can be purchased in its entirety or by page. *Corporation Source Book* industry pages and notes for 1963 through present are available at a cost of \$30, plus \$1 per page copying charge (free for orders under 5 pages). The *Source Book* for 1989 are for sale at \$175 per year, plus \$10 for shipping and handling.

Compendium of Federal Estate Tax and Personal Wealth Studies

Publication 1773--Price: \$26, plus \$10 for shipping and handling

Part I of this report focuses on data from estate tax returns, describing decedents, their beneficiaries, and the composition of their estates. It contains a methodological discussion of the strategy used in weighting sample data for the estate studies and presents statistics on selected components of decedents' estates, 1916-1990. Information on charitable giving is also included.

Part II presents a series of articles describing the estate-multiplier technique and its applications for personal wealth estimates, estimates of personal wealth for selected years 1962-1989, and a discussion of the relationship among realized income, wealth, and well-being.

Turning Administrative Systems Into Information Systems--1999

Publication 1299--No charge

This is the seventh volume in the current IRS methodology reports series, which documents statistical uses of administrative records in SOI programs. (The series previously released 10 volumes under the title *Statistics of Income and Related Administrative Record Research.*) This year's compilation has been divided into six major sections, each focusing on a somewhat different area of research:

- analyses of administrative records from the U.S. tax system;
- statistical uses of administrative records;
- employee satisfaction and customer satisfaction sur-

veys at the IRS;

- an update on the Survey of Consumer Finances;
- analysis of structured date; and
- distributional theory and computation.

Other SOI Products and Services for Sale

Other SOI products and services are available for sale in other than electronic formats or printed publications.

County-to-County Migration Data

Compilations are available showing migration patterns, from where to where, by county, based on year-to-year changes in the individual income tax return address. Selected data are available (according to the years in which the returns were filed) for all years between 1984 and 2000 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years between 1978 and 2000 at \$5 per county (for inflows) and \$5 per county (for outflows).

See also Electronic Products and Services section.

State-to-State Migration Data

Compilations are available showing migration patterns, from where to where, by State, based on year-to-year changes in the individual income tax return address. Selected data are available (according to the years in which the returns were filed) for all years between 1989 and 2000 and include counts of the number of returns and the number of personal exemptions (which can be used to approximate population). Tabulations are available as hard copy for all years between 1986 and 2000 at \$5 per State (for inflows) and \$5 per State (for outflows).

See also Electronic Products and Services section.

County Income Data

Tables present adjusted gross income by source and number of personal exemptions (which can be used to approximate population) reported on individual income tax returns for Income Years 1989 through 1999. Data are also available as hard copy for all years between 1988 and 1999 at \$5 per State.
